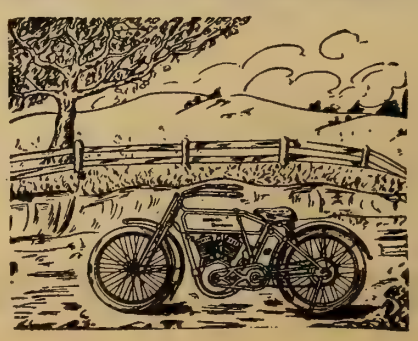
Be sure to send your name and address so I can tell you all about the contest in which you can win a $285 Motorcycle and many other prizes.

1500 Votes Free I will send you a special coupon good for 1500 votes toward the motorcycle. All you have to do to get this coupon is to send your name and address at once.

A. M. PIPER, 200 Popular Bldg., Des Moines, Iowa

Puzzle: Can You Find the Rider?



LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

SPECIFIC PERFORMANCE OF CONTRACTS.

Where a contract is made for the purchase or sale of personal property, or concerning it, and one of the parties fails or refuses to comply with the contract, the other party cannot, as a general rule, compel the enforcement of it by law. His only remedy is to bring a suit for damages for the breach of the contract, In nearly all contracts about personal property, the question is only one of price or pecuniary value, and the payment of damages in money by the party who violates the contract will adequately compensate the other party, but where a person has purchased real property, and seeks the aid of a court to obtain it, the law presumes that he bought it for some reason besides its mere pecuniary value, perhaps for a residence or cultivation, and deemed it worth more to him than the price it would bring in the market, and money damages would not fully compensate him for the loss of it, because damages are always measured by actual marketable value. Therefore courts will enforce contracts for the sale of real estate, by decrees of specific performance. As a general rule, contracts for the sale of real estate must be made in writing and signed by the parties, in order to be binding upon them, and capable of being enforced by such decrees. Under some circumstances, however, verbal contracts for the sale of real estate will be enforced by courts of equity. Where a party to such a contract refuses to comply with it, and it is apparent to the court that a judgment at law against him for damages will not be a complete and adequate remedy to the other party, the court will exercise its equitable jurisdiction, and decree a specific performance of the contract. In such a case something besides the mere verbal contract must be proved—some circumstances which will show that by reason of such contract, one of the parties has been placed in a position where he will sustain loss and wrong unless the contract be carried out. For instance, suppose a person should make a verbal contract for the purchase of land, for a home, or for business purposes and pay part of the price, and take possession under the contract, and erect buildings and make other permanent improvements for the purpose for which he purchased it, and after all this the seller refuses to complete the contract. In such case the buyer is in a position where he is liable to suffer great loss and wrong, and he can, therefore, invoke the power of a court in equity by a petition for specific performance of verbal contract, because having relied upon it, he partially performed the contract on his part, and has no other adequate remedy, and the court will render a decree directing the other party to carry out his part of the contract. The right to relief in such a case rests not upon the contract alone, but also upon what has been done by the complaining party in pursuance of the contract. This is the general rule. In Iowa, however, the statute provides that acceptance of the purchase price, or a part thereof, by the seller of land, shall make a verbal contract of sale, binding.

LAW QUESTIONS CONSIDERED

DISCHARGE FROM INDUSTRIAL SCHOOL.

A subscriber, Marshalltown, Iowa.—(1) When does a girl become of legal age in Iowa? (2) A girl nearly nineteen years old is in the industrial school in Iowa. When and how can she be discharged therefrom?

Answer.—(1) When she is eighteen years old. (2) The girl is committed to the industrial school till she is twenty-one years old. The law provides that the board of control of state institutions may at any time after the girl has been there for one year, order her to be discharged or paroled as a reward for good conduct, and the board may, without regard to one year's service, or her conduct, order her discharge for urgent and sufficient reasons. Also, the superintendent of the school may, with the approval in writing of the board of control, place the girl with any person or family of good character, under an agreement in writing with them to properly care for her and educate her, for such time as may be fixed in such agreement. There is no other way by which the girl can lawfully leave the school till she is twenty-one years old.

PRIVATE ROAD—PRESCRIPTION TEN YEARS.

An Iowa Subscriber.—The public road by R's farm was quite a distance from his house, and about ten years ago he built at his own expense a private road, from the public road past his house, and joining the public road again further on. All this private road was on R's land except a few rods that crossed the corner of an adjoining ten acre lot owned by K. Soon after this private road was opened it became the main road for travel by the general public on account of a steep hill on the original route, which was dangerous at times. (1) Does constant use of such a road by the traveling public for more than five years make the road a public one the same as though legally established? (2) Can K, whose land is crossed by said road, close the road at his boundary lines?

Answer.—It does not. Where a road is not established by regular proceedings at law, and the owner does not dedicate the right of way for a

$1.90 FOR THIS DANDY GATE

These gates are not a special lot built down to a low price, but are full of the same quality, satisfaction and durability which can be obtained in any of our **triple-galvanized, high-carbon steel**

public road, the public must continuously use the same as a public road for ten years, under a claim of right as against the owner, in order to make it a public road. Use by permission of the owner is not sufficient. (2) If K did not dedicate any of his land for a road, and made no contract with R, which binds him to allow the road to cross his land, he can close it at his boundary lines.

Ask your neighbor to subscribe for The Homestead.

HINTS-SUGGESTIONS-DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

TO KEEP WAGON BOXES AND RACKS WHEN NOT IN USE.

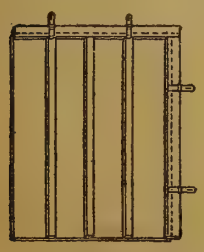
Wagon boxes, hay, corn and stock racks, become badly twisted if left for any length of time on the ground or on an uneven surface. To prevent this set four posts ten feet by sixteen feet apart, have them come about three feet above the ground, depending on the height of the majority of your wagons. Nail a 3x6 on the long sides. Wagon racks when placed on these will not only be kept in better shape, but will also be much easier to handle. It will be much better if this can be under a shed roof for the sake of the racks.

To Keep Nails, Screws, Nuts, Bolts, Etc.

It is always hard to keep the little things in the shop in good shape, and where they can be found. If the various sized brads, nails, nuts, bolts, screws, etc., are kept in a common box, the one a person is looking for can seldom be found and often when it is badly needed it may be right there, but cannot be located. If kept in separate covered boxes they have to either be marked or all of them examined. If marked the covers often are changed. A better way is to keep them in large-necked, heavy glass bottles, such as mustard, pickles, olives, etc., come in. When washed clean they make ideal receptacles for these little things. They can then be seen and the right ones easily chosen. It will also be noticed when the supply is running low, and it can then be replenished on the first trip to town.

A Durable Stack Cover.

A very durable stack cover can be made of boards, in sections about four feet wide by six feet long. Place four boards one inch by four feet by six inches side by side and fasten together by braces. Paint joints on upper side and paint bats before covering the joints. Do not run bats way to the top, but run one bat along the top, extending over about two inches on half of them and put no bats on the other half, so that the bat will cover them both. Put bats on right side of each section so that it will cover the edge of next section. Place barn hasps on the bats so that they will fit staples on the companion section. Care should be taken to get these hasps and staples rightly located. These covers will be found to be very convenient to use as stack covers, covers for machinery, chick coops, pig shade, cattle shade, etc. Being light and movable they can be put to a great number of uses and being rigid are not easily blown away, nor will they sag.



A Cheap, Efficient Seed-Corn Drier.

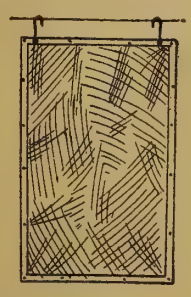
Seed corn should be picked early, and hung up immediately, not being allowed to lie in piles, as it heats quickly. A cheap yet efficient rack can be quickly and easily made. Take a three-fourths-inch board one foot wide and three feet long, bore a half-inch hole in the end. Now drive a row of ten-penny nails up each side through from both ways, having the rows the length of a nail apart, and the nails in the rows the same distance apart, also drive a row of finishing nails up each edge of the board. The nails should be driven at an angle so as to hold the corn on. In driving the nails drive only a few on one side, and then turn the board over and drive them through from the other side to prevent striking the points when working. A rack of this size will hold a hundred ears, or about two bushels. This will keep the corn so widely separated that it will not touch even at the butts, so it will never have to be touched during curing. The racks can be easily filled and hung up and also taken down and piled up when not in use, allowing the space to be utilized for other purposes. The cost of this rack will be about 14 cents.

A Bull Blind.

If the bull is vicious or goes through the gates, a very effective remedy is a blind made of heavy leather. Make it to strap around his horns and to come down past his eyes about five inches, fitting it closely to each side of his head. If the leather is stiff and heavy it does not need to be fastened below. Many valuable bulls have been sold because they were vicious when a dollar or so spent for a blind would have saved many hundreds of dollars' loss.

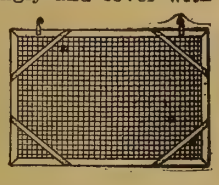
A Protection From Switching Cows.

Nothing is more annoying than being hit by a cow's tail when milking. To prevent getting hit stretch a wire along the ceiling, just back of the cow's rump, then take a board or grain sack and fasten wire hooks to it so it will hang directly back of the cow. If a grain sack is used it will be necessary to put a stick in it to fasten the hooks to, and also to keep it out its full width. With this the cow can switch to her heart's content, but the milker is fully protected, for she hits the board and cannot hit the milker. It also protects him from being hit by the cow directly back of him.



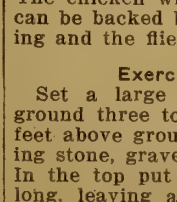
To Keep Chickens Out of the Stable.

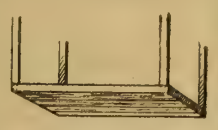
Make a frame the size of the barn door, brace it strongly and cover with chicken wire. Put on rollers or hooks to hang on track. When door is closed take off from track and hang it on the inside of the door. The chicken wire can be backed by fly netting or sheeting and the flies also kept out.



Exercise the Bull.

Set a large post or log into the ground three to four feet, leaving six feet above ground, set it firmly, packing stone, gravel or cement around it. In the top put an inch pin four feet long, leaving a foot above the post. For the sweep take a young tree twenty-five to thirty feet long, bore a hole seven to ten feet from the butt end and with a chisel trim away about the hole so that the pole is allowed to play up and down without breaking the pin. On the short end hang a kettle or nail on boards, troughwise, to hold stone enough to balance the long arm. At the end of the long arm bore a hole large enough to get a snap in. Nail a chain along the upper side of the pole, leaving the ring or snap hanging in the hole. This is done to prevent the bull from unfastening the snap, as many of them will do if it is not protected. In fastening the bull do not fasten the snap into the ring in his nose, but have a large ring in the end of the chain that is too large to slip through the ring in his nose. Run the chain up through the nose ring and fasten to the chain on the pole. Be sure to have a swivel in the chain or at the snap so that in turning around the bull will not twist the chain and break it. Locate if possible in a shady place. If your bull is logy, or will not breed, a few hours a day for a month on this turnstile will do wonders for him, bringing back his appetite, his bright eye and vitality. He will play around, shaking it up and down and running around in a circle.





For Calf Pails or Milk Stools.

Calf pails or milk stools under foot are both annoying and dangerous to stock and men. A very simple swinging shelf can be made to hold them where they are clean, out of the way, and always there when they are wanted.

In Ireland, the number of cattle and poultry has increased, but all other animals show a big decrease. Pigs in one year, have decreased 19.9 per cent.

Suppose You Try Grading Your Seed Grain Under A Guarantee!

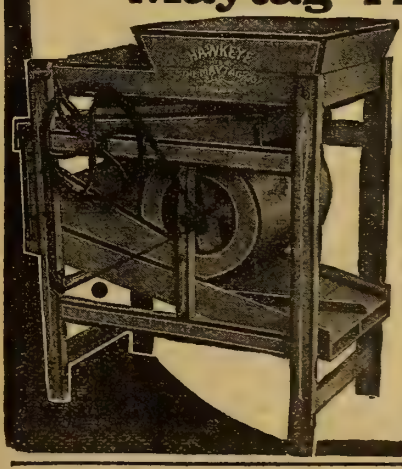
Grade and clean your seed wheat—oats—any grain—with a Maytag HAWKEYE Grader and Cleaner; and if you can tell us, after harvest, that it did not make an increase in your yield—more than enough to pay for the grader—*we'll return your money.*

What we *know* about this money-making machine is summed up in that offer. We couldn't afford to make it if we were not safe in doing so. And as we *are* safe, then you cannot afford to be without this grader.

We can prove to you that men using the Maytag HAWKEYE Grain Grader and Cleaner have made $7.00 more net profit per acre on oats—over $3.00 more net profit per acre on spring wheat—over $6.00 more net profit per acre on winter wheat. Can you beat that for an easy money-making proposition?

In other words, others have paid for this machine with the increased returns from three acres of oats, or a little over three acres of winter wheat, or seven acres of spring wheat. You cannot make anywhere near as much money on any other investment, and we say a HAWKEYE Grain Grader and Cleaner is the most profitable machine you can buy.

Maytag HAWKEYE Grain Grader & Cleaner



is a *completely guaranteed* machine. You don't have to keep it, or pay a cent for its use—if it doesn't do all we claim.

The Maytag HAWKEYE Grain Grader and Cleaner grades and cleans corn, all kinds of small grains and grass seeds; separates grain into proper grades for planting; takes out all dirt, trash, etc.; selects good seed from bad—grades perfectly and cleans thoroughly, a grader and fanning mill in one.

Write *now* for the facts. Free printed matter tells how this machine is made—how it operates—what it will do for you—what it has done for others. It will actually be your biggest money-maker. Don't go into another season without learning about it. Ask your dealer, or write us at once for complete information.

Disinfect Your Pens

HOG profit is absolutely dependent on hog health. You can't market heavyweights from carelessly kept pens. If you would gain the most return for feed and labor spent, keep all premises germ-free and hygienic with occasional applications of Dr. Hess Dip and Disinfectant. This is a guaranteed germ and vermin killer as well as a powerful deodorizer and disinfectant. It reaches down into cracks and crannies where lice and other vermin hide and quickly ends them. But more than this,

Dr. Hess Dip and Disinfectant

sprinkled about the hog pens and sleeping quarters materially lessens the liability of hog cholera and other contagious diseases. It also meets the Government requirement for sheep scab. It is non-poisonous, non-irritating, and makes an efficacious dip for cattle, sheep and swine. Cures dog mange and eczema. Nothing like it to sweeten sewers and outhouses. One gallon makes 70 to 100 gallons of solution. Dip book free—send for it.

NEWS OF THE SALE RING

Walker Bros. Polled Durham Sale.

That there is a strong tone to the cattle business was evidenced at the recent sale of Polled Durhams made by Walker Bros., Ord, Neb., on October 15th. These gentlemen maintain an excellent herd of cattle, and they each year make a sale of the surplus young stock. They have been making a good lot of money for themselves and sending out each year an excellent lot of stock that cannot but be of great value to the stock raising industry of the country. In the sale made a few days ago, they sold only a part of the surplus for the year and it netted them something over $5,000. Buyers were present from several states, and while they were not all supplied, yet it shows that there is a big interest in good cattle, and in Walker Bros.' in particular. The thirty-eight head were sold in a little over an hour's time and resulted in an average of $132.00 per head, and when one considers that a great number of them were 1913 calves it goes to show that they were appreciated. Col. Z. S. Branson did the selling.

The Beck Horse and Jack Sale.

The sale of draft stallions and mares and jacks and jennets made by Henry Beck, Litchfield, Neb., at Loup City, Neb., on October 23d, was well attended and a very successful sale was held. The demand for jacks was not strong, but the bidding on the other stock was fairly liberal throughout the sale. Only a few recorded jennets were offered and they sold well. Most of them that were offered were old and many undersized, yet they were all disposed of and at prices entirely satisfactory to Mr. Beck. Those that he is retaining are all of standard size and good colors, and probably the best lot of jennets in one herd in the West. S. F. Sears, Long Pine, Neb., was the heaviest buyer of the top jennets, while S. R. Sidders, of Giltner, Neb., took the greatest number and was a good bidder on practically everything in the sale. J. W. Jordon, Bloomfield, Neb., secured the two year Shire stallion offered, and certainly bought one of the best Shires within the state today. Col. Z. S. Branson conducted the sale and again demonstrated his ability to get the high dollar. His reputation as a salesman is of the very best, his methods clean cut and honorable. A list of all jennets selling for $50 or more and all other sales follow:

1.	Jennet, C. J. Benson, Sargent, Neb.	$ 50.00
12.	Jennet, S. R. Sidders, Giltner, Neb.	82.50
15.	Jennet, J. F. McCracken, St. Paul, Neb.	52.50
16.	Jennet, C. J. Benson	55.00
17.	Jennet, S. F. Sears, Long Pine, Neb.	105.00
18.	Jennet, S. F. Sears	62.50
19.	Jennet, S. F. Sears	75.00
20.	Jennet, S. F. Sears	95.00
21.	Jennet, S. F. Sears	95.00
22.	Jennet, J. L. Hoisington, Arcadia, Neb.	62.50
23.	Jack, North & Robinson, Grand Island, Neb.	205.00
24.	Jack, W. Johnson, Central City, Neb.	580.00

22	jennets	$1,023; average	$ 46.50
2	jacks	785; average	392.50
3	mares	870; average	290.00
5	stallions	2,990; average	598.00

Williamsburg Angus Sale.

John Cash, Jr., Parnell, Iowa, held his sale of Aberdeen Angus cattle at Williamsburg, Iowa, on October 16th. P. J. Donohoe, of Holbrook, and William Cash, of Williamsburg, were associated with him in this sale. It was a good offering and while the inclement weather prevented many from attending the sale the buyers were eager for good cattle. J. W. Norton topped the sale on the good bull, Black Andrew D. at $500. Esper, a good Trojan Erica bull sold for $300 to J. Tuder & Son. Fred Roberts topped the female offering on the show cow, Shenandoah Elizabeth 2d at $300. Escher & Ryan were the heaviest buyers taking nine choice females at conservative prices. The results of this sale show an increasing demand for good beef cattle. N. G. Kraschel and Fred Reppert did an excellent job of auctioneering. A list of those selling at $100 and over is appended:

FEMALES.

Blackcap Jam and b. c., calved February, 1907; D. W. Driscoll, Williamsburg, Iowa	$205
Blackbird Irma, calved October, 1907; J. R. Kline, Knoxville, Ia.	190

Gudgell & Simpson's Hereford Sale.

A good number of breeders attending the American Royal stayed over Saturday, October 11th to attend the sale of Hereford heifers held by Gudgell & Simpson, Independence, Mo., and another successful sale was recorded. The uniform lot of bred heifers went at a general average of $230.42. The top price paid was $335, two head selling for that amount. This shows the evenness of the offering. F. G. Oxsheer, Middleton, Texas, who purchased one of the tops, was the heaviest single buyer. Mr. Oxsheer has been purchasing cattle from the Gudgell & Simpson herd for years and appreciates the value of the Anxiety strains. Bull buyers were not out in any numbers and but five head of the John Lenox consignment were sold. Col. Fred Reppert did the selling and was ably assisted in the ring by Colonels Zaun and Snell.

Robison Bros.' Percheron Sale.

The opening Percheron sale of the fall season was held at Morton, Ill., October 20th, by Robison Bros., and the large attendance and wide distribution of the horses to buyers from Iowa, Illinois, Indiana, Ohio and New York, was conclusive evidence of the healthy condition of the market for draft horses. While prices were not high, they were satisfactory, and represented a good profit to the gentlemen making the sale, as with the exception of seven head, every horse sold was bred and raised on the Robison farm. There was a strong mare demand, but prices for the stallion colts were not as strong as they would have been had the sale been held three months later, yet they were very good considering the large number of weanlings. As it was those who bought the young studs secured excellent values for their money. The mares were an attractive lot, all breeders and all workers, and should prove remunerative investments for the buyers. The fact that the entire offering of forty head was sold in a little over two hours' time shows the demand for the horses and the snappiness of the sale. Every known defect was carefully pointed out by the Messrs. Robison, and the sale conducted in a clean and satisfactory manner. Colonels Jones, Reppert, Seeley and Carius were the auctioneers, and the following is a detailed list of the sales:

MARES AND FILLIES.

Imp. Garcia, foaled 1905; D. Augustin, Carlock, Ill. $600
Imp. Nocoase, foaled 1908; Paul Graze, Alta, Ill. 600

40 horses ..... 14,200; average 355

The Rude Duroc Sale.

The sale of R. Rude & Son, at Moorhead, Iowa, on October 22d was quite well attended and they sold everything at an average of $35. They had some unusually good spring boars in this sale and they were appreciated. No. 16, a son of High Chief, topped the sale at $72.50, going to M. T. Tweedy, Legrand, Iowa. The largest spring boar was No. 12, also a son of High Chief, and he went to J. D. Isaac, Red Oak, Iowa, at $60. Walter McAndrews, Vail, Iowa, secured a great bargain in No. 14 at $61 and Sam Oldhausen got No. 13 at the same figure. Colonel Kraschel cried the sale and did excellent work. Below we list those selling for $30 and over:

2. A. C. Thoreson, Mondamin, Iowa $35.00
3. A. C. Thoreson 35.00
4. B. Petersen, Ute, Iowa..... 37.00
5. F. L. Bell, Moorhead, Iowa. 36.00
6. Brady Lund, Moorhead, Iowa 32.50
7. F. M. Goldsberry, Pisga, Ia. 31.00
9. Wm. Hammer, Pisga, Iowa.. 40.00
10. Mark Ballantine, Soldier, Ia. 39.00
11. S. J. Sorenson, Moorhead, Ia. 36.00
12. J. D. Isaac, Red Oak, Iowa.. 60.00
13. Sam Oldhausen, Sutherland, Iowa 61.00
14. Walter McAndrews, Vail, Ia. 61.00
16. M. T. Tweedy, Legrand, Iowa 72.50
18. S. E. Sievers, Soldier, Iowa. 36.00
19. John Rustin, Moorhead, Ia. 41.00
20. Olof Sandvold, Moorhead, Ia. 30.00
21. Geo. Elias, Ute, Iowa 36.00
22. M. O. Brittain, Soldier, Iowa 35.00
27. Gill Brittain, Soldier, Iowa. 40.00
35. Gill Brittain 50.00

Theo. Foss' Sale of Polled Durhams and Durocs.

The cold weather and the steady rain prevented many from attending the sale of Duroc Jersey swine and Polled Durham cattle that was made by Theo. Foss, Sterling, Neb., on October 16th. While the attendance from a distance and locally as well was somewhat limited, the offering was disposed of. Walter Johnson, Dorchester, Neb., was the heaviest bidder on all the Polled Durhams and secured the herd bull. The cattle were right from the pasture and where they really sold too low, they averaged a little less than $100 per head. The Durocs made an average of $25 per head and all selling above that amount are listed. Col. E. Z. Russell and Colonel Putman did the selling:

1. Herman Ernst, Graff, Neb.....$76
2. W. M. Putman & Son, Tecumseh, Neb. 50
3. Henry Buss, Columbus, Neb.... 33
4. M. M. Hendricks, Falls City, Neb. 30
8. Herman Ernst 29
10. E. L. Busch, Syracuse, Neb..... 26
10½. E. L. Busch 35
20. Frank Leephart, Graff, Neb.... 32
34. C. L. McLeod, Dannebrog, Neb.. 25
38. Fred Heussman, Sterling, Neb. 26
39. O. S. Larson, Logan, Iowa..... 27

L. B. Branson's Short-horn Sale.

Immediately following the Polled Durham sale of Walker Bros., Ord, Neb., on October 15th, L. B. Branson, of that place, sold something near fifty head of Short-horns, and a few Polled Durham cattle. These cattle were taken right from the pastures, with absolutely no fitting, were sold without guarantee, as Mr. Branson is removing to the coast country, and yet they sold well. There were, however, a lot of most excellent cattle among them, and had they not been pasture bred, and had they been fitted a bit and guaranteed, they would have sold for considerably more money. As it was they average $100.50 per head. Col. Z. S. Branson did the selling:

FEMALES.

Mysie Lady 5th, calved 1908; L. T. Frederick, Memphis, Neb. ..$150.00

45 head ...$4,522.50; average....$100.50

Harris & Sons' Hereford Cattle Sale.

The sale of Hereford cattle held by O. Harris & Sons, Harris, Mo., on October 22d was a decided success. Buyers were in attendance from a wide range of territory and all were enthusiastic Hereford men. The show cattle attracted much attenion and the few show cattle listed to sell drew lively competition. The top of the sale was $2,600 paid by Johnson Bros., Eagle, Colo., for Gay Lad 12th, the junior yearling by the champion Gay Lad 6th. Competition above $1,500 on this bull was between the buyers and E. H. Taylor, of Kentucky. Repeater 18th, an October yearling by Repeater, sold as an extra. He was taken by A. Christiansen, Eagle, Colo., at $2,100. Gay Lad 9th, the senior yearling show bull that has stood as stable mate to Repeater 7th and second to him in most of the shows, went to Mr. Taylor at $1,500. Secretary Kinzer represented Mr. Taylor at the sale. The top heifer, Princess Repeater, was bought by him at $550. The sons and daughters of Repeater and Gay Lad 6th were in strong demand as were females bred to this great pair of herd bulls. The females were not highly fitted which is to the buyers' advantage, yet a much higher average would have resulted had they been carrying more flesh. Col. Fred Reppert did the selling. Col. Harry Graham and Colonel Nelson assisted in the ring:

Woodlawn Farm Holstein Sale.

The second annual sale of Holstein cattle at Woodlawn Farm, Sterling, Ill., October 21st and 22d, drew buyers from all sections of the country, and while the attendance was not as large as the merits of the offering warranted, yet those present were there for business, and a clearance was made at satisfactory figures. For the sale, Manager Williams had selected an attractive lot of cattle, and that they were appreciated was evidenced by the prices paid. This was particularly true of the daughters of Mr. Williams' great bull, Sir Netherland Cornucopia, of which there were eleven in the sale. The value of this bull as a sire rests not only on the fact that he comes from high producing ancestry on both sides, but rather on his ability to reproduce. His daughters in the sale were as handsome and well-developed a lot of young cows as one often sees, all two and three years old, and made the handsome average of $472. There was strong competition on all daughters of this bull, and every animal sold was bred to him brought added value. It was striking evidence as to what a great sire will do. In future sales Woodlawn Farm will be able to present more of the get of this great bull, and there can be no question but what he is destined to be one of the great Holstein sires of the country, as in fact he is now. There were no extreme prices paid, but values were at a healthy level. Superintendent Davis of the United States Indian School, at Genoa, Neb., was one of the top buyers of the sale, taking seven head for a total of $3,600. He was very partial to daughters of Sir Netherland Cornucopia, as was also George R. Herbert, Cuba, Ill., who was an active bidder on the better sorts. P. P. Lewis, St. Louis, Mo., was the largest individual buyer, taking nineteen head at prices which should make them a desirable investment. Buyers were present from Iowa, Illinois, Missouri, Nebraska, Oklahoma, Wisconsin, Indiana, Ohio and Minnesota, while there were mail bids from several states. The sale was conducted throughout in a strictly high-class manner, striking evidence of which was given at the close when Mr. Davis, of the United States Indian School, made a little talk, stating that he considered the sale had been conducted in a most honorable manner, and that the management at Woodlawn Farm deserved great credit, not only for the excellent character of the cattle they had presented, but also for the fair, square and honorable way in which the sale had been conducted from start to finish, and that on behalf of himself and the other buyers present he wanted to make that public recognition of the methods employed by Woodlawn Farm. It was a well-merited tribute, as Woodlawn Farm management certainly added to its reputation and widened its circle of friends and customers by the high-class manner in which the sale was conducted. Col. D. L. Perry officiated on the block throughout both days in his usual efficient manner, and was assisted in the ring by Georg B. Buck. The following is a detailed list of the sales:

Pfander & McClelland Sale.

The sale of Pfander & McClelland at Clarinda, Iowa, on October 25th was well attended and forty-seven head were sold at an average of $36. The top of the sale was a Proud Col. sow and she went to T. J. Long, College Springs, Iowa, at $77. It was an even range of prices, there being nothing high nor nothing very low. Some of the boars in this sale should have brought more money, as they were a good lot throughout. There have been a great many sales at this point of late, and many had bought at previous sales. Col. Kraschel cried the sale. Below we list those selling for $25 and above:

1 Albert Cheney, Lenox, Ia.....$66.00
2 Stacy Douthit, Clarinda, Ia.... 34.00
3 T. J. Long, College Springs, Ia. 42.00
4 E. G. Day, Clarinda, Ia..... 51.00
5 A. O. Baiker, Riverton, Ia..... 44.00
6 Tom Day, Hepburn, Ia..... 40.00
7 T. J. Long 72.00
8 G. A. Smith, Desmet, S. D..... 45.00
9 L. L. Hensleigh, Blanchard, Ia. 28.00
10 J. C. Beek, Shambaugh, Ia..... 28.00
11 S. A. Johnson, Red Oak, Ia.... 28.00

Cyrus A. Tow's Hereford Sale.

Cyrus A. Tow, Norway, Iowa, held a sale of Hereford cattle at his Fairview Farm, October 21st. This proved to be one of the greatest sales of beef cattle that has been held in Iowa for many years. It was a superior collection of bulls and females and it is only such collections that can draw such large crowds from a large number of states. Mr. Tow is to be congratulated not only on the outcome of the sale but on being able to present such a high-class offering. Fairview Prince, the Minnesota champion, was the top of the sale selling at $1,225 to L. E. Potter, Springfield, Minn. William Ottsen, of Iowa secured Mary's Distinction, a good young bull at $780. J. P. Oleson secured a great young bull in Standard 6th at $850. Harris Princess with a show calf by Gay Lad 6th topped the female offering selling for $780 to Elling Ellingson, of Norway. Mr. Tow made many friends by the straightforward manner in which he conducted the sale. Fred Reppert did a great day's work in disposing of the offering and has another great Hereford sale to his credit. A complete list of the sales follow:

Sheehan's Poland China Sale.

The sale of J. M. Sheehan, at Stuart, Iowa, on October 3d, proved a good one and he sold over sixty head at an average of $40 per head. There were no high figures paid, but it was an even range of prices with the demand very active. The top was No. 14½ that went to Frank Roberts at $101. Everything considered the sale was one of the very satisfactory ones of the season. Col. H. S. Duncan cried the sale. Below we list those selling for $35 and above:

1.	M. Mathina .....$	60.00
2.	W. W. Willey, Menlo, Iowa.	52.50

Williams Bros.' Sale.

One of the best Poland China sales held so far this fall was that of Williams Bros., at Villisca, Iowa, on October 23d, when they sold fifty head of boars and sows at an average of $45.10. The boys sold forty boars in this sale and ten head of sows. It was a good offering throughout and was seemingly well appreciated by the large crowd present. The top of the sale was No. 7, a spring boar sired by Big Sampson and out of a Pawnee Nelson sow, and he went to Frank Pelzer, Marne, Iowa, at $75. He was a splendid pig, large and smooth, with a big bone and if everything goes right with him will make an excellent herd boar. Col. Harve Duncan cried the sale assisted by Will Piper in the ring. Below we list those selling for $30 and over:

2.	R. W. Breckenridge, Clarion, Iowa	45.00
1.	Maasdam & Wheeler, Fairfield, Iowa	47.50

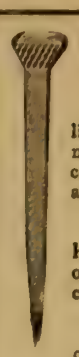
One Secret of Good Horseshoeing



lies in using the **right sort** of nail. Large nails in a small delicate hoof destroy too much tissue and tend to weaken the hoof.

Because "Capewell" nails have **half again** the tensile strength of any other nail smaller sizes can be used.

Years of experience teach conclusively that "The Capewell" nail **holds longest, drives easiest** and is **absolutely safe.** With this nail hoofs can be kept in prime condition.

Your horses are too valuable to neglect their shoeing. As a matter of business you should insist upon the use of "Capewell" nails. It's **profitable** for you and best for the horse.

Not the cheapest nail regardless of quality but the best at a fair price. Any shoer can afford "The Capewell."

You will know "The Capewell" nail by the check mark on the head—our trademark. Does your shoer use it?

THE CAPEWELL HORSE NAIL CO.

Messenger's Hampshire Sale.

Clayton Messenger, Keswick, Iowa, held his first sale of Hampshire hogs on October 14th. It was a success from every point of view. Eighty-two boars were sold and they were good ones. Buyers received good values. The sale was conducted in the same manner as all of Mr. Messenger's business, "On the square." Every animal offered was sold to the high bidder. H. D. DeKalb secured No. 12 at $155, No. 39 at $110 and No. 60 at $70. J. Crouch & Son secured No. 5 at $160 and C. P. Paulsen purchased No. 17 at $160. Buyers were present from several states and quickly absorbed the offering at appreciative prices as the list indicates. The sons of the undefeated grand champion, Messenger Boy, were in strong demand. Gene Fagan and Thos. E. Deem sold the offering and did an excellent day's work. Those selling at $35 and above are listed below:

1.	A. J. Shinn, Pittsfield, Ill.	$ 80.00
2.	H. R. Owens, Homestead, Ia.	40.00

Barker Bros. & Crowell Duroc Sale.

A splendid crowd came out to the Duroc Jersey sale of Barker Bros. & Crowell, at Riverton, Iowa, on October 24th, and they disposed of forty head at an average of $37. Everything in the sale, excepting four or five head, were spring boars and gilts, and the sale was in all respects a good one and the prices were very satisfactory. There were no high tops and no low prices, but an even range prevailed throughout the sale. The offering was in nice condition and the boys were well pleased with the auction. Colonel Kraschel cried the sale. Below we list everything that sold for $30 and over:

1.	W. C. Ballinger, Sidney, Ia.	$42.50
2.	Richard Olte, Sidney, Iowa.	40.00
3.	Henry Shultice, Riverton, Ia.	48.00
4.	J. N. Crowell, Riverton, Iowa	40.00
5.	J. N. Crowell, Riverton, Iowa	38.00

Lingford & Reilly's Poland China Sale.

The sale of Poland Chinas made by W. A. Lingford, Dannebrog, Neb., and L. F. Reilly, St. Paul, Neb., the sale being held at St. Paul on Oct. 24th was a decided success and one of the most inspiring of the season. This sale was made in one of the dry sections of the state, and was the only sale of a big circuit of Poland China sales that was carried through. It required some faith in the business to put up a sale in the face of such adversities as central and southern Nebraska have experienced the past couple of seasons, but that they were well repaid is shown in the sale average of $33.14 which was made on the forty-eight head sold. There were four head that were not sold, but the remainder of the fifty-two head cataloged found new homes. Buyers from a wide territory were present, and all complimented these gentlemen on the offering they put up. Col. H. S. Duncan did the selling in his usual creditable manner. All sales of $30 or more are listed.

Branson's Duroc Sale.

H. I. Branson, West Branch, Iowa, held a sale of Duroc Jerseys at his farm on October 15th. The offering was in nice condition and the sale was satisfactory to the seller. Buyers secured good values. Mr. Branson conducted the sale in a straightforward manner and made many friends by so doing. Large Wonder, a yearling boar, topped the sale at $47, selling to W. Worling, Tipton, Iowa. Colonel Gibson sold the offering. A list of those selling at $30 and above is appended:

Large Wonder, W. Worling, Tipton, Iowa		$47.00
1.	E. Hurst, West Branch, Ia.	30.00
2.	Mike Trier, Keota, Iowa	34.00
3.	U. S. Blough, Waterloo, Ia.	33.50

49.	John Foster, West Liberty, Iowa	40.00
50.	C. D. Brown, Lisbon, Iowa.	40.00
50 head	$1,316; average	$26.30

Mr. John McCarthy, writing in a Denver paper, states that after making thorough local inquiries in Argentina and Brazil, he has come to the conclusion that the placing of cattle and meat on the free list in the American tariff would not affect the price of beef in the United States. His reasons are mainly that Argentina has a full demand in Europe for the whole of her surplus, and that Brazil is not yet self-supporting in meat production, and is not likely to be an exporter in the near future, as her pastures do not fatten cattle, and various diseases are rife among her herds, which, moreover, are not of the quality suitable for the American market. He does not appear to take the resources of Australasia, Canada and Mexico into account.—[London Live Stock Journal.

In a recent talk on the cattle situation the president of the Armour Packing Co. said: "High prices are due to the shortage of beef. The remedy lies with the public. If every one should stop eating veal two years and not slaughter any cattle under two years of age our supply would soon get back somewhere toward the normal, and soon thereafter prices would drop."

A farmers' purchasing agency has been established in Milwaukee with the title "Consumers' Co-operative Co." "A Farmers' Purchasing Agency." The manager, F. T. Terry, has always lived in Milwaukee and has been in active business there for 30 years. They are sending catalogs free to all who ask.—Adv.

LANDS AND HOMES

ALBERTA

The Price of Beef is High and so is the Price of Cattle.

For years the Province of **ALBERTA**, (Western Canada), was the Big Ranching Country. Many of these ranches today are immense grain fields, and the cattle have given place to the cultivation of wheat, oats, barley and flax, the change has made many thousands of Americans settled on these plains, wealthy, but has increased the price of live stock. There is splendid opportunity now to get a **FREE HOMESTEAD OF 160 ACRES** (and another as a pre-emption) in the newer districts and produce either cattle or grain. The crops are always good, the climate is excellent, schools and churches are convenient and markets splendid in Manitoba, Saskatchewan or Alberta.

Send at once for literature, the latest information, railway rates, etc., to

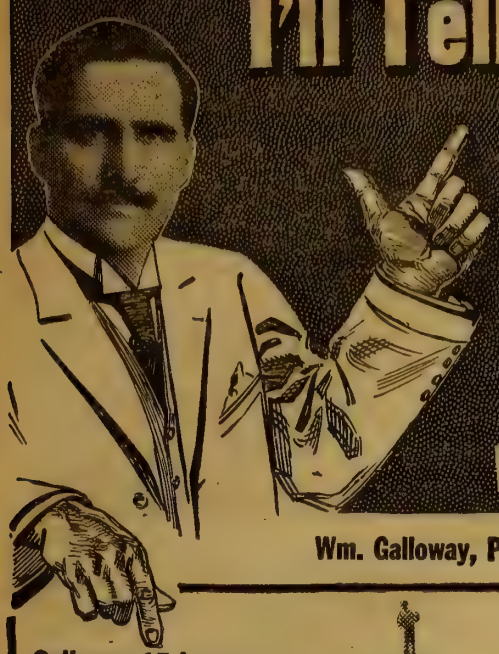
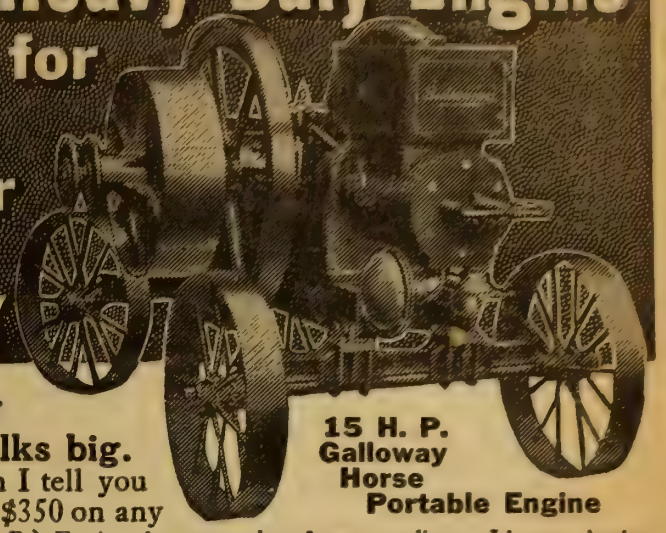
I'll Tell You How to Save $250-$350 On a Galloway Heavy Duty Engine

7½—10—15 H. P. for Running Any of Your Large Power Machines

Write Me Today!



Wm. Galloway, Pres.



15 H. P. Galloway Horse Portable Engine

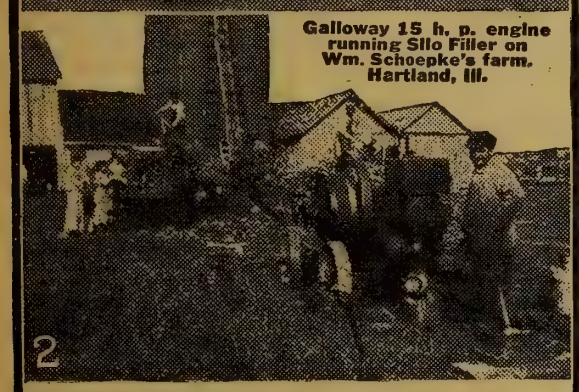
That's talking big **money but real money talks big.** I'll back up every statement when I tell you that you can actually save $250 to $350 on any Galloway Heavy Duty (7½—10—15 H. P.) Engine that you select from my line. It's an absolute fact and I can prove it to you in a flash when you get my offer.

Take my 15 H. P. Portable shown in the picture. **I sell it for half what you'd have to pay for a trust-made engine of the same power.** I said I'd prove your saving on any engine. All right, just drop me a line and I'll send you my big, illustrated engine catalog and Special 90 Day Price Offer. If anybody else wants to sell you an engine, **show him my prices and dare him to meet them.** I positively know that there isn't a single manufacturer in America who can meet my prices without losing money. My tremendous output and the direct selling plan that I have built up, make my low prices possible. When you buy a Galloway you pay just the bare cost of material and labor with only one small manufacturer's profit added. Compare that plan, backed by years of proved success, with the Trust way of adding four to six profits and you see how easy it is for me to save you $250 to $350 on your engine or your complete outfit. Now, I just want you to **investigate,** that's all. It's money in **your** pocket—**big** money. Write me a postal or a letter for my big engine catalog today. Remember, these engines are made in sizes from 1¾ H. P. to 15 H. P., either stationary or mounted, and are

Sold Direct from My Factory to Your Farm

All Galloway Engines are made right in our own big chain of factories at Waterloo. There are no better made engines on the market. Galloway Engines are easy to start. Will run without attention as long as you want them to. Use less fuel per horsepower than any other engines on the market. They are proved engines. Over 30,000 in use today and all sold with the privilege of testing them 30 days on your own farm before you decide to keep them, backed by a five year warranty on materials and $25,000 legal bond. Every user of a Galloway Engine is a booster for them. That's why we sell more of them than any other concern in the world selling engines direct to the user. Isn't that proof enough that it pays to buy the Galloway and save from $250 to $350.

Galloway 15 h. p. engine running silo filler on Edwin Carlson's farm, Winthrop, Minn.



Galloway 15 h. p. engine running Silo Filler on Wm. Schoepke's farm, Hartland, Ill.

Get a Complete Galloway Silo Filling Outfit and Save Big Money

Remember, I can sell you complete Silo Filling Outfit, Shredder, Big Corn Sheller, Irrigation Pumping Outfit, Corn and Grain Elevator and Dump, and many other big combination outfits—all at money-saving prices. Just write me and tell me what you want and let me quote you the lowest prices ever made on these outfits. Write me without fail today for my complete Silo Filling Outfit. Hundreds in use and all giving complete satisfaction.

Free Service Department

My free Service Department, composed of the best engine experts, will give you all the information you want for the proper installation and use of your engine. They will tell you the best size engine to buy for handling your different machines, size pulleys, etc., and how to equip your engine for doing the best possible work This service costs you nothing, but is worth a great deal to you.

Here's the Real Proof

I just want you to look at these five illustrations here, showing 15 H. P. Galloway Engines at work in different sections of the country, running ensilage cutters and threshing machines. These are only a few of the many views of Galloway Engines at work running different machines, which we have on file. My big Engine Book shows a lot more. Sent FREE.

View No. 1 shows 15 H. P. Galloway Engine filling silo on Edwin Carlson's farm at Winthrop, Minn. Notice how smooth the engine is running in picture and without any attention. No. 2 shows a 15 H. P. Engine running a 20 inch cutter filling 16x32 silo on farm of Wm. Schoepke, Hartland, Ill. Mr. Schoepke said it took them only twelve hours, refilling and all, and that he filled four silos last fall. He paid for his engine the first year doing work for his neighbors at $10 to $15 a day. Good money to be made with a Galloway Heavy Duty Engine everywhere.

View No. 3 shows a complete Galloway Silo Filling Outfit on Mr. Galloway's own farm at Waterloo filling two twin hollow-block silos, each 50 feet high. How's that for silo filling? The pipe is 54 feet long. No. 4 shows Galloway 10 H.P. Engine running threshing machine on Walter J. Anderson's farm, Newman Grove, Neb. Mr. Anderson says, "I put it to hard work and it did fine. I had two other kinds but yours beat them." No. 5 shows a 15 H. P. Galloway Engine running threshing machine on W. H. Stuckmeier's farm near Waverly, Iowa.

Write for Catalog and Prices Today

Write me first. Get my 90 day special prices before you buy any other style or make of engine. It will be the best investment you ever made. I am selling more Heavy Duty Engines than ever before in the history of this big business because the men who have bought and used Galloway Engines are helping me sell them. Galloway Engines are their own best advertisement.

Remember, if you want a small pumping engine, or medium sized engine, I can supply you at a big saving. We make all sizes from 1¾ to 15 H.P. New Pumping Engine Catalog just out. Let me send you a FREE copy.

Get My Special 1913 Offer

Then as a clincher I am making the most liberal 1913 Co-Operative Profit Sharing Offer I have ever made, which is a tremendous, big inducement for you to buy the Galloway. It will actually help you get your engine partly or entirely without cost to you in the end.

Just mail me a postal or letter for my big illustrated engine catalog and I will give you all particulars of this special offer by return mail. Write me today. Do it before you lay this paper down. Address

COW-TESTING ASSOCIATIONS.

To the Editor of The Homestead:

Cow-testing associations are organized and conducted for the purpose of securing accurate records on the individual cows in each herd of the members. The records show the production of each cow for the year in pounds of milk and butter fat, and the market value upon whatever basis the product is sold. The cost of the feed eaten during the year is estimated. Thus, as in the primary object of the work, each cow is put on a strict basis of profit and loss.

The result of cow-testing work is increased production. This is brought about through the weeding out of the inferior cows and the breeding of young stock from the profitable producers. Incidentally it gives to a dairyman, as nothing else can, an exact and business-like basis upon which to do consistent constructive breeding. After he has secured a detailed record of his cows for one year or more he is able to think of his cows in terms of pounds of milk or pounds of butter fat per annum. Then he will seek for a bull whose pedigree shows a higher production. Through the use of a bull so bred he can reasonably expect increased production.

The organization of a cow-testing association is comparatively simple when once sentiment is aroused to the necessity and value of the work. It is essential that a number of herds containing a sufficient number of cows be entered to make the work self-supporting with some nominal entrance fee per cow. Usually the smaller associations contain about 400 cows, the larger 600 or more. The cost ranges from $1 to $1.50 per cow per annum.

As a preliminary it is most satisfactory that a canvass be made amongst the dairymen of a community. This should be made by parties who are familiar with the workings of a cow-testing association and who are enthusiastic over the proposition. When men are met personally they are more open and free to ask questions. Each one sees different aspects and the personal interview gives opportunity to clear up those special difficulties as they cannot be done in a public meeting. In organizing an association at Wellsville, Utah, recently the writer spent four days in preliminary canvass. About one-half the dairymen of the locality were interviewed. Then a public meeting was held. After the final organization was effected the membership showed that a far larger percentage of men had signed contract amongst those having been seen before the meeting than of those who had their first explanation at the meeting.

As soon as a sufficient number of members has been secured a meeting for organization may be called. It is necessary to have contracts signed. If those who do the preliminary canvassing are men representing the state or any official capacity, or are men appointed by some temporary organization for that purpose, the signatures may be secured at that time. Otherwise they may be signed at the time of organization. A board of directors is appointed which has control over the workings of the association.

One of the chief duties of the board of directors is to hire a man to work as tester for the association. It is important that they secure a competent man for this position. Much of the success, or failure depends upon him. He should be a man who has had some training in an agricultural school, and also with some practical experience. Above all he must have common sense and be tactful. The salary to be paid the tester is usually governed by the amount of money to be raised by the payments of the annual assessments. Thus some associations with 400 cows entered at a rate of $1.25 per cow has $500 available to pay salary and operating expenses. In such cases the man cannot be paid more than $40 per month and board. An association with 600 cows entered at $1.50 can pay a man $70 per month and have a sufficient amount left for running expenses.

The computing of the records is even more likely to be neglected by a dairyman than is the testing. It being a part of the tester's duty to keep the records complete, he makes each one out according to a regular system and does it in a fraction of the time it could be done by one unaccustomed to the work. Thus it is done more satisfactorily from every standpoint and is done more cheaply when value of man's time is considered.

Cow-testing association work leads distinctly to increased production. In Denmark where it originated the average production of all cows in the country was doubled in the thirteen years between 1895 and 1908. From one association in 1895 there are now 800 in Denmark and as many in Sweden and increasing numbers in other countries.

Following is the butter fat as reported for a single herd that had been in a Swedish testing association for seven years:

Average Production	Butter Fat.
1st year	223 lbs.
2d "	247 "
3d "	288 "
4th "	318 "
5th "	341 "
6th "	362 "
7th "	364 "
Total increase	141

The writer has taken liberty to do some independent figuring and to draw some independent conclusions from the above figures. He found that the average total increase in pounds of butter fat per cow in the six years amounts to 582 pounds; with a market value at the very low price of thirty cents per pound—$174.60. This increase at $1.50 per cow per year would have cost $10.50. It shows surprisingly the big increase that comes from systematic record keeping and the practical culling and breeding that a man is able to do when he has the accurate data at hand.

Along with the increased yield always comes reduction in the cost of production. In the herd from which the above figures were quoted the same amount of feed gave more than 30 per cent greater yield after six years of testing. In another Swedish herd in ten years the production of butter fat was increased from 236 pounds per annum to 345. At the same time the amount of butter fat in proportion to feed eaten increased more than 38 per cent. In other reports it is shown that the cost of producing a pound of butter fat is reduced from twenty to eighteen cents per pound.

The incidental advantages of cow-testing associations must not be overlooked. The weighing of the milk enables a man to feed his cows grain in proportion to the amount of milk they are giving. In the association with which the writer has to do he advocates the feeding of one pound of grain with each four pounds of milk produced, in case the hay is first quality alfalfa. If the hay is of any other kind one pound of grain to three of milk is advised. This is the most economical method of feeding. No doubt a sufficient amount will be saved on the feed bill to pay the entire expense of testing.

Co-operative cow-testing leads to co-operative bull buying and to co-operative buying of equipment and co-operative selling on the retail market. It makes a district popular as a center for good dairying. It increases the selling value of cows in the herd. Grade cows with good yearly records are selling for $25 or more per head above the prices received for similar cows without records. All considered, the formation and continued operation of co-operative cow-testing work is the greatest step in advance American dairymen and farmers can take.

H. E. McCartney.

THE WINTER CALF.

To the Editor of The Homestead:

Every scheme of dairy farming which is expected to be profitable must provide the calves with such care as will keep them in a good, thrifty condition, so that a steady growth may be maintained. This need is very important, alike, in both beef and dairy breeds, as we have all found that it is the well-cared-for yearling that brings not only the top price per pound, but also costs less to produce each additional pound, than the older, ill-cared-for and starved animal of the same weight.

With the calf which is intended for the dairy, the profits are the same. The calf that has been well fed and cared for during her calfhood can be depended upon to keep up the record of her dam, more than the one that has been ill-treated and allowed to "rough it" through. With these facts in mind it is prudent to look after the young calves and see that their surroundings are sanitary to the extent that will promote health.

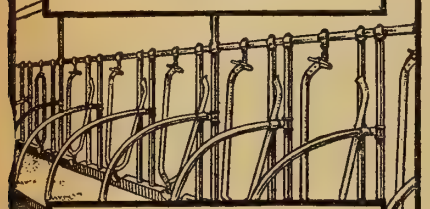
Winter dairying is held in favor by some men who are on to their job, because they can give the calves better attention. Such dairymen give their calves well-lighted, and well-ventilated stalls and these are kept as clean and have as much care as the stalls of the older cattle. Plenty of warm bedding is furnished, and if there is any suspicion of foul odor,

Less Labor-More Milk

YOU CAN CARE FOR A HUNDRED COWS WITH
LOUDEN DAIRY BARN EQUIPMENTS
EASIER THAN A DOZEN WITHOUT THEM.

Your cows will give enough extra milk to pay for the equipments in a few months. On one of the biggest dairy farms in the world this increase was 21%.

Louden's STALLS and STANCHIONS are sanitary, simple, strong and handsome. Keep the cows comfortable, healthy and contented so they will do their best.



Used by the U. S. Government and by more big, successful dairy farmers and breeders than any other. Low in price and permanent. Remember: these are the only really sanitary stalls. GUARANTEED to possess more advantages than any others. *See them at your dealer's or write us for catalog and full information.*

Write for our **FREE PLANS SERVICE** for your new barn, or for remodeling your old one. State how many head and what kind of stock you wish to stable. *Complete catalog Free. Write today.*

I AM offering a splendid lot of cows and heifers for sale, due to calve in the fall to a son of King of the Pontiacs, or Sir Pontiac Ragapple Korndyke. Will make prices to suit for next sixty days. Also a few bulls of serviceable age for sale. Address ROCK BROOK FARM, Station B., OMAHA, NEB.

Pure-bred Registered
HOLSTEIN CATTLE

To promote general prosperity and their own business, bankers in many parts of the country are buying pure-bred Holsteins by the car load and selling them on time to the farmers of the community.

Every year it becomes clearer that with large yield cows the cost of milk and butter production can be brought down to a point that makes dairying profitable.

A herd of pure-bred Holsteins is an investment that combines safety with large dividends.

THE BEST JERSEYS—Some choice bulls, few females. Address H. C. Young, Lincoln, Neb.

a light coat of lime is scattered over the floor before fresh bedding is applied.

To give the calf the best possible chance, it is well to have a pen or yard attached to the stall on the sunny side, but sheltered from the west and north winds, where the young calf can take exercise. In this yard a drinking trough should be placed; also a manger in which to feed hay or other forage, which they will partake of as wanted through the day.

The milk that is fed the young calf, should be as near the temperature that it is drawn from the cow as possibe, and it may be necessary to warm it slightly after it has been separated. The vessels in which it partakes its feed should be kept clean and sanitary by frequent scaldings and sunnings. There is little danger of diarrhea, which is so anoying and often fatal to the young calf, if cleanliness and the right temperature of milk are strictly attended to, and the calf receives its meals regularly.

If a case of diarrhea, caused from neglect, is taken in time, it can usually be cured. In addition to their feed, give one or two tablespoonfuls of castor oil in a pint of warm milk each night and morning. A half pint of strong tea made from spice cloves with the same amount of milk will also have a checking influence on the bowels.

Some make a feed of gruel made of meal to mix with the milk. I do not think this advisable, as it seldom fails to give the scours. Dry, coarse meal is much better for the calf than the wet, sloppy feeds. When fed dry feed, the calf is compelled to chew it and mix it more thoroughly with the saliva, and thus prepare it for complete digestion.

There is little trouble in teaching the young calf to eat dry feed. If a little meal is placed on its tongue, or placed in its drinking trough, its natural instinct to eat what is within its reach will assert itself, and it will soon be chewing its food well.

GREEN-CUT BONE IN THE WINTER RATION.

To the Editor of The Homestead:

At this season the principal object of the poultryman in caring for his flock of fowls is to get lots of eggs from the hens. In order to accomplish this object he must have, first of all, good, young laying pullets, or hens not over two years old. Then good, warm buildings must be provided for the fowls and they must be fed right.

The problem of feeding laying hens in winter is a big one. Briefly, it may be said that the hens should be provided with the different kinds of food or their equivalent that they secure on the range during the warm season. At that season nearly all flocks of poultry at liberty, whether the fowls receive much attention or not, produce eggs in an abundance because they are getting a ration best suited to the production of eggs. That ration is composed of grains and seeds, green vegetation and insects and worms. The insects and worms make up no small portion of the hens' summer ration because the fowls seem to prefer these above all other ingredients of their ration. Early and late, they are digging and scratching and searching over the yards for the bugs and worms; they will leave any other tempting food to chase after an insect or to snatch a worm. Apparently, they never get enough animal food to satisfy their wants. That the fowls need animal food and are fond of it, can be proved in another way. When throwing out the table scraps, throw down a handful of grain at the same time; it will be noticed that the meat portion of the table scraps is always eaten first.

Of course, there is no single egg-producing food that can be fed with profit exclusively. A variety of food that will furnish all the elements entering into the composition of the egg—protein, fat, water and ash—gives the best results at all seasons of the year. Foods that will supply protein and fat are particularly essential. These elements are found in a greater or less degree in the grains and vegetable foods, but there is one food that is especially rich in protein and fat, besides containing the other elements that enter into the composition of the egg. This food is cut green bone, which the hens take to eagerly on account of its animal nature.

Fresh green bone, not bone that has been baked or allowed to lie out in weather and sun bleach, when it becomes practically worthless, should be used. Many poultrymen char their meat bones on a bed of coals, after which the bones can be broken up fine and the birds will eat the material readily. But the heating process takes from the bones their most valuable constituents, the nitrogenous compounds. For this reason all bones should be utilized without charring by running them through a bone cutter. The poultryman caring for several hundred hens can profitably use a gasoline engine of small power to run the bone cutter. Dry bones are too hard to cut in a bone cutter; they have to be ground in a mill, which means that the poultryman must have two machines if he uses such bones. Green bone cannot be ground on account of its toughness; it has to be cut.

There is no comparison between green-cut bone and dry-ground bone as a food for poultry. When bones have become dry they have lost much of their nutritious matter and contain only mineral elements, principally lime and magnesia. Green bone contains those mineral elements together with the bone serum, marrow, cartilage and bone covering, all animal elements, in extract form, so to speak, and it also has the advantage of having a certain per cent of meat adhering which the butcher's knife cannot get and this makes it more valuable. Otherwise, bones of different animals do not vary greatly in food value.

A little experience will enable one to pick out the best bones and the ones that are the easiest to cut. They cut easier when frozen, and boiled bones are easier to cut than if fried or baked. Shin bones are so hard to cut that they are apt to chip the knives of the cutter.

Green bone should be fed in winter only. It spoils too quickly in warm weather, and then, too, in summer the hens can find insects to take its place. One ounce of green bone per day for each hen is the prescribed ration. Though a little more will probably do no harm, it is a good plan to go slow on it, as it is very rich and, being readily assimilated, it is stimulating to the fowls. Active fowls can safely eat more of it than the sluggish ones can, as much more will naturally be consumed in the building up of the tissues and organs of the body. Beginning with a little at first, the amount may be gradually increased until the hens are getting the required amount daily. At first, it should be fed only every other day. Green bone may be fed clear, or if desired, it can be mixed with a bran mash or other food.

When its value as a food is taken into consideration, green bone is one of the cheapest chicken foods that can be used in winter. In connection with green bone, foods rich in carbonaceous elements should be fed to supply heat and energy during cold weather.

TREATMENT FOR HOG CHOLERA, CONTAGIOUS PNEUMONIA AND TYPHUS FEVER.

(Continued from page 3.)

to be a common carrier for the other two. The pneumonia seems to be a secondary infection, as is also the case with typhus fever. The mortality seems to be very small from the other two when cholera is controlled. I will give a few examples where vaccination was used on herds containing these complications.

Herd No. 1 contained about 100 head of shotes averaging about fifty pounds in weight. Twelve pigs had died and about the same number were sick when vaccinated. After this about twenty-five died, but the balance are all healthy and doing fine. The symptoms were of penumonia and cholera.

Herd No. 2 was made up of about seventy-five head, mostly shotes, from which ten pigs had died and about a dozen sows and pigs were sick. In this herd the serum supply was exhausted and seven old sows were left without vaccination until more serum could be secured. These sows all died and also about twenty pigs. The balance are healthy. Symptoms the same as Herd No. 1.

Herd No. 3, containing about ninety head of young pigs and twenty-two old sows, had lost six of the young pigs, but none of the sows. After vaccination about twenty of the young pigs died, but the sows all survived. Same symptoms.

Herd No. 4 contained forty-six head of healthy young pigs which were vaccinated along in June, at which time there were no sick hogs in the country, to speak of. Twenty of these pigs died this fall showing marked pneumonic lesions. The neighbors on both sides of this man lost every hog on the place. They did not vaccinate.

These cases are merely average results obtained and go to show what can be accomplished by the use of vaccination in fighting these diseases and they should be sufficient to prove that with the cholera stamped out there is a lesser danger from its complications. If vaccination is properly performed with good serum it is absolutely the only chance of saving your hogs. Farmers who have had experience in vaccinating against cholera do not doubt its efficiency. The ones who are skeptical about it are the ones who are not posted or have been unfortunate in securing poor serum.

Every farmer should co-operate as much as possible to stamp out disease. Much of this can be done by simply using precautionary measures, such as being careful in purchasing new animals to place in the herd. Take into consideration the health of the herd from which you obtain your new stock, not only at the present time, but for a year back. Keep new animals separated for at least three weeks, so if anything turns up you do not have the whole herd infected. Remember that cholera and these diseases may be carried upon your shoes, so be careful about visiting other pens and also about others visiting yours. Avoid letting hogs have access to running water that drains adjacent territory. I know of several instances where infection has been transmitted to a healthy herd in this manner. Bury all dead hogs, as crows, etc., are liable to carry the disease.

Every farmer knows how contagious these diseases are and also what a high rate of mortality they carry, so try and do all that is possible to prevent them in your herd, using good, intelligent methods. Some may think that it does not pay, but wait until next spring and see what brood sows will bring to the man who has successfully fought against these diseases.

It is important that a brood sow should have good assimilative powers—that is, she should be a good feeder. Otherwise, the litter will be small and the sow will give but little milk. It is important that the sow should give a large quantity of milk, for unless young pigs get all the milk they need during the first five weeks of their life they are usually stunted in growth and require a long time and extra care for recovery.

Missouri ranks third in apple production, Illinois and Kansas standing first and second. But as Missouri has the most young apple trees the prospect is that it will be first within a few years.

The William Galloway Farm
AND BOTH HERDS OF
Holstein and Ayrshire Cattle
WILL BE SOLD ABSOLUTELY WITHOUT RESERVE ON
NOVEMBER 5 AND 6, 1913

THE farm itself of 180 acres and the modern dairy equipment upon it offers one of the greatest chances for big dairy or live stock profits in the corn belt. It is situated so that the markets of Chicago, Des Moines, Omaha, St. Paul and Minneapolis, just a few hours away, are ready to take the entire butter production, while Waterloo itself will take all the high class certified milk which can be produced at ten cents per quart. This is the best equipped dairy farm in the corn belt and the highest class proposition for a good, live dairyman anywhere in the West.

HOLSTEINS.

Among the cattle to be offered on sale day will be included King Segis Pontiac Combination 94710, a son of King Segis Pontiac 44444 and King Pontiac Girl 120834, whose sister, Spring Farm Pontiac Lass, holds the world's record of 44.153 pounds butter in seven days. This is the best bred young bull west of the Mississippi river today.

Also will be offered Fay Jewel Beauty 59866, grand champion Waterloo Dairy Show, 1912, grand champion National Dairy Show, Chicago, 1911; Daisy Mercedes Johanna Ormsby 78049, one of the best producing cows in the country, a 26.36-pound cow; and Daisy Mercedes Johanna Ormsby 2d 194972, a show heifer in every particular and said by eminent judges to be one of the finest produced last season. Lady Grace De Kol Johanna 67412 with a record of 20.46 pounds of butter in seven days, is a wonderful individual.

AYRSHIRES.

Among the Ayrshires will be offered Auchenbrain Good Gift 15487, one of the noted herd bulls, an imported animal of splendid conformation and most excellent breeding.

Among the cows will be Imported Howie's Ladylike 21432, said by Professor Kennedy to be an ideal type of Ayrshire dairy cow; Nona 2d of Avon 23090, a wonderful individual and a high-class show animal; Clemie of the Briers 33874, a cow now in a year's test for the A. R. O. (She milked about 70 pounds a day when fresh last January.)

Lady Hopeful's Pride 34428, and Dalpeddar Lady Taylor 30666, show cows of great merit, to say nothing of the blood of the prominent Milkman and other high-class Ayrshire strains.

Catalog ready. Remember the sale dates, and let nothing interfere with your being present as this stuff will go in its entirety, owing to my lack of time to give this wonderful farm and herds my personal attention.

There will be 20 head of Hampshire brood sows and early spring gilts, as well as the Hampshire herd boar, Rollen True. Our entire herd of show and breeding Durocs which we were just getting nicely started will also be offered, show gilts and sows and herd boars among these Durocs that will bring any breeder Duroc notoriety.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

BE READY FOR THE PULLETS.

To the Editor of The Homestead:

On many farms pullets are just about to begin laying. It has come to be quite general to see that chicks are hatched early, so that eggs may be had for winter use or winter sales when the price is high. That is all right, so far as it goes.

But often adequate provision is not made for housing these young hens and they get in the notion of roosting about trees and other out-of-the-way places, and laying their eggs wherever it happens. The old houses may be so crowded with the grown-up hens that there is little or no room for the pullets.

Now, this is a dangerous thing to permit. For one reason, we may be overtaken by cold weather before we know it. And if the pullets are compelled to stay out in trees or other exposed places, they will not do as well as they would if they had a good, warm place to live in. They will be so chilled and set back that they may not lay as they might otherwise do.

These are reasons why we ought to make provision at once for all the pullets, before the really cold weather comes on. If we have not houses enough to accommodate the whole flock, old hens and all, either there should be new houses made or the old stock sold off so that the pullets which are the really profitable birds, may have a fair chance.

If nothing better can be done, some old outbuilding might be temporarily fitted up with roosts, nest boxes, etc., to receive the young stock. It will be rather more difficult for the needs of modern poultry, but it can be done until such time as a house for the birds may be put up.

Comfort counts for everything with poultry. If we could know all the losses which are due to lack of this essential, it would surprise us. The poultryman who wants to make the most of his birds must surely not overlook this matter; and it will pay to be ready for the pullets at once, before the winter shuts down upon us.

E. L. Vincent.

THE NEW CHICKEN POX DISCOVERY.

To the Editor of The Homestead:

In former years chicken pox has been especially prevalent in the South, although by no means unknown in the North. Now its ravages seem to be increasing north of the Mason and Dixon line. As it is a disease most common in the late fall and early winter, it is a timely subject at this season.

Wisconsin has experienced such severe outbreaks of this disease among her poultry flocks that the matter was made a special subject of investigation at her experiment station. Its presence was recognized at some of the midwinter poultry shows last year.

It had been noted that fowls having the disease and recovering, were henceforth immune from the malady. This set some of the experts to thinking. The idea of vaccinating against chicken pox was not altogether a new one, as a European scientist had experimented somewhat with a serum, which, however, had not proved altogether satisfactory. The investigators connected with the University of Wisconsin took it up, and there seems a fair prospect that full immunity may be secured through the use by vaccination of the serum they have discovered. Already they have sufficient confidence in their discovery to be certain of its efficacy for one and a half to two years.

When this method is perfected it would seem possible by concerted action to wipe out this scourge from our flocks. It will be especially valuable to large commercial poultry plants, where the preventive and curative measures can be most economically carried out. Dr. Hadley says in his report:

Every detail of the disease, its prevention and treatment, were carefully gone over, and it was found that the vaccine was successful with infected as well as pox-free fowls. The vaccine is most valuable, however, when used as a preventive among fowls that have shown no signs of the disease.

In these experiments it was found that only four hens out of the 440 pox-free fowls that received the vaccine developed any clinical symptoms, which shows conclusively the efficacy of the treatment, less than 1 per cent of the fowls subsequently developing the disease.

Appended to this most interesting report is another statement which seems to open before the poultryman possibilities of security previously undreamed of:

Chicken pox and roup are said by authorities to be the same disease manifesting itself in different forms, while others declare they are two distinct diseases, but that they may both be present at the same time. In view of the similarity of these diseases, it is thought that the use of the vaccine treatment so successful in the case of chicken pox or sore head may be applied with as equally good results when roup threatens a flock.

May this blessed possibility prove a certainty! And now in view of the urgent need of some whose flocks are at present suffering with this dreaded disease, we quote a remedy recently given by a southern breeder who says he has never known it to fail:

Just as soon as any birds are affected, pen all of them up and treat as follows: Procure two ounces of carbolized vaseline and ten grains of yellow oxide of mercury. Mix thoroughly and anoint each bird's face, comb and wattles, etc., whether they have the disease or not, and you will have no more trouble with chicken pox. If some of the birds are worse than others, apply several times. Better results will be obtained if you remove the scabs before applying the mixture. A little permanganate of potash in the drinking water will act as a tonic and help to effect a cure. Use a one-grain tablet in a gallon of water.

As it has not been possible as yet to put the vaccine within the reach of all, this simple and easily-applied remedy will doubtless prove a boon to many a troubled poultry man or woman. Mrs. S. B. Titterington.

"It is better not to know so much than to know so much that is not so." For instance; A man had worked in the city the greater part of his life, and then moved to a farm with no preparation for the work. Poultry was to be one of the main lines for quick profit. He fairly ached to find an excuse to experiment with his chickens. The young stock became afflicted with gapes and he straightway began to put his hastily-acquired "knowledge" into operation. A strong liniment was mixed with their feed, and soon ulcers broke out all over their heads and mouths. To remedy this condition, a solution was made of equal parts kerosene and water and despite the warnings of those who knew better, this would-be poultryman dipped each chicken, with the result that within two days the entire lot was dead. No doubt that man had read that that particular liniment was a cure-all. No doubt he had "read" that dipping in a kerosene solution was good for—well, something. No doubt people should be more careful in writing that of which they know little or nothing and no doubt any one in his right mind should know better.

About housing your flock—all in yet? That annual roundup is inevitable and the way that many of us were caught unprepared in November two years ago should be a wholesome lesson. The open air is preferable as long as it is safe, but autumn weather is uncertain and not to be trifled with. Now do remember that your poultry house should be ventilated. Nine cases of roup out of ten are contracted after the flock is housed.

Mr. Firke, the Illinois goose man whose fattening and shipping of geese has caused wide-spread comment, has completed fattening quarters for fifteen hundred head to be handled next winter. The result will be obtained for this department.

POINTERS

—Mrs. J. M. Dries, Ashton, Iowa, has Light Brahma cockerels for sale as per quotation in the advertisement on this page.

—On this page of the Homestead appears the advertisement of Mrs. Wilson McIntyre, Red Oak, Iowa, quoting prices on unscored single comb White Leghorn cockerels and pullets.

—On this page of The Homestead appears the advertisement of Mrs. Sophia Rader, Laurel, Iowa, giving prices on Single Comb Rhode Island Red Cockerels and Indian Runner drakes.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Rural Route No. 56, Box 21, Philo, Illinois.

WITH THE EDITOR.

It is easy enough to be pleasant
When life flows by like a song,
But the man worth while is the man who will smile
When everything goes dead wrong.
For the test of the heart is trouble,
And it always comes with the years,
And the smile that comes with the praise of earth
Is the smile that shines through tears.

Literally a part of the above poem would mean little or nothing. It would call to mind a face distorted with a meaningless grin. From the standpoint of principle it is all right. Everyone desires to be happy. What happiness really is depends on the person. People there are who appear to get enjoyment out of being miserable, especially if they can share it with others. This, however, is a questionable kind of happiness.

Happiness has been defined as perfect contentment. This is true in part only; there are those who are contented that have no business to be. No true happiness ever came from dropping weakly down and being contented with any and all conditions.

All too many depend upon outside conditions for happiness instead of learning to depend upon themselves; miserable indeed is he who must at all times be entertained or diverted to be "happy."

"It is easy enough to be pleasant when life flows by like a song." Few indeed are they whose "life flows by like a song;" and equaling the inconsistency of a woman is the fact that, almost without exception, the people who are in this sort of environment will not admit that they are happy—more often the reverse.

Cheerfulness is the basis of true happiness. To be really cheerful, means to be courageous, helpful, and to make the best of a trying situation. Just as true as we live if we force ourselves to be outwardly cheerful we will in time become inwardly happy. It is simply the result of cause and effect. To be cheerful means to be ultimately happy.

Happiness is not confined to the classes, neither to the masses; also it is possible to acquire this most desired treasure, whether or not we are wholly content.

As two women were leaving a restaurant in a western city one of them, who was happy in spite of adversity, noticed a much agitated employe talking over the phone. "Is he badly hurt? I am his mother." Swiftly the other mother's thoughts went back home to where her own "kiddies" were anxiously awaiting her return. "I hope your boy is not seriously hurt," she said gently to the almost frantic woman. "Did the accident occur since you left home?" "Home," she echoed bitterly, and with scant courtesy; "I was turned out of house and home, and another woman is there over my children!" With a sympathetic word the other passed into the street with her companion, who remarked, half resentfully, "She is so crushed and friendless that she regards every one as an enemy," returned the other, with a "smile that shone through tears," happy that she had been privileged with an opportunity of speaking a kind word, well knowing that it had not fallen on wholly barren soil.

People there are who are happy that do not know it. This is an example of as nearly true happiness as we find, and its counterpart is possible in by far the greater number of homes. A little family possessed enough of this world's goods to live comfortably, and work was plentiful. After a strenuous day's work for others, the young man found that by working late he could plow his own garden. A small kitchen garden it was, and each "round" found him at the very door, where the young wife was preparing supper, while the baby pounded the shelf of his high-chair and crowed with delight. That genuine happiness was to be found here lies in the fact that these people understood that the world will never hold anything better, even if they live a long life, and amass a fortune, and so they are living a little every day.

HOME AND HOMEMAKING.

LITLE HELPS BY THE WAY.

If somebody loves you,
You cannot be sad;
You've cause for rejoicing,
You've cause to be glad.
You've a subject for song,
As you journey your way;
If somebody loves you,
You ought to be gay.

For love, after all,
Is the purpose of life;
The purpose of struggle,
And turmoil and strife,
If somebody loves you,
Why worry and sigh?
For love we are living,
And love cannot die.
—Edward A. Guest.

The small courtesies of life, given or received, make a man none the less a man.

This is the best day the world has ever seen. Tomorrow will be better.—R. A. Campbell.

The only man who never makes a mistake is the man who never does anything.—Theodore Roosevelt.

THE NEW SUIT.

How many of our girls are to have a new suit this winter? All of you, I hope. Now listen: Do not make a mistake of purchasing the first one that strikes your fancy; if you do, you will probably be tired of it in a fortnight. Eschew trimming, buy the best material your purse will afford, and the tailoring will do the rest. Better far to wear a really good garment two seasons than to invest the money in two new cheap suits.

FOR THE COOK.

Roasted Spare Ribs.—Hack the ribs down the center, just enough so they may be bent together. Prepare any desired dressing; the old-time bread dressing is a general favorite, seasoned with either sage or finely minced onion. Spread thickly on one-half of the ribs and bend the other side over, fastening with a skewer or twine. Place in the oven and baste frequently. When done, remove from pan and pour a little cold water into the stock, that the fat may be easily removed. Thicken with flour stirred smoothly into a small quantity of water.

Wild Grape Jelly.—Equal parts grape and apple juice, make an appetizing jelly, with an odor almost like honey. Boil the juice ten minutes before adding the sugar, which should be previously heated. Cook rapidly until the mixture foams and rises to the top of vessel, when it is ready to put into glasses.

AMONG OURSELVES.

We have answers today to the heartsick, soul-sick cry of "Mrs. Lonesome." "Mrs. Ditto" tells how she interested an indifferent husband in spite of himself:

Just a moment—then the oven will be hot and the buns must be baked. Dear little "Mrs. Lonesome," I read your letter again and again. How I wish we could talk to you right from our hearts. I say "we" advisedly, because I know that letter was read more than once by more than I. You knew that yours was not an unusual experience, and so you came to "Among Ourselves" for comfort and advice. Our sympathy you surely have, but who of us can give advice? We might let a little bitterness creep in; bitterness against our own lot, and the lot of women in general. You love your husband; if he were to step in now, and take you and the babies in his strong arms, how happy you would be! But he doesn't, he is thinking of pigs. What shall you do about it? Do what soldiers have always done—do your duty. Whenever someone in power acted to his own selfish end, and things got into a dreadful tangle, then came the soldiers to right the wrong, to suffer, and too often to die in the cause. Do you realize that we are all soldiers? If someone fails to do his duty, then we must do our duty just twice as hard. Some people live to be old before they realize this, and some never do. I, too, am a young wife, and I am left alone, oh, so much of the time! In my case, there are no precious babies to love and care for, though my heart aches for them. However, I took my husband's name, and belong to him. Failing to interest my husband in the things I like, I made up my mind that I would become interested in the things that interested him. Then it was that happiness came to stay. It may be that a similar proceeding would not reach your case at all. Everyone must study out his or her own problem. Only in extreme cases are men wilfully cruel. And now

a kiss for each dear baby, and love and good wishes for yourself from one of your many friends and well wishers.

"Mrs. Ditto" has given us a good talk, and her plan would answer in most cases. Who else has worked out this hard, hard, problem?

Mrs. "Has-Been" gives a very philosophical solution for a "grouch" that her husband persisted in carrying:

I have never written a word for this department, although I have greatly enjoyed the good things others have written. When I read what "Mrs. Lonesome" has written I couldn't keep still any longer. I heartily sympathize with "Mrs. Lonesome." If I were in her place, I would put the babies to bed and go to bed myself, and get all the rest and sleep I could, and so save my strength for my work. That kind of man never cares whether his wife is worrying about him or not. Neither does he care how hard she may be working for him. I would talk to him in just the way he talked to me. If he didn't talk at all, neither would I. This may seem cruel, but, dear sisters, my husband was seldom away from home, but from the way he treated me, I would rather he had been. While at meals, and in the evenings, he would say no word, unless it were to ask why I had not done this or that, or why it was not done better. After trying everything I knew, and getting nothing but a grouchy answer, I considered nine years quite long enough, and tried a new plan. If he was pleasant, I was pleasant. If he was cross, I was cross. In short, I treated him exactly as he treated me. For a time it nearly killed me, but knowing it would never do to give in, I kept it up as long as he did, and, after many trials, was rewarded with success.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. yoke, coming down well on the sleeves and the loose underarm is novel.

The waist pattern, 6291, is cut in sizes 34 to 42 inches bust measure. Medium size requires 2⅛ yards of 36-inch material. Price of above pattern ten cents.

6274 Boys' Russian Dress.—This pretty suit has an extra large armhole and is made high in the neck, with the closing well over at one side. The belt is wide and flat. Such materials as linen, pique, poplan, pongee silk as well as the simpler fabrics, gingham, percale, serge and the like are used for these suits.

The suit pattern 6274 is cut in sizes 1, 2 and 3 years. Medium size requires 1¾ yards of 36-inch material. This pattern can be obtained for ten cents.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Rural Route, No. 56, Box 21, Pitlo, Illinois.

TOPICS FOR NEXT TIME.

Letters are desired that tell about kindness to animals. Now think: What, so far as you remember, is the greatest kindness you ever knew to be offered to a dumb creature? Is kindness to animals to be commended, and why? Please give your full name and address as well as your pen name, and remember that neatness and punctuation count much.

Likes Ponies and Stories.

We always have a big dinner the last day of school. We, my brother and I, live two miles from school, and keep a pony to drive. He is a perfect pet, and will do many cunning things. We love him. I like to read stories, especially about early settlers and bears. It would be interesting, I think, if some of the young folks would tell us about these things that have been told to them by their fathers and grandfathers. — H. A.

A Small Farm Woman.

We have a round barn that contains a tank in the loft which holds sixty barrels of water. The barn also has a litter and hay carrier. My papa keeps black cattle. For pets I have a Scotch collie and a kitten, besides a family of eight dolls. —Grace Johnson.

[Come again, Grace, and tell us the name of the black cattle which your father keeps.]

A Farmer Boy.

I am a farm boy. I help in the garden and feed the chickens and calves. I have three pets: a hen, a pup and a little pig. The pig's mother died when it was a little thing and I take care of it. I am one boy who will promise not to use tobacco. I think Velma Shaw is right in what she said about it. I think the answer to Ruth's riddle is, a hill. It is as hard to get up as a pill is hard to get down.

—Burl Huffman.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

4th Quar. Lesson 5. Num. 22:1-13. Nov. 2, 1913.

BALAK AND BALAAM.

A great racial migration was in progress. The natural effect of it was to fill all neighboring nations with gravest apprehension.. The alien clans were like a scourge. They were myriad in number, warlike in spirit, and thoroughly trained to arms. They had had victories enough to give them confidence. No land could support both them and the original population. Their entrance was of necessity the expulsion of the native races. One frightened king bethought him of a strange weapon—something brand fire new in the art and science of war. It consisted in a concentration of malevolent and hostile thought. He wanted every living soul of his nation—men, women and chidren—to form a concert of evil-wishing against Israel. The irreversible psychological effect of this would be a suitable moral depression—a paralysis of the esprit de corps of the invaders. It would be noiseless anad smokeless, but more deadly than a modern Gatling gun. Success in this strange process turned upon the finding of one whose fame for true prophecy would give prestige to the scheme and whose magnetic influence would draw all into the proposed league of hate. So Balak turned to Balaam. He must be had at any price. Cost must not be counted when the very perpetuity of the dynasty was at stake. At most the scheme could never make as heavy a draft upon the treasury as the mobilizing of an army. Balaam's descent to hell makes a fine study in casuistry—well worth close attention. It is passing strange that one whose very art was to read the motives of others, and divine by this means whether their success would be genuine and permanent or not, should not be able to read his own heart, or at least be controlled in his action by what he read there. Balaam temporized and lost his soul. He could not withstand the flattery of having an imperial embassy waiting his pleasure at his door. Pride was the first step. Cupidity was the second. He was dazzled by the glint of gold. All his rhetoric goes for naught. His fine speeches do not ring true. His tongue affirms one thing, but at the very moment his heart is toying with the opposite. History does not afford a more striking commentary upon the familiar text about knowing one's duty and doing it not. Balaam did not even get the cheap reward of gold or kingly apparel, which perhaps he craved more, while the "soundless lash" of a violated conscience beat him with many stripes. He knew his duty, he did it not! "How sad to trace each step from splendor to disgrace!"

WHAT ONE SCHOOL IS DOING.

To the Editor of The Homestead:

I have recently had occasion to make inquiry as to the character of the work being done by one of our local schools and I am going to submit to you the results of my observation. This school is located in the outer suburbs of a large city, but, while a part of the city system, and under the supervision of the city superintendent, it is practically in a farming district. The principal is a man whose experience as an educator has covered the field that is open to a teacher of country, village and city schools. Having been raised on a farm, the interest in the farm and its products remained with him and induced him to ask for the assignment to this suburban school. He wanted to inject into the usual school methods of instruction some ideas with reference to practical agriculture.

The plans put into practice in the accomplishment of the purpose were unique. The primary object was merely to awaken an interest in the work of the farm and not in any instance to provide instruction. Patrons of the school were first approached. They responded by contributing a small sum of money to be offered as prizes to pupils of the school who would, at the end of the growing season, show the best samples of corn, potatoes, pumpkins, squashes, etc. The prizes were awarded at an exhibition held at the schoolhouse. The competition was voluntary and there were no restrictions as to quantity grown or manner of cultivation. No instructions or advice were given as a part of the school work. If information were obtained it was by personal endeavor of the pupil, and usually from the parents. The exhibit of the first year was not a large one, but it was the means of interesting parents and pupils who had before given it no consideration.

The second year work culminated in a pretty little show held early in October. In this the competitors included thirty-four of the 106 pupils enrolled. Poultry growing had been added and a division of domestic science provided for girls. In this prizes were offered for sewing, butter making, bread and cake baking. A total of $22 had been subscribed for distribution as prize money. The exhibition was an excellent one, not so much in the results shown as in the enthusiasm made manifest on the part of both parents and pupils. A lecture was a part of the program of the afternoon, the subject being one appropriate to the occasion. In the agricultural department there were two varieties of corn, two of potatoes, pumpkins, squashes, melons, tomatoes, etc., which were supplied by thirteen boys. In the domestic science, or girls' division there were butter, cakes and bread of superior merit, as well as excellent specimens of sewing and plain needle work.

The success of this effort to create interest in soil culture has been so

28,000 Perplexed Women Who Keep House and Wanted Something New and Different

For the table, a new recipe, a new way of doing something, a quicker way to wash, iron or clean; new menus. These women wrote to us and each one was quickly and fully answered by mail in a personal and direct way.

Thousands of women wanted to know how to buy or cook or serve more economically: how to meet the high prices of food: how to feed their men folks or their children—in short, all the problems of the housewife.

Naturally, this is a strong and leading department in the work of a magazine like *The Ladies' Home Journal*, and there has been perfected back of the magazine one of the most effective domestic-economy services possible, with two expert household authorities as editors. And these stand ready to smooth all perplexities of the housewife who doesn't know or who has become weary and wants something new or different: a new impulse: a new idea: a thought: a help. What housewife doesn't, after keeping house for years?

And the help is given quickly by mail: direct, personal and fully. And nothing is charged for it to any reader of *The Ladies' Home Journal*. A booklet, entitled "The Story of 600,000 Invisible Hands," tells something about this service. A postal-card request will bring a copy.

A year's subscription to *The Ladies' Home Journal*, by mail, costs $1.50, or it may be bought from any Newsdealer or Boy Agent at 15 cents a copy.

Big Doll For You

D-L-I-D-M-L-

Can you fill in the blank spaces above and complete the doll's name? You can do this if you try. Just write and tell me what the name is and I will tell you how you can get this beautiful doll, nearly two feet tall and jointed at shoulders and hips. Her eyes open and shut, she has long flaxen hair and is beautifully dressed. You will be the proudest girl in your neighborhood when you get this doll, and she is yours for just a little easy work. Be sure to write and tell me her name today so I can send you my great free offer.

PEOPLES CO.

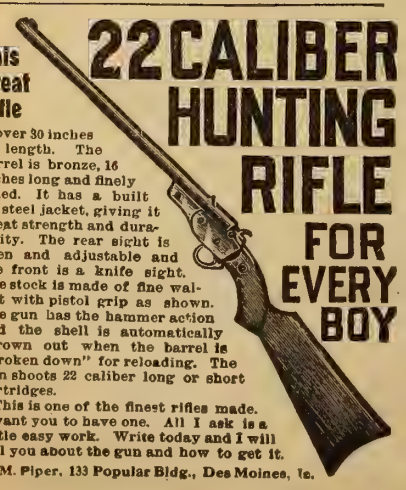
This Great Rifle

22 CALIBER HUNTING RIFLE FOR EVERY BOY



s over 30 inches n length. The barrel is bronze, 16 inches long and finely rifled. It has a built up steel jacket, giving it great strength and durability. The rear sight is open and adjustable and the front is a knife sight. The stock is made of fine walnut with pistol grip as shown. The gun has the hammer action and the shell is automatically thrown out when the barrel is "broken down" for reloading. The gun shoots 22 caliber long or short cartridges.

This is one of the finest rifles made. I want you to have one. All I ask is a little easy work. Write today and I will tell you about the gun and how to get it.

A. M. Piper, 133 Popular Bldg., Des Moines, Ia.

marked as to induce the board of education to purchase two acres adjoining the school grounds for the purpose of enlarging the experiment and giving it official endorsement and support.

Next year the plan will be broadened. Prizes will be offered for home-grown products, while the school ground will be devoted to experimental plats with which to illustrate and study habits of plant growth, the effects of different methods of cultivation, and the benefits of fertilization. To each boy will be assigned a section of ground on which to conduct the experimentation in the growing of such grain or vegetable as he may select. Work in this tract will be under the direction of the principal and the general supervision of the board. The instruction planned in connection with this experimental work will include preparation of the soil, selection of seed, planting, cultivation, harvesting, and selection of samples.

Preparatory to this work, an elementary course (of the regular college short course order) will be inaugurated. Animal husbandry will also be taken up in a primary manner. It is planned that in the latter work assistance will be received from professors of the state college of agriculture.

It is hoped, too, that the next season's competitions may include acre plats of corn. This is not beyond the range of possibilities, as it is now evident that 75 per cent of the enrollment of the school will in another year take an active part.

It is a surprising fact that this small start in the encouragement of soil culture among young boys has led to betterments not looked for or included in the original objects to be attained. Boys became more studious, and were constantly in search of information concerning the special line which they had taken up. In some cases spare time usually taken up by playful occupations of boyhood was given over to work with the grain or vegetable in which they had become interested. There was a decided improvement in the general conduct of the school, and a uniform feeling of satisfaction on the part of parents.

STORING CANNAS AND DAHLIAS.

There is a well-known difficulty in carrying over these tubers successfully in common cellars. If they are kept too dry, or too wet, too cold, or too hot, injury is bound to result. A very nice balance of conditions must be maintained. Decay will result if they are kept too damp. And they will shrivel to lifelessness if kept too dry. If the cellar is cold they will freeze, and if too hot the decay is hastened. It is the settled opinion, the result of many experiments, that a furnace-warmed cellar is, upon the whole, the best place for them. But it should be a large cellar, so that the tubers need not be kept near the hotter parts of the room.

It is best to dig the tubers before the soil freezes, for the tops of the tubers must not be frosted. Many a loss is explained by the fact that the tubers were frosted before they were taken from the garden. Usually there comes a frost which cuts the bloom without injuring the bulbs; in fact, the stalks will remain green near the ground.

Before digging cut the stalks about six inches from the surface. Dig carefully, letting as much earth as possible adhere to the roots. Leave the separation of the roots to be done in spring at planting time. It is an important point to leave the dirt attached to the roots. This will gradually dry out, but it will retain enough moisture to carry the tubers through the winter under ordinary conditions.

But if, when you dig, the soil is dry and cleaves away from the roots, you must supply the deficiency. As a matter of experience, the earth will usually fall away when you dig, so that it is not safe to trust to that. The way is to prepare a puddle, two quarts of red clay to two pails of water, or put in more clay if you like it thick. Have this puddle in some receptacle large enough to cover the whole bunch of tubers, when it is inserted. Lift out carefully, letting the mud adhere as much as possible. Set them down and then disturb them as little as possible. As the mud dries it will form an impervious coating which will maintain the requisite moisture, and will also, if the cellar is dry enough, prevent any decay.

It is well to make an examination during the winter. If the tubers are found to be shriveling they are too dry—you need a cooler place for them. If they are prone to decay their surroundings are too damp. Move them to a drier, warmer place. Use care, remembering the conditions needed, and you will succeed in keeping over your tubers.

Some varieties, both of cannas and dahlias, are easier to winter than others, and that means you must give a little more attention to maintaining the right conditions.

Successful wintering is an important matter of dollars and cents. Those you have grown in your garden, if well wintered, are just as good as the ones you may buy of your florist, at ten to twenty-five cents each. This means a good deal to the one who loves these flowers and likes to have hedges of cannas and dahlias.

OUR AGRICULTURAL NEEDS.

To the Editor of The Homestead:

The governor of Iowa recently appointed a committee to consider and report upon the agricultural needs of the state. It is to report to a commission appointed by congress to study the above question.

I presume a good many people would say the most important thing for the farmer is to raise larger crops. This is important, but the work of the extension department of the state college of agriculture through short courses, farmers' institutes, special trains, bulletins, etc., has awakened quite a general interest in the production of larger crops. The average yield of corn has been perceptibly increased by an improved system of rotation in which one of the legumes more generally enters; and the selection of seed and the preparation of the seed bed have received more attention than formerly.

While it is desirable to raise the largest crops possible it is just as important to be able to sell them at a price that shall be profitable to the grower. Under our present system of marketing this is not always realized. The difference between the price the producer gets and that which the consumer pays is often out of all proportion to the cost of transportation. When the price of produce is 100 per cent more in the city than it is fifty miles away some one besides the railroad company is making more for handling it than he ought, or else it passes through the hands of more middlemen than necessary. How to get the producer and consumer closer together is one of the crying needs of both classes. If the relationship between them could be established on mutual lines of helpfulness it would do much to reduce the cost of living in the city and at the same time make it more profitable to the farmer.

Co-operative marketing has been made a success in some lines of agricultural and horticultural production. For example, in dairying and citrus fruits. About the only co-operative industry that has proved a marked success in the middle West is the creamery and that was a slow growth.

I very well remember what a struggle the co-operative creameries had before the farmers learned to trust themselves and to stand by each other.

The principle of co-operation has been so thoroughly demonstrated in many ways that it is strange the farmers have not adopted the methods used so successfully in dairy matters and which are also used by business men and manufacturers.

The matter of prime importance in successful co-operation is getting together and getting acquainted with each other. To accomplish these desirable conditions farmers' clubs ought to be multiplied many fold. If every neighborhood had a weekly or monthly club or society in which farmers could get better acquainted with each other, and questions of mutual concern could be discussed, it would not be long before co-operative buying and selling could be brought about to the advantage of the rural worker. If lumber, coal and other supplies could be bought for a neighborhood instead of the individual there is no doubt the purchasing price would be very materially reduced. And if a dealer had to offer a price for stock and grain that would mean all that produced by fifty farmers instead of one he would undoubtedly pay every cent the market warranted.

It seems to the writer that the United States Department of Agriculture could not do a more helpful service to the rural population than to promote the formation of country clubs. Farmers' institutes are all right; special trains for the purpose of awakening an interest in some phase of farm economy are good as far as revival work is concerned, but what is needed is something to keep the interest from flagging.

The department has promoted clubs in the South and we are told that they have awakened a great deal of interest and have been very helpful. There is no reason why it should not help the farmer in the North in the same fashion.

At the present time there is a good deal being said on the subject of rural credit banks, but I have no great faith that any benefits will accrue to anybody by the authorization of such banks except the politician. The bills before congress that I have seen, if enacted into law, will not, I fear, help a poor man to buy and pay for a farm. But if the poor man who wants to get started only thinks he is going to be helped, and votes for the congressman that favors the bill, the sole purpose of the cheap politician will have been accomplished.

Let the government help in a way that is above suspicion of political ambition. Let it help the farmers to help themselves.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Oct 24.—The advance in fat cattle values this week may be logically expected to fetch in a run next week, but the fact must not be ignored that the sharp upturn this week has been due to limited supply as much as broadened demand and an excess over actual requirements next week is the last thing to be desired. The fact has been demonstrated that killers were doing a hand-to-mouth business and are under the necessity of getting access to a fresh supply right along. This disposition not to accumulate beef in the coolers is doubtless responsible for an aggravatingly choppy market.

Packers were out picking up cheap, grassing, native steers on the week-end market after a fashion that caused the trade to sit up and take notice. These $7@7.40 steers weighing 1,000 to 1,100 pounds have had no corn and are strictly on the grasser order. How much higher they are than a week ago was the subject of some speculation as no reliable outlet existed then, but they were considered 20@35c higher. Hunger for them is capable of but one construction. Killers are not looking for much western beef the rest of the season, and the trade calls for cheap stuff in considerable quantities. It is suggestive that the Argentine scream is a bogey, as the South American chilled article is exactly the kind of beef that would naturally compete with the native steers selling around $7. The result of this demand was the clearance of a lot of stuff that was on the sale list last week, fleshy steers undesirable from a feeder standpoint.

Most beef steers are 25 to 35c higher than low spot last week, but many of the plain weight grades now selling around $8.50 to $8.75 are 40c up. Yearlings lost little last week and show the least upturn. A lot of heavy cattle that did well to make $9 last week have gone over at $9.25, and prime yearlings scored a $9.70 top, a new high notch for the year. Best heavy steers stopped at $9.35.

The disposition of packers not to accumulate probably accounts for the present aggravating eccentricity of the cattle market. So far not enough Argentina beef has reached United States ports to exert an influence on prices, but Canadian stuff is being heard from and is diverting considerable demand from Chicago, eastern butchers and feeders having filed few orders here since the duty was taken off. The Canadian run is not expected to be of long duration, however, and Canadian killers are already showing alarm over a prospective shortage that will necessitate putting live stock trade between the two countries on an absolutely non-tariff basis.

A twenty-car consignment of Alberta grass cattle, the first to reach Chicago from western Canada since the tariff bars were lowered, was received Monday and attracted a lot of attention. They were of mixed breeds, Short-horns and Herefords. The steers, 223 head, average 1,384 pounds, sold at $8.15 and 90 head of 1,295-pound spayed heifers made $7.40. The removal of the tariff has opened up to Canadian shippers the markets of the United States, and that they are taking advantage of the generally favorable conditions existing at those markets is evidenced by the free movement now in progress. The Buffalo market is being rather more liberally supplied than any other, as Toronto is shipping to and through there at the present time a very considerable number, some of which are for immediate slaughter and others for distribution over Buffalo contiguous territory for feeders. St. Paul is getting quite a considerable number, more especially from Winnipeg.

The trade this week on stockers and lighter fleshed feeders has traveled in the opposite direction to the fat cattle market. Receipts of all kinds of light stock cattle have been heavy and there has been a surplus of most all classes as measured by demand. Practically everything in the stocker steer class shows 15@25c declines from a week ago, the exceptions being choicely-bred steer yearlings, few of which have been available at more than a 10c saving. Last week's declines checked the runs of heavy, fleshy feeders and killers came strongly into the competition for fleshy steers weighing upwards of 1,000 pounds, taking many cattle such as fell into feeder hands last week and at higher prices than then current, but the regulation medium weight, plain qualitied and lighter fleshed feeders with weight have cleared slowly at and below last week's bottom levels, and practically all classes of stock and feeding steers now show declines of 40 to 60c from best time around the month's opening.

The presence of Canadian stockers on eastern markets in good numbers has been a big factor in the depression of the trade here on thin young steers, withdrawing much demand in eastern territory from this market, while fear of an invasion of foreign beef in quantities that would prove harmful to the fat cattle trade is doubtless aiding in suppressing investment demand in feeders. That a continued upward trend of beef cattle values the next few weeks would do much to restore confidence in the stability of the trade, however, and result in a broadening demand and higher prices for thin cattle, is the general trade opinion.

Working in sympathy with the advance in beef steers and responding to the beneficial influences of colder weather, termination of the Kosher holiday period and modest supplies, the market for the more desirable grades of butcher cows and heifers shows an advance of generally 15@25c over a week ago, with some of the good killing heifer stuff up 35c. The advance was scored during the first half of the week and since maintained. A medium class of native grass cows selling downward from $5.50 is hardly more than 10@15c higher, while canners and cutters show less strength, packers having supplies of such classes direct from other points during the week which have been of material assistance in their efforts to side-step advances on such classes.

Fat heifer yearlings, the grain-fed baby beef kind, are finding hungry demand as evidenced by the sale at mid-week of right fancy heifer yearlings up to $9.40 and lack of discrimination against prime steer yearlings carrying heifer ends, some heifers being included in the yearlings that topped the week's trade at $9.70. There has been a paucity of choice grain-fed heifers in the run, however, and few have passed $8, a price that took prime heavy-fed heifers. Most of the medium to right choice grass and warmed up heifers of handy weight sold at $6.50 to $7.50, a four-car string of choice heavy Canadian sprayed range heifers reached $7.40 and a string of the Matador range heifers made $7.30 against $7.15 last week. Common to fair light grass native heifers sold down to $5.75 to $6.50 a scrubby, thin dairy bred sort down to $5. A few fat cows are reaching $7, though $7.50 or better is quotable for prime, but $6.25 to $6.75 has taken very good short-fed to choice fat beef cows and most of the native grass cows of plain to good butcher class sold at $5.25@5.85, few cutters reached $4.75 and canners sold downward from $4.25.

A break of about 30 to 40c per hundredweight is in evidence as the net result of the week's selling in the hog trade compared with closing values last week. It has not been a case of oversupply by any means and the depression may be ascribed to the plans and specifications of packers for establishing a lower cost of raw material on which to start winter packing. One year ago this month they were able to reduce the cost of hogs more than $1 per hundredweight during the month of October, and they evidently have a desire to see history repeat itself in this particular. Current prices of hogs are ranging about 50 to 75c below their cost at this time last year already, however, and it is not held that there is license for packers' buyers to proceed much farther with their bearish campaign this month, in view of the scarcity of hogs and high cost of corn with which to produce pork this coming winter. The close Friday was on the following basis of prices:

Bulk of sales	$7.60@8.10
Mxed, 210 to 250 lbs.	7.55@7:80
Mixed, 170 to 200 lbs.	7.60@7.80
Medium weights	7.80@8.00
Light butchers	8.05@8.20
Heavy butchers	8.05@8.25
Light shippers	7.95@8.10
Heavy shippers	8.00@8.25
Heavy packing	7.45@7.70
Rough heavy packing	7.30@7.45
Throwout packing sows	6.50@7.15
Fair to choice light	7.60@8.00
Light-light, 135 to 155 lbs.	7.25@7.65
Pigs, good to fancy	5.50@7.40
Pigs, inferior to fair	4.50@5.40
*Boars, inferior to choice	1.00@3.00
Stags, subject to dockage	7.75@8.40
Government throwouts	4.00@5.50

*Subject to government inspection.

Complexion of the live mutton supply is undegoing a radical change and one that is not for the better as concerns condition of the offering. Chicago had a few thousand head more this week than last, but the run was woefully deficient in point of killing quality, 75 per cent of the range crop consisting of feeders. Montana, Dakota and Wyoming cut loose a great job of their little lambs and their aged ewes and choice fat range lambs practically disappeared. The result has been a sharp advance in fat lambs, while common, little, thin stuff is sharply lower. Some little "pee-wee" 35 to 40-pound western lambs selling at $5 and lower are 75c lower than a week ago, while prime fat lambs, touching $7.65 at week-end are a big 50c higher than a week ago. Best wether sheep sold steady, while fat ewes had a 10 to 15c break and feeding ewes dropped 25c.

A number of loads of fed western sheep and lambs have shown up here this week most of them sans finish. That a pretty free movement of such stock will be witnessed during the next few weeks, due to sloppy condition of corn fields in many sections and to the high cost of feed, is expected, and the trade strongly advises against premature marketing of such stock wherever feeders are prepared to hold it for a finish.

Despite the bloom the fat lamb market is wearing as compared with a week ago, shippers should bear in mind that scarcity alone has made it possible. Conditions at this juncture are not ripe for a booming market. Buffalo slumped down to a $7.25 basis for best lambs Friday and if current prices, sloppy weather and the close approach of winter are not responsible for a much heavier run of native stock early next week than has been coming, the trade will be forced to admit that native ovine stock in respectable quantities is not in the country. The one bullish factor now is the practical absence of fat range lambs. Few more good lambs from the range are to be expected this season.

An authority on mule raising says "the best mule is produced from a light type of horse. A good mule-producing mare has a big head; is rugged, roomy, comparatively heavy bone, a good big foot, and is upstanding. The jack should be as high as possible, have a Roman nose, coarse bone, a big foot, and long ears."

Free Offer

A Cap, Gloves or Mittens

If you will send me a horse, cow, steer or bull hide to be tanned and made into a coat or robe I will do the work at a reduced price, and give you free either a cap, a pair of mittens or a pair of gauntlet gloves. I have reduced tanning to a science, having had 35 years' practical experience. I can make better prices on good tanning and finely finished coats and robes than other tanners and yet afford to throw in one of the above. My modern plant also enables me to make these reduced prices and this startling offer.

POISON and DEATH Lurk In Your Corn Fodder!

Prussic Acid Is The Great Danger Now Threatening Every Stock Raiser In America

State veterinarians and many editors of farm papers are issuing warnings against feeding corn fodder to stock, because of **prussic acid** which is always present in drouth-stunted corn stalks.

You do not need to be told that much of your corn was stunted in growth this year.

But you do need to be told that poison—**death to your horses, cattle, sheep and hogs—lurks in every corn stalk, whether in shock or left standing!** Unless the action of the deadly prussic acid is counteracted it often kills in a few hours. Many stock losses from this source have already been reported.

Every hog raiser knows too, the danger of feeding new corn to his **hogs**, especially as in this year it is chaffy and stunted. It causes one of the worst forms of indigestion and worms, and like cholera frequently wipes out whole herds in a few days.

I CAN PREVENT THAT LOSS

Let me **prove** to you, before you pay me a cent, that the deadly effects of corn fodder poison and of new corn fed to hogs are positively counteracted by giving your stock free access to **Columbian Stock Powders.**

The forage poison (prussic acid) and new corn cause acidity of the stomach and fermentation resulting in acute digestive troubles which quickly cause death. **Columbian Stock Powders are anti-acid and anti-fermentative.** Feed these powders and you can give your stock the free run of the fields—standing or in shock. All ill effects from eating the undeveloped corn and stunted stalks will be absolutely counteracted.

ColumbianStock Powders best for general stock feeding, exterminating worms, fattening hogs and preventing hog cholera.

Cattle Tone—A powerful, highly concentrated digestive tonic for cattle. The sure, quick way to turn corn into beef.

ColumbianSheep Powders—Especially prepared to keep sheep free from disease and worms, stop losses and increase profits. A wonderful appetizer and tonic. Counteracts acidity in fodder and silage.

COLUMBIAN STOCK POWDERS

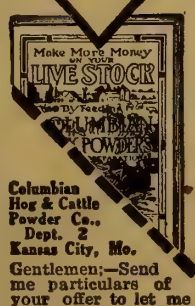
are not a food, but a highly efficient medicated preparation. They contain a powerful vermifuge and not only kill but expel all worms in hogs, horses and sheep. These strength-sapping, disease-breeding parasites are the cause of fully 90 per cent of all stock diseases. You must get rid of them in order to have thrifty stock. The only way to keep your stock vigorous, free from worms and disease and poison-proof is to treat them internally with Columbian Stock Powders. Will put a speedy end to all their digestive troubles, make them fat and sleek, and keep them in finest condition. Indispensable for brood sows because it keeps them free from fever, insures strong healthy litters and an abundant flow of pure milk.

A BIG PROFIT MAKER—NOT AN EXPENSE

Columbian Stock Powders are not only insurance against stock losses—they actually increase your stock profits. Enable you to fatten hogs with less feed and shorten the fattening period. Start feeding "Columbian" to your fall pigs now before cold weather sets in, so as to hasten their growth and insure more pounds of prime pork. In daily use by thousands of practical raisers who declare that "Columbian" has put stock raising on a permanently profitable basis for them.

Write For My 90 Days Free Trial Offer

Just write or mail coupon stating how many hogs, cattle, horses and sheep you are feeding and I'll make you an offer whereby you may try Columbian Stock Powders 90 days before paying me a cent. I absolutely convince you that it's big money in your pocket to keep on feeding them. This is the most liberal offer ever made on a proposition of this kind. Don't fail to take advantage of it.



Columbian Hog & Cattle Powder Co., Dept. 2 Kansas City, Mo.

Gentlemen:—Send me particulars of your offer to let me give Columbian Stock Powders a 90 Days' Free Trial before paying a cent. At present am feeding.....Hogs; .....Cattle; .....Horses; ..... Sheep. Also send me free, a copy of your book, "Make More Money on Your Live Stock" and particulars how to get a Columbian Self Feeder FREE.

Name.....

Address.....

FREE Our new book on hog and stock raising is just off the press—an intensely interesting and highly instructive book that you should read. Gives lots of valuable information and experiences of many of the largest and most successful stock raisers. Send coupon today for your free copy.

AGENTS WANTED

We want a few reliable farmers to represent us in every community. Our proposition unusually attractive—a big and sure money maker and the work is not hard. It will pay you to investigate. Write for particulars.

Be Sure To Mail Coupon Today And Get My 90 Days' Free Trial Offer. Address

FRANK R. McDERMAND, Pres.

Columbian Hog & Cattle Powder Company

1450 Genesee St. Dept. 2 KANSAS CITY, MO.

Columbian Self Feeder

Regular price is $5; but if you will write or mail coupon, at once I will tell you how to get one **FREE**

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep, to this office.

SILAGE GOOD FOR SHEEP.

To the Editor of The Homestead:

During the winter season when sheep are on dry feed a little succulent food is a great help to them. Whenever it is possible they should therefore be given some kind of green food in addition to grains and dry fodders. I do not believe that there is anything superior to good silage. It surpasses roots in feeding value, besides being grown more cheaply. As a food for fattening lambs it is my experience that the best results are secured by feeding it in moderate amounts in clean, wholesome troughs. Tight-bottom ones are best, since they may be cleaned easily and kept in a sanitary condition. A sour or unclean feeding trough will quickly put a flock of fattening lambs off feed. I always sweep the troughs out thoroughly before feeding, so that when the silage is put before the lambs it is in the best possible condition. Sour or moldy silage should never be fed to sheep or any other stock. If there is much grain in the silage care should be exercised that the lambs are not overfed on grain.

In my experience in feeding farm-grown roughage I have found that good silage puts flesh on fattening lambs more readily and at less cost than any other feed. At the present time I have on feed seventy-two native lambs of my own raising which were weaned the first of September and put on good pasture. As soon as the lambs began to eat grain they were given all they would eat up clean of equal parts of corn and barley. About the first of November they were brought to the barn and fed clover hay twice daily in addition to the grain ration. The first of December I opened the silo and gave them a little silage. The lambs took readily to the new feed and will leave the grain and bright clover hay for it. It is, of course, very important to exercise care in feeding silage to sheep or any other kind of live stock. Too much silage will cause scours in both lambs and old sheep. I find three pounds per head a day a sufficient quantity to feed. Breeding ewes should not be fed silage more than three or four times a week, at the rate of two pounds to each ewe at a feed with some grain. W. H. Underwood.

GROW MORE LAMBS.

To the Editor of The Homestead:

The farmer who will keep breeding stock and grow lambs of uniform size and breed will make good money if he feeds intelligently and markets them at the right time. Often when a flock of native lambs are sent to the market they are so badly mixed in breed and size that they are a torment to the buyer and not much profit to the owner.

One reason why the western lambs sell so well on the market is that they are more uniform in size. They are also of the same breed, as a general thing, and being fed in large bunches they are of uniform size. These lambs are grown on the range. They all come about the same week and get about the same attention, so are about the same size when put into the fattening pen.

The growing of lambs is simply a side issue on the average farm. It has not had the consideration it deserves. One old Scotchman said he could begin with ten good ewes and in ten years pay for the best farm in his county. He may have been exaggerating it a little, but he was a very successful grower of sheep and had gotten rich at the business. My experience with twenty sheep on a small farm has convinced me that there is no stock more profitable. At weaning time lambs have brought as high as four and five dollars. Twenty lambs brought in close to $100 and there was the wool from the flock. What kind of farm animals will beat this for the amount of money invested and the quantity of feed consumed?

One should remember that a flock of sheep will live on a weed or brush patch in the summer time. In the winter clover hay and a ration of oats will keep them in prime condition. Shelter them well and they will take less feed than any animal about the place. Sheep are not vicious with one another. They take little room. A shed ten feet wide and thirty feet long will shelter forty or fifty and sometimes even more. Subscriber.

THE EWES MUST HAVE CARE.

To the Editor of The Homestead:

The flock owner who breeds his ewes to lamb during the late winter and early spring months should provide favorable conditions at the right time. Severe losses result from attempting to handle early lambs without having adequate accommodations to provide comfort for the flock. The first essential to success in handling early lambs is a comfortable and well-arranged sheep barn. It should be well lighted, dry and properly ventilated, and there must be plenty of pens and facilities for caring for each ewe as soon as she shows evidence of lambing. We have found it desirable to keep on hand an adequate supply of light partitions and mangers for constructing pens for the ewes as fast as needed. In this way the flock can have the run of the whole sheep barn or it can be quickly sub-divided as the occasion may demand. It will be found very convenient to have a light manger that can be made fast to the corner of each pen, so that roughage may be fed regularly without being trampled under foot and made unpalatable.

Ewes should have plenty of good, nutritious food during the winter, not only to maintain a good flesh condition, but to nourish the unborn lambs. Roughage alone is not enough. A light ration of grain should be fed regularly. A proper mixture of oats, barley, corn and peas will give good results. For roughage, clover or alfalfa hay and ensilage will furnish about the right proportions of bulk and succulence. A wide range of diet stimulates a keen appetite and promotes the health of the ewes.

Premature birth of the lambs is a frequent source of trouble among flocks. Lambs that are dropped a few days before they are fully developed are weak and it requires painstaking care to nurse them along until they can be brought to their normal condition. Feeding frozen fodder or roots, or feeding too much salt to ewes that have not been salted regularly is the cause of much of this trouble. It requires a great deal of time and labor to save those lambs and get them started, but they are generally well worth the extra time that is spent with them. By placing the ewe and lamb in a pen by themselves and feeding the ewe sparingly for a few days until she regains her normal condition and the lamb is strong enough to take nourishment regularly thousands of those premature lambs could be saved. L. J. Meridith.

TO REMODEL AN ENGINE.

In a recent issue of your paper is an inquiry in regard to using an automobile engine for stationary work. The first thing our neighbor will have to do to remodel an automobile engine for farm work is to increase the size of the cooling tank, as the radiator on the automobile engine is not the proper design for stationary work, it being too small to keep the engine from overheating while it is operating under a heavy load. Get an old barrel and put a piece of galvanized screening over top of barrel, and fill it with the cooling water. Connect the barrel to the circulating system, taking the water from the bottom of the barrel just the same as the engine did from the radiator and then pump it through the water jackets of the cylinder and let it fall on the screening and back of the barrel. If his engine has no pump he need not buy one just because I mentioned pumping, for the thermo-syphon system is just as good if not better than the pump for his use, for the reason that his engine will be loaded and if this is the case the thermo-system is to be preferred above any other cooling system.

He had better put a throttling governor on his engine and not attempt to control the speed as it was controlled on the automobile, because we know that the operator of the automobile was always at his post to care for the variation in the load, when there was any variation. The engine, if used for stationary work will be left to take care of itself the most of the time and the variation in the load will be so great that it would require an operator for the engine to manipulate the speed control levers in order that the engine would not race when on a light load and to give it the required speed for heavy work.

In sawing wood, for instance, we may have a small stick to start with and then instantly change to a dry, hard stick twelve or fourteen inches in diameter. Everybody knows that it will require more power for the large stick than the small one. The reason I recommend the throttling governor and not the hit-and-miss is that the mechanical design will not have to be changed with this kind as with the hit-and-miss governor. If he puts the hit-and-miss governor on the engine it would have to be sent back to the factory and be rebuilt so that the exhaust valves would hook up when the engine was running without a load, and there would have to be a governor arranged in the fly wheel or some other convenient place on the engine in connection with a governor hinge for each cylinder, which would require a lot of time as well as a lot of heavy expense. If he uses the throttling governor it will merely have to be put on the intake manifold between the carburetor and the cylinders, and a belt wheel the size of the one on the governor shaft be fastened on the crank shaft of the engine so that the speed of the govenor will be the same as that of the engine. This principle of governing is the same as on the steam engine and several of the gasoline traction engines use it. Our friend can write to any of the standard governor companies and they will be glad to give him information and quote prices on their governors.

He must not think that if the engine that he is intending to purchase is rated at thirty horse power or whatever rated horse power it is, that it will still be the same horse power if he reduces the speed down to 400 revolutions. Probably the engine he has reference to has to run about 1,000 or 1,200 revolutions to develop its rated horse power. If he puts on a governor and reduces the speed down to about 600 or 650 revolutions per minute I don't see anything to hinder him having an all-around farm engine at very little expense outside of the first cost of the engine, for many years to come.

Ira W. Surritte.

Atchison County, Kan.

Farmers of the Northwest have a new source of supply in their movement to stock their farms with thoroughbred cattle, the new tariff measure operating in such a manner that the stock farms of Canada can be utilized for that purpose. About 260 pure-bred Short-horns from Emerson, Manitoba, are expected to arrive in Grand Forks Saturday.

THREE BIG PAPERS $1.25.

FIELD NOTES.

Aberdeen Angus bulls are advertised for sale by Chas M. Russell, Carroll, Iowa, on page 35.

J. A. Sage, Ankeny, Iowa, breeder of Shire horses, announces a public sale to take place December 9th.

If you want a good immune Duroc Jersey boar, J. F. Kerns, Holstein, Iowa, is advertising them for sale at $25 and $35 on page 37.

I. J. Wilson, West Branch, Iowa, is now selling good Duroc Jersey spring boars at $25. See page 37 and send him your order.

Two good Percheron stallions and some good Hereford bull calves are advertised for sale by H. D. Clore, Lucas, Iowa, on page 33.

Forty-five head of immune Poland China boars are advertised for sale by C. H. Porter, Eagle Grove, Iowa, at $30 to $50 on page 38.

W. R. Adams, Fremont, Neb., buys raw furs of every sort and pays liberal prices for them. Write him for information asking for price list No. 53. See page 13.

V. W. Harms, Fairbury, Ill., invites the attention of discriminating buyers to the Percheron and Belgian stallions and mares that he is offering. See page 34 for advertisement.

Geo. T. White, Dallas Center, Iowa, has cholera immune Duroc Jersey spring boars for sale. He quotes reasonable prices, has quality pigs and guarantees satisfaction. See page 37.

Well-bred Duroc Jersey boars are advertised for sale by Sol Frank, Sioux City, Iowa, at $25 to $50 and he has very good ones. He can very easily fit you out with a good herd boar, and at a reasonable price.

Buyers of Hampshire hogs will be interested in the advertisement of Paul William Jahn, Manilla, Iowa, on page 32. Mr. Jahn's pigs have all been given the double treatment and are cholera immune. Write him for prices.

Jos. Shradel, Riverside, Iowa, has some Duroc Jersey May pigs, long, heavy-boned boars and gilts of good strains, which he is offering for sale to Homestead readers in his advertisement that appears on page 37.

M. P. Hancher, Rolfe, Iowa, is advertising fifty head of immune boars, sired by Smooth Wonder 2d, Chief Price Jr. and Chief Again Price on page 38. Read his advertisement and write him an order for one of these at once.

A recent note from A. Kool, Cordova, Iowa, advises us that he has added to his herd of Poland Chinas a fall boar sired by Big Orange and from a dam of Colossal breeding. This hog is to take the place of Jumbo now offered for sale.

On page 38 of this issue of The Homestead will be found the advertisement of F. J. McKeever, Ryan, Iowa, offering Tamworth spring boars for sale. These boars weigh from 150 to 200 pounds and Mr. McKeever is quoting them at from $20 to $25.

James Cockerton, Whiting, Iowa, advertises a splendid yearling Poland China boar by Big Wonder, for sale that he will take $60 for and twenty head of spring boars, big, lusty, big-boned fellows, that he will sell from $30 up. See his advertisement on page 38 and write him at once.

Clarence White, Linden, Iowa, will hold a public sale on the 7th of November, at which time he will sell the Poland China boar, Montrose 190187, a mature animal of choice blood lines, a reliable breeder and of high individual merit. Any additional particulars may be learned by addressing Clarence White, Linden, Iowa, as per advertisement on page 32.

Wonderful cures of various affections of horses are made by the use of Corona Wool Fat, an advertisement of which will be found on another page. While it is good for all cuts or bruises, it is particularly adapted to the cure and treatment of hard and contracted feet, mud fever, split hoofs, corns, grease heels, thrush, quarter crack, cuts, barb wire wounds, etc. Every can is sold under an absolute guanantee and it is no usual guarantee. The manufacturer believes he knows what his preparation will do. He backs it, we believe, by offering to send a can of Corona Wool fat to any reader of this paper with the understanding that it may be paid for after twenty days' free trial if it proves satisfactory. If it does not there is no charge. To take advantage of this offer fill out the coupon on page 40 and forward to Corona Mfg. Co., 1101 Corona Block, Kenton, Ohio.

Forty choice Shropshire rams are offered for sale by Davenport & Mack, Belmond, Iowa. One imported Cooper ram is listed in this bunch. Write the above firm about these rams at once and if you want one or a bunch you had better get busy with your order. When writing them kindly mention The Homestead.

An innovation in the way of reading lamps is the Air-O-Lite which is advertised on page 21 of this paper. It is guaranteed to be economical, safe and a splendid light. Agents are wanted to sell this light. It is reasonably cheap and big profits may be secured. For terms and territory address Guy Hunter, 351 Twelfth St., Des Moines, Iowa.

Frank Kean, Mount Pleasant, Iowa, in furnishing copy for his advertisement offering Duroc Jersey boars, gilts and brood sows for sale, writes: "I have a few spring boars and gilts and tried sows on which I am making a low price to move them. Those wishing good Duroc Jerseys should see them or write me for further particulars." See advertisement on page 37.

Silas Igo, Indianola, Iowa, is offering some splendid Duroc Jersey boars for sale at $35 each and the first man who sends an order gets the best of these. Don't delay, but get to him with your order right away. He also offers a splendid breeding boar for sale in a son of the grand champion, Crimson Wonder Again, and old H. A.'s Queen. Write him right away about these boars. See page 37.

T. A. Stevenson, Shannon City, Iowa, breeds Chester White hogs and is offering spring pigs of both sexes for sale. He writes that he has the finest lot he has ever raised and that he has been raising the best hogs of the breed that money would buy for the last twenty-five years. Write him for prices. Address T. A. Stevenson, Shannon City, Iowa. See advertisement on page 36.

W. W. Scott, Calamus, Iowa, is proprietor of the Cedar Lawn herd of Duroc Jersey hogs. He has spring pigs of both sexes for sale and advertises them on page 32. These are the get of Ensign 2d, B. & C.'s Perfection and Proud Ohio Chief 3d, each of which, it is unneccessary to say, represents a highly popular strain. For strictly good stock at reasonable prices write to W. W. Scott, Calamus, Iowa.

Geo. M. Fox, Dallas Center, Iowa, who breeds high-class Berkshire hogs, on page 35 announces that he has for sale a herd boar and a number of spring pigs. This hog is Michigan's Best Boy, a son of Lord Lee 56th, and from a dam whose lines of breeding are equally as strong and highly popular. The hog has size, big-type, and is in excellent condition. For prices or other information write to the address named.

G. H. Tutt, Marathon, Iowa, breeder of Chester White hogs, well known to readers of this paper, advises us that his herd has successfully gone through the double treatment and may now be considered immune and in good health. He has for sale in particular a choice lot of spring boars that have size and quality enough to head good herds, and so represent the most prominent blood lines. Write him for any further information.

B. B. McAlister, Blakesburg, Iowa, is advertising Duroc Jersey boars and gilts for sale on page 32. They are in healthy condition, but are not carrying fat. They will weigh from 150 to 200 pounds and are sired by such boars as Chief Jewel, Commodore Chief and a son of I Am McNeil's Model. The dams are Model Queen, Flossie and others. Mr. McAlister is making attractive prices on these pigs. When writing him mention The Homest ad.

In the last issue of this paper H. F. Funke, Greenfield, Iowa, advertised that he had for sale a select herd of Short-horn cattle. In this advertisement a statement was made that among the cows in the herd is Lavender Bud that cost him $25. Of course, this amount is wrong. The printer made a mistake. The figures should have been $625. For particulars with reference to the animals to be sold write to the address above named. See the advertisement on page 35.

Geo. T. White, Dallas Center, Iowa, is offering for sale some extra good Duroc Jersey boars of spring farrow. They have plenty of size and good quality. They have good make-up, being strong on foot and with well-arched backs. As to blood lines, they carry the most popular strains of the day. Mr. White will be glad to quote prices on them. He has lately added to his herd a herd boar by Golden Model 2d and from a dam of the strong Crimson Wonder blood.

G. F. Marshall, breeder of Poland China hogs, Monroe, Iowa, writes in a letter of recent date as follows: "I want readers of The Homestead to know that my herd has not had any sickness, but is perfectly safe. I have had all my hogs immuned. I have three as good fall yearlings herd headers as can be found. They are big and smooth. I shipped one to Illinois and the breeders over there who saw him say he is great. The other three are just as good. They are sired by Giant King. I have three fall yearlings sired by Jumbo and out of the dam of Giant King that are extra good. I also have spring boars by Big Bone, Big Knox, and Columbus. I have fifty sows, mostly fall and spring yearlings, that will be sold, bred or not as purchaser may wish." Mr. Marshall invites personal inspection of his herd. Address inquiries to Geo. F. Marshall & Son, Monroe, Iowa.

Plastic stove lining which is advertised on page 21 is a preparation which can be used for backs or linings for any cook stove or heater. It hardens when the fire starts and outlasts iron linings many times. It is also a means of saving fuel. Note the advertisement and send orders to Plastic Stove Lining Co., 1349 W. 35th St., Chicago, Ill.

An interesting announcement by B. W. Little, Janesville, Wis., breeder of Short-horn cattle and Duroc Jersey hogs will be found on page 36 of this paper. Mr. Little's herd of Duroc Jerseys is one of unusual excellent. His foremost boar is Ohio King 88193, an illustration of which will be found on page 30. Ohio King is by Albany Again and his dam was Cherry Chief Girl, a full sister to the noted Cherry King. For prices or description of animals write to B. W. Little, Janesville, Wis.

America's best fashion guide is the expression used to describe the Philipsborn Style Book advertised on page 21 of this paper. In addition to being a style book this publication is also a catalog of bargains in every variety of clothing and furs for ladies. Note the extraordinary low prices quoted on a few items in the advertisement. The style book is a means of economy, as well as enabling one to dress correctly. Get a copy of it. It is sent postpaid to any address on request to Philipsborn, Dept. 109, N. W. Corner Van Buren & Peoria Sts., Chicago, Ill.

Cushman farm engines are advertised on page 8. The Cushman is the original binder engine and its excellence in that feature has been the means of bringing it into the highest popularity as an all-purpose farm engine. The little four horsepower engine illustrated in the advertisement is guaranteed for ten years. The manufacturers say that it does everything that any other four horsepower engine can do. It is particularly well adapted to household uses, such as running the washing machine and cream separator. For catalog write to Cushman Motor Works 2029 N Street, Lincoln, Neb.

Grinding feed is only one of the measures which may be taken to increase its digestible condition. The Quaker City mills advertised on page 12 grind quickly and with any degree of fineness. These mills are made in twenty-three sizes, ranging from the little hand grinder to that which requires a twenty horsepower engine. They are shipped to any reader of this paper with freight prepaid on a ten days' trial. They are guaranteed to grind corn separate or mixed and from the finest to the coarsest grains. For book of valuable information on the subject of grinding and description of the Quaker City mills address A. W. Straub Co., Dept. G, 3723 Filbert St., Philadelphia, Pa.

A. Kool, Cordova, Iowa, announces on page 39 that he is now offering for sale his herd boar, Jumbo 185275. This is a two-year-old hog that Mr. Kool has used as long as he can advantageously, so he now wants to sell him and will quote a reasonable price. He is a big fellow and stands in the big-type class from every point of view. His sire is The Big Orphan, son of Big Columbus and grandson of Big Bone. His dam was a daughter of A Wonder and his grandam a daughter of SurpriseWonder 5th, so it will at once be recognized that the blood is that which has made fame for both the Miller and Mouw herds. The hog will weigh nearly 900 pounds. For particulars write to A. Kool, Cordova, Iowa.

Live stock men who have given the subject careful consideration realize that animals do best in winter when provided with comfortable quarters and protection from extreme weather. The principle applies just the same to the food stuffs given them. Feed which is icy cold or freezing water both tend to decrease the vitality of the animal and increase the amount of feed required to keep up a normal condition. For this reason the use of a good tank heater which provides water of an agreeable temperature is a money saver on every farm. The Cow Boy tank heater advertised on page 11 has merits peculiar to itself, all of which may be learned by sending for descriptive folder, addressing request to The Wills Manufacturing Co., 30 Seventh St., Mendota, Ill.

It is a pleasure to see and a greater pleasure to own a fine working herd of dairy cattle. Such a herd is owned by S. W. Dexter, Kenosha, Wis. For thirty years the Dexters have been breeding Guernsey cattle. They have always used pure-bred bulls, so that their herd is practically of pure Guernsey blood, although not subject to register. They have had some very famous bulls in their herd, for they have not spared time or money when looking for a bull of great dairy breeding. A recent herd bull is Shamrock of Day 16350, a son of Imported Pride of Day, the celebrated island bull. His dam was Imported Shamrock of Les Vesquesses VII., a cow of great ability. The present herd bull is Lillian's Kedge Anchor 20361. He was sold for $25 when ten days old. He is not yet three years old, but weighs 1,500 pounds. His sire was Kedge Anchor of the Glen and his dam, Imported Lillian of the Boullion. Mr. Marsh, of Waterloo, Iowa, refused $1,200 for her. The females of the herd are of fine dairy conformation, and excellent performers at the pail. Private tests show some fine records, and is additional proof of the value of good breeding. There are several bull calves for

sale from these cows and sired by the above bulls. See advertisement on page 19 of this issue of The Homestead.

M. T. Love, Garner, Iowa, is offering for sale an excellent yearling Guernsey bull and one four months old. He is quoting remarkably low prices on them. For further particulars or description write to the address named. See advertisement on page —.

Readers of this paper who want the biggest and best Poland Chinas of either sex are referred to the advertisement of W. F. Drummy on page —. He has spring pigs of the big, smooth make-up, easy feeders and excellent lines of breeding. They are sired by Big Bone Wonder (a grandson of Big Bone, the famous Gallman hog) and Wonder D. (a son of Fesenmeyer's A Wonder.) The brood sows, dams of the pigs offered for sale, are by Big Bone, Long Wonder 2d, Long Hadley and Chief Jumbo. These pigs will weigh 160 pounds and upward and will be sold at from $25 to $30 each. There has been no cholera in the locality. The first check gets the choice of the lot. Address W. F. Drummy, Ryan, Iowa.

The fact that a million copies of the Studebaker almanac are distributed yearly is the best testimonial as to its value. This almanac has been popular for ten years or more and each year shows a growing popularity. It is invaluable to the farmer because of its wealth of hints on dairying, seeds, fencing, fertilizing, fruit, stock raising, grain growing, implements, legal advice and general household and farm notes. In addition there are the usual monthly tabulations and weather forecasts. Of course the publication of this almanac is auxiliary to the business of the Studebaker Company in the manufacture of farm vehicles. Copies of the book may be obtained by addressing a request to the Studebaker Co., South Bend, Ind.

Smith Bros.' Polands.

Smith Bros., Lawler, Iowa, are advertising Poland Chinas on page 38. They are sired by Big A Wonder an eighteen-month-old boar weighing 725 pounds. This boar has a ten and three-quarters inch bone and breeders who have seen him say that he is as good a hog as they have ever seen. The dams of the boars they are offering weigh up to 700 and 800 pounds. The pigs they are offering will weigh from 200 to 275 pounds, many of them having an eight-inch bone and plenty of quality along with it. This is an opportunity to get a good boar pig cheap as they are pricing these pigs worth the money. Write for prices mentioning The Homestead.

Jones' School of Auctioneering.

The winter term of the largest and oldest school of its class will open December 8th, the Monday following the International Live Stock Exposition, and students will be given the benefit of four days' free admission to the show. The Jones school fits students to successfully pursue the auctioneering profession, and its graduates are now operating in all sections of the country, many of them making incomes that run well into many thousands of dollars each year. Full particulars regarding this thorough school are contained in the handsomely illustrated catalog, which will be sent to any address if you mention this paper, and address Jones National School of Auctioneering, 14 North Sacramento Boulevard, Chicago, Ill. The advertisement appears on page 35.

Clean Seed Means Large Yields.

It is with a great deal of satisfaction that a farmer looks out over his fields of grain and notes the uniformly well filled heads which are naturally produced as a result of cleaned and graded seed. When all the dirt, trash and bad seed are taken out it is reasonable to expect that the yield per acre will be larger than it otherwise would have been, the clean seed having been uniformly distributed over every piece of ground. On page 11 of this issue will be found an advertisement of the Maytag Hawkeye Grain Grader & Cleaner, manufactured by the Maytag Company, 400 North St., Newton, Iowa, They say of it: "Grade and clean your seed wheat, oats, any grain, with a Maytag Hawkeye Grader and Cleaner; and if you can tell us, after harvest, that it did not make an increase in your yield —more than enough to pay for the grader—we'll return your money." We would suggest that our readers see their dealers or write to the factory at Newton for further information.

S. W. Swanson's Last Call.

On November 7th, at Red Oak, Iowa, S. W. Swanson will sell fifty head of Duroc Jersey boars and sows, and he will have a nice offering for the boys at this time. There will be fourteen fall boars in the sale and thirty-six spring boars. The remainder will be sows and gilts. This is one of the last real hog sales of the season and will afford a good chance for late buyers to pick up either a good young male or a few head of sow stuff. Mr. Swanson has been buying quite a lot of good stuff to place in his herd the past couple of years and he is now better fixed than ever to offer the breeders and farmers high-class Durocs. The herd is strong in the blood of the Col. Crimson Wonder, Cross and the stuff is making good. For some time Mr. Swanson has kept at the head of his herd the big boar, Model King. This hog is a son of Hogate's Model, a champion boar at the Nebraska State Fair a few years ago. The get of this boar are the big, strong-boned kind with proper care and have a right to be as Model King is one of the big boars. The new blood in the herd is the get of Col. Gano, King The Col., Crimson Wonder Again and a few others of equal worth. Mr. Swanson expects no sensational prices and red hog buyers whether breeder or farmer will find this a good place to select their stuff. Write Mr. Swanson for a catalog at once and when sending for it address him at Newton, Iowa, but remember the sale will be held at Red Oak, Iowa.

Holsteins for Sale.

On page 18 C. E. Veak, Essex, Iowa, advertises high-grade Holstein Friesian cows and heifers for sale. These range in age from two to five years, and are well along in calf. He is pricing these where they will sell. Write him at once and mention The Homestead.

White-Agan Poland China Sale.

On Saturday, November 1st at Malvern, Iowa, Georg H. White, of Malwill sell forty-five head of boars and sows and these boys are putting up a splendid offering. Remember this sale will be on Saturday of this week at Malvern, Iowa, and it will be a good place to buy boars and sows of the large-type Poland Chinas.

Immune Poland China Boars.

On page 39 L. R. McClarnon, Braddyville, Iowa, advertises thirty head of immune Poland China boars for sale sired by the great boar, Colossale, and he is selling these at $35 each as long as they last. They will weigh from 250 to 300 pounds, ten of them will weigh 33. White Mr. McClarnon at once about these and mention this paper.

Barrs' Poland China Boars.

If you want a good Poland China boar write W. H. Barr & Son, Elliott, Iowa. They are offering a good two-year-old for sale in Mastodon Prospect and he is a son of that splendid boar, B.'s Mastodon. They have three good fall yearlings and twenty spring boars that they are offering for sale. The spring boars they are pricing at $35 each. Write them at once and mention The Homestead. See advertisement on page 38.

Lonergan Offers Herd Boars.

The Poland China man that wants to buy a good herd boar should get in touch with D. C. Lonergan, Florence, Neb. He is offering to sell Big Omaha, a two-year-old boar by Big Victor and out of Alm's Choice, King Giant a son of Prospect 2d and out of a Giantess sow, and Metal Hop, a son of I Am Big Too and out of a Bell Metal sow. These are three splendid herd boars and he will sell them right. He also has eighteen good spring boars on hand that are for sale, and he will sell twenty head of splendid gilts at private treaty. If you are interested in any of these write Mr. Lonergan and kindly mention The Homestead.

Percherons and Herefords For Sale.

On page 33 H. D. Clore, Lucas, Iowa, advertises one splendid two-year-old Percheron stallion for sale and one good yearling and he offers the two of these for $1,000 if taken soon. Here is a decided bargain for the farmer or the breeder who wants to buy a couple Percheron stallions. There is good money in these horses for some man to buy and sell again. He also offers some good Hereford bull calves for sale. Write him at once and mention The Homestead.

De Kalb's Hampshire Sale.

At Council Bluffs, Iowa, on November 4th, H. D. De Kalb, of De Kalb, Iowa, will make a public sale of sixty head of the best Hampshire boars that have ever been listed for a sale since this breed came so prominently into public notice. Harve De Kalb has today one of the very best herds of Hampshire hogs in this country and he has made the highest priced sale that was ever recorded for this breed. From this herd also comes the highest priced sow that was ever sold at either public or private sale, so you must remember he has a herd that all the boys are looking up to. He is selling twenty-five head of yearling boars in this sale that are sired by his world-renowned boar, Major, that stands today as one of the greatest breeding boars of the Hampshire breed. Some of these boars are out of or are closely related to that highest priced sow we spoke of above, and these are good enough to head any herd. Included in this sale will be De Kalb's King 50th, a son of the great and only Major and out of Nellie Aylor's Best, and he is unquestionably the best boar that has ever been offered in a public sale. Here is a boar that the best breeders should go after to head their herd. He is also listing two of his best herd boars and twenty-five head of spring boars. If you have not got the De Kalb catalog you ought to have it right away. Write H. D. De Kalb, De Kalb, Iowa, for it at once and kindly mention this paper. Remember the sale will be held at the Kiel Barn, Council Bluffs, Iowa, on November 4th. Bids sent to our M. T. White, representing this paper in care of Mr. De Kalb will be properly looked after on day of sale. On day of sale you can wire Mr. White in care of Mr. De Kalb and it will reach him in time for sale. See advertisement on page 30.

Ficke's Duroc Sale.

Hugh M. Ficke, Long Grove, Iowa, will sell thirty-six head of Duroc Jersey boars at public auction on November 11th. All are spring boars with two exceptions. Some of the spring boars will weigh 300 pounds and all have plenty of size for their age. The entire herd has had the simultaneous treatment and therefore is cholera immune. Write Mr. Ficke for a catalog and arrange to attend his sale.

Funke Closing Out Short-horns.

The breeder of Short-horns who wants to buy a select lot of Short-horns should read the advertisement of Henry Funke, Greenfield, Iowa, on page 35. He offers twenty-eight head of richly-bred Scotch cattle as good as you will find anywhere in the West. There are not better, but as he has sold his farm he must close out the herd. Here is a great bargain for somebody. When writing him kindly mention The Homestead.

Polled Durham Bulls For Sale.

Those of our readers who want Polled Durham bulls should write or go and see W. H. Barr & Son, Elliott, Iowa, whose advertisement appears on page 38. They are offering two good young Polled Durham bulls for sale and their splendid herd bull, Crowder, that is one of the best bulls in the state. This bull was bred by John Robinson, of Harlan, and has since been used in the Barr herd with the best of success. He is a three-year-old coming four and is a splendid breeding bull. They also have one nice Short-horn bull for sale.

Iowa Holstein-Friesian Sale.

As will be noted in the advertisement on page 18 the combination of Iowa breeders of Holstein-Friesian cattle announce a public sale to take place at Waterloo, November 17th and 18th. They include matured cows, heifers and bulls. All have been given the tuberculin test. They are such animals as both farmers and breeders can use to advantage. Some of them are cows with official records of up to 600 pounds of butter in one year. Others are descendants of equally great producers. Catalogs giving complete particulars may be had by addressing a request to Iowa Holstein-Friesian Sale Co., Waterloo, Iowa.

Hancher's Immune Boars.

Those of our readers who are wanting immune Poland China boars should read the advertisement of M. P. Hancher, Rolfe, Iowa, on page 38. He has a grand lot of big, lusty, spring boars sired by Smooth Wonder 2d, Chief Price Jr., Chief Again Price, and out of his most famous big-type sows. Sixteen sows in the Hancher herd farrowed 161 pigs last spring, an average of over ten to the litter. If you want an immune boar from such litters write Mr. Hancher at once and mention The Homestead.

Chester Whites of Merit.

Elsewhere in this paper our readers will find an engraving showing the Chester White hog International Boy owned by J. L. Barber, of Harlan, Iowa, This hog stands at the head of Mr. Barber's herd and is now offered for sale. The picture shows very clearly that he is a hog with remarkably good proportions and excellent development, and a gentleman who has visited many herds insists that he is a splendid show prospect. Inquiries concerning him should be addressed to J. L. Barber, Harlan, Iowa. See page 13.

Walker & Son's Polands.

Those of our readers in search of a rarely choice Poland China boar will do well to buy from a herd with a reputation for producing the good ones, and from a herd that turns out a product that can be depended upon. Such a herd is owned by Thos. F. Walker & Son, Alexandria, Neb. This herd is one of the oldest in the state, is one of the best known in the entire country, and that has produced boars that have done a great work in all the leading hog states of the Union. Walker & Son still have some choice boars by the great Blue Valley and also some by Blue Valley's Orange by Big Orange. This last named boar is the top boar in the James sale a year ago and was sought by the best breeders in the country. If in search of Polands that are big, that are good producers and that have quality, write these gentlemen. They have what you are looking for. Kindly mention The Homestead. See page 39.

Registered Draft Horses.

E. P. Hamilton & Sons, Garden Grove, Iowa, announce on page 34 that they have for sale a number of road and draft stallions and mares at reasonable prices. Their line of draft horses includes Percherons, French Draft and Belgians. The farm is located less than three miles from Garden Grove and LeRoy, and may easily be reached from either place.

McDowell's Sale November 1st.

On Saturday, November 1st at Chariton, Iowa, E. E. McDowell, will sell forty-five head of his large-type Poland China boars and sows, and he is selling a splendid lot. There will be thirty head of large, lusty spring boars and fifteen choice gilts in the sale. Remember this sale will be held at Chariton, Iowa, on Saturday of this week, so go there if you want some good bargains.

Hanks & Bishop Offer Duroc Boars.

Hanks & Bishop, New London, Iowa, have been enjoying a good trade in boars this fall and only have twenty left and among them are some of the best ones they raised this year. These boars will weigh around 200 pounds and are sired by three great herd boars, Model Wonder, Wonder's Model and Proud Col. These pigs are of the same breeding as the winners that this firm has shown at the Iowa State Fair during the past five years. They are making prices very reasonable in order to move these boars and it would be to the interest of anyone needing a boar to write them at once, mentioning The Homestead. See page 37.

French's Belgians.

R. F. French, Independence, Iowa, is offering high-class imported Belgian stallions and mares for sale on page 34. Mr. French won several important prizes at the recent Iowa State Fair which shows the high quality of the stock he handles. His horses are doing fine at the present time and the mares are showing safe in foal. He has twenty head of imported mares that are safe in foal to the best imported stallions. Among these mares are his state-fair winners as well as several prize winners in Belgium. His stallions are doing fine and those he had in the stud proved very sure. Write him your wants mentioning The Homestead.

Iowana's Champion Boars.

The boars at the head of the Iowana herd of Berkshires, Rival's Champion and Baron Premier Rival, are both champions, the latter named boar having carried away the honors at this year's American Royal, at which show entries from the Iowana pens were successful in all the classes. The Iowana Berkshires have been one of the potent factors in the Berkshire shows at the majority of the big fairs this fall, a fact that speaks strongly for the superiority of this herd. Boars and gilts of spring farrow, all of them cholera immune, are for sale at the right kind of prices, quality and breeding considered, and all correspondence addressed to the manager, J. L. Thatcher, Davenport, Iowa, will receive prompt attention. See page 35.

Sealock's Immune Chester Whites.

The other day we called on C. F. Sealock, Neola, Iowa, one of the younger breeders of Chester Whites, who is busily engaged in establishing a good herd, and he is now offering a few good boars for sale. He has a most excellent hog at the head of his herd in Combination Again, a son of the great and only boar, Combination, and he is out of a daughter of Iowa Recorder. This boar is one of the really choice herd boars today in the state, and is one of the best sons of old Combination we have ever seen. He is offering a good yearling by this boar, and he is out of Miss All Right by Iowa Protection. This boar will make a good hog and the first man that sends $40 will get him. He also has a number of good spring boars and these are sired by Teddy B., and Max, and on these he is quoting prices of $25 if taken soon. These boars are all immune and are cholera proof. If you want one of these write your order to Mr. Sealock and kindly mention this paper. See page 36.

A Noted Holstein Herd.

One of the most noted Holstein breeders of Wisconsin, Tompkins Wright, Waupun, has developed some very remarkable animals. Mr. Wright has but a small farm and a comparatively small-sized herd. He has not won his reputation on the largeness of his herd, but by the records which they have made as individuals and as a herd. He is a great believer in official and semi-official testing, but says that the seven-day records are so easy of inflation by forced feeding, that it cannot be taken as the true criterion of a cow's ability. With this in mind he has conducted yearly tests for many years on nearly all the milking females in his herd. A bull, Leland Sunbeam Korndyke 86951, which he has sold recently, has the peculiar distinction of having yearly records back of him for five generations. His full sister, Leland Sunbeam Perfection, under the most unfavorable conditions made 14,500 pounds of milk and 565 pounds of butter at two years of age. Five of his sisters hold yearly records which average 11,667.1 pounds of milk and 520 pounds of butter. His dam, Leland Sunbeam, as a senior three year old made 17,643.4 pounds of milk, 716.8 pounds of butter. His grandam, Leland Maid, in one year made 19,143 pounds of milk and $14.20 pounds of butter. His great grandam and great

NEXT WEEK'S SALE PROGRAM

Monday, Nov. 3	Poland Chinas, Obadiah Prettyman, Fairfax, Mo.
Tuesday, Nov. 4	Aberdeen Angus, M. A. Judy, Mgr., South Omaha, Neb. Hampshire boars, H. D. De Kalb, Council Bluffs, Iowa. Poland Chinas, Chas. W. Phillips, New Sharon, Iowa.
Wednesday, Nov. 5	Poland Chinas, H. O. Williamson, Herman, Neb. Durocs, S. W. Swanson, Red Oak, Iowa. Durocs, J. R. Blackburn, Ord, Neb. Holsteins, Ayrshires, Duroc and Hampshire swine, Wm. Galloway, Waterloo, Iowa.
Thursday, Nov. 6	Poland Chinas, L. B. Williams & Son, Sciola, Iowa. Holsteins, Ayrshires, Duroc and Hampshire swine, Wm. Galloway, Waterloo, Iowa.
Friday, Nov. 7	Short-horns, S. A. Nelson & Sons, Malcolm, Neb. Poland Chinas, S. A. Nelson & Sons, Malcolm Neb.

great grandam, Leland Pride Echo, and Leland Pride, made 555.5 pounds of butter and 471 pounds of butter respectively, which at the time they were made were wonderful records, as at that time intensive dairying was not understood as it is today. His dam won the Hoard's Dairyman prize in February, 1910, and his grandam won it two months before in December, 1909. His great great grandam, Alacarta 2d Rose, is also grandam of Pontiac Alacarta, the $10,000 bull. The breeding on the sire's side is of Johanna Korndyke strains, while on the dam's side it is Leland Alacarta breeding. This bull is being advertised for sale. When writing Mr. Wright kindly mention this paper.

Naiman's Boars Now Immune.

John L. Naiman, Alexandria, Neb., is now offering readers of this paper immune Poland China boars and in his letter to us he says that he will make good any boar that dies of cholera. This is a very strong guarantee and readers of this paper, that have been bothered with sick hogs will find that here is about what they have been looking for. Mr. Naiman also offers the herd boar, Naiman's Expansion, one of the best Expansion boars that can now be found. He is a sure breeder and a sire of the right sort of stuff. These boars should sell rapidly from now on, and we would suggest that those that are interested write without delay. Kindly mention this paper when you write. See advertisement on page 39.

Last Call for Blackburn's Sale.

The sale of Durocs that will be made by J. R. Blackburn, Ord, Neb., on November 5th, is a sale that it will pay to attend if in search of some choice Durocs. They are all immuned and of the very best of breeding, and individuality. We have described these boars in detail in The Homestead of previous issues, and no doubt most breeders have the catalogs ere this, but we are going to add that this being one of the last sales of the season where a high-class lot of stuff will be offered, it will be a good place to spend a day. The boars are nearly all sired by Crusader Col. by Proud Col. and he was the champion bear at Sioux City a couple of years ago and a full brother to the champion of Iowa, Freed's Col. There are about six boars in this offering that are really choice enough for a top herd of pure breds, and the remainder are toppy boars for farmers' use. Many breeders will buy poorer boars than the ones mentioned that are suitable for farmers, but we want to say that those looking for a really top boar will find a half dozen in this sale. If not attending, send bids to J. C. Price, representing Homestead. See advertisement on page 36.

Grain Sprouter Valuable to Poultry Raisers.

All poultry raisers know the value of green food for poultry, but it is said that sprouted oats have many advantages over any other green food as an egg producer and cheap feed provider during the winter months when eggs are highest in price and the greatest profit from poultry should be obtained. It is also claimed that sprouted oats stimulate greater activity among the birds, thus increasing the fertility in winter eggs, enabling poultry raisers to hatch a higher percentage of early chicks. In this issue on page 20 appears an advertisement of the Successful Grain Sprouter, manupfactured by the Des Moines Incubator Company, 586 Third St., Des Moines, Iowa. Their literature indicates that this sprouter is entirely different from any other and seems to have points of exceptional merit. It is built in sections which enables the poultry raiser to purchase the base and one or two sections at first, and then later on, when the requirements demand it, one can increase the capacity for green feed by purchasing additional sections. We believe our readers will find it advantageous to secure additional information on this new green poultry food producer and we suggest that they write the Des Moines Incubator Company at the above address.

Jos. Rousselle & Son's Horses.

The writer recently called on Jos. Rousselle & Son, Seward, Neb., and were pleased with the fine lot of horses that we saw on our visit. These gentlement are natives of the old country, of France to be exact, and they surely understand the Percheron and Belgian situation. They are able to buy cheaply, on account of knowing the people and where to go to find the good horses and, of course, a native countryman is able to make better deals than one from another nationality would be able to effect. They have a very fine lot of horses on hand at this time, and while they have sold several, they have not as yet topped the bunch. Homestead readers looking for a real toppy colt will be able to find what they are looking for in a toppy two year gray. He is one of the best horses of his size that we know of. Those that are in search of a real big one with lots of quality will be pleased with a big black yearling. He is one of the best horses of his size that we know of. Those that are in search of a real big one with lots of quality will be pleased with a big black yearling. He is one of the best yearlings that we have seen in a long time. He is sound all the way through and the making of an immense horse and will have a lot of quality at maturity. This black colt will make a good horse for someone that will have pure-bred mares to breed. A pair of real classy Belgian stallions are on hand, one a sorrel and the other a bay and while two types, they will each find admirers. Rousselle & Son are very particular to import none but sound horses, and they absolutely guarantee everything they have for sale. These gentlemen say that they will save buyers some money on a good horse this season, and the way they have been selling them is pretty good evidence that they do it. If interested, kindly mention The Homestead and address as above. See advertisement on page 33.

STONE'S GREATEST
ABERDEEN ANGUS CATTLE SALE
WILL BE HELD IN LIVE STOCK SALE PAVILION
KANSAS CITY, MISSOURI, FRIDAY, NOV. 14, '13

50 Head: 9 High-class Bulls, 31 Superb Females. 50

THE nine bulls are good, a Trojan Erica and a K. Pride are sure herd headers. There is not an inferior bull in the lot. Twenty-one cows, nearly every one with calf at foot and rebred. They are the kind that produce top stuff. Nineteen two-year-old heifers all sired by my K. Pride herd bull, Kissinger 141961. There has not been offered in recent times such an array of females. There will be several K. Prides, daughters and granddaughters of the grand old Imp. Pride of Gartley 2nd, the foundation of my K. Prides. A nice bunch of Trojan Ericas, four daughters and granddaughters of Imp. Eppy of Finlarg, the foundation of my Trojan Ericas. Four daughters and several granddaughters of the good old Imp. Joyful Girl of Theakston, the foundation of my Lady Idas. (Chas. Escher, Jr., says she is one of the best Lady Idas that ever crossed the water.) Daughters and granddaughters of Imp. Abbess of Benton 4th, the foundation of my Abbess tribe and a nice string of Easter Tulloch Duchess, the kind that make good. Kissinger, my present herd bull that is the sire of all the young cattle, will be at the sale so you may see their sire. Send now for catalog. If you want good reliable cattle this will be your best opportunity. Address mentioning The Iowa Homestead.

Obadiah Prettyman - - - - Fairfax, Missouri

Lefebure's New Belgians.

Henry Lefebure, Fairfax, Iowa, has been closely identified with the improvement of the Belgian horse in America for twenty-eight years. No little amount of the present popularity of the Belgian is due to Mr. Lefebure's exploiting the excellent draft qualities of his favorite breed. He has always handled the Belgian horse almost exclusively and has probably imported and sold as many Belgians as any single importer. At the St. Louis World's Fair his Belgians were the heaviest winners. Mr. Lefebure is situated in such a manner that he has reduced the cost maintaining his business to the minimum as he has four farms all adjoining and raises to a large extent all the feed consumed by his horses. He gives the buyers the benefit of this feeding and can sell good horses as low as anyone. The horses are kept on the farms and the imported mares do all of the farm work besides raising colts each year. Each year Mr. Lefebure's increasing trade makes it necessary for him to import more horses. His fall importation of a hundred head have arrived and now can be seen at his barns. The horses are beginning to recover from the effects of the shipment and are ready to show prospective purchasers. This year Mr. Lefebure purchased twenty Percheron stallions and can supply the wants of anyone wanting really high-class Percherons. His Belgians are the best lot that he has ever imported and are a credit to his ability as a judge. The advertisement on page 34 gives the location of the farms and also states that a handsomely illustrated catalog will be sent free to those applying for same. It would be to the interest of anyone wanting a good Belgian or Percheron stallion to write Mr. Lefebure for particulars kindly mentioning this paper. See puage 34.

L. B. Williams & Sons' Sale.

On November 6th, at Sciola, Iowa, the first town north of Villisca on the Atlantic, Northern & Southern railroad, L. B. Williams & Sons will make their annual sale of fifty head of their large-type Poland Chinas and this firm always sells a good offering and one that the breeder and the farmers always go after. They are selling thirty-five boars in this sale and the remainder will be sows and gilts. There will be twenty-five big lusty spring boars and ten fall boars in this sale and they will be the kind that are bred along the very best large-type lines. They have been using W.'s Quality, a son of Blue Valley Quality, and Orphan Wonder, a son of The Big Orphan at the head of these herds and they have been getting them a splendid line of boars and sows that any of our best breeders can use. They are selling a good tried sow in this sale and she is a daughter of that well-known boar, Big Wonder, that for years did so much at the head of the Hanna herd at Corning, Iowa. In last week's issue of The Homestead we gave a detailed list of the boars and the sows that Mr. Williams and his sons will sell in this sale, and we will not repeat it this week. We will say this about this herd that it is one of the oldest of all the large-type herds in southern Iowa and a lot of the very best have come from this herd in times gone by. They will have some grand, good boars of fall and spring farrow in this sale and there will be enough new breeding for those old customers who have bought before. They are and have been sticklers for the big-type Polands and that is the kind they are selling. If you want their kind make it a point to be at their sale on November 6th. In writing them for a catalog address L. B. Williams & Sons, Villisca, Iowa, but remember the sale will be held at Sciola, Iowa. M. T. White will represent The Homestead at the sale and will care for any bids sent in his care.

HOMESTEAD REACHES FARMERS AND BREEDERS

WM. KEEP, of Atlantic, Iowa, breeds Poland China hogs and advertises them in The Iowa Homestead. Under recent date, he writes with reference to this advertising, saying: "I take the liberty of writing to advise you that my crop of spring boars are great, big, growthy fellows and now ready to ship. I do not think they will last long with the help of the best friend a breeder ever had—The Iowa Homestead. It surely reaches farmers and breeders who want good ones and are willing to pay for them. I have tried several other mediums, but nearly all my inquiries start this way: 'I saw by The Homestead that you have some good boars for sale.'" Readers of The Homestead who are buyers of good stock and those who have animals of that kind for sale will serve their own best interests by obtaining advertising rates. Address inquiries to

THE HOMESTEAD CO. - DES MOINES, IOWA

The Youth's Companion.

There is a never abating interest in the pioneer stories of America. Some of these are purely historical and are reading of a highly interesting order. Some of them, like the serial story now running in Youth's Companion entitled "On the War-path," are of absorbing interest. This story is written by a man who was brought up among the Blackfeet Indians and whose intimate knowledge of their habits enables him to present information that is of value to every American. By the way, this story is only one of the many number of features of the Youth's Companion. Any reader of this paper who sends $2.00, the regular subscription rate, to the Youth's Companion, Boston, Mass., will receive, in addition to the year's subscription for 1914, all the issues of the Companion for the remaining weeks of 1913, including the holiday numbers. They will also receive the Companion practical home calendar for 1914, which is a household convenience. Send requests for sample copies or orders for subscription as above noted, to the Youth's Companion, Boston, Mass. See page 22.

Big Angus Sale at South Omaha.

M. A. Judy, West Lebanon, Ind., who will manage the big sale of Aberdeen Angus cattle at South Omaha, Neb., November 4th, announces that for that event he has secured one of the best collections of cattle that he has ever offered to the public. Sixty head are listed, twenty of them bulls, among them animals that are certainly good enough to go anywhere. Some very attractive bulls are listed by C. D. and E. F. Caldwell, Burlington Junction, Mo. They are cleaning up the old crop to make room for the calves that are coming on, and are listing some things that they consider among the very best that they have ever produced, and they belong to the Trojan Erica, Blackbird and Pride of Aberdeen families, and are sired by Undulata Blackcap Ito and Black Lad, two strong Blackbird sires. James Rhodes, of Bethany, Ill., consigns some extra good young things, sired by an International prize winner. There are several other good consignments in this sale, including one from the herd of S. Melvin, a well-known Illinois breeder, who is contributing the very tops of the females in his herd. This is a sale that deserves a liberal patronage. Manager Judy writes that this lot of cattle is absolutely one of the best that he has ever had anything to do with, and that the buying public will be in no way disappointed with the offering. There never has been a time when it would seem that beef cattle of the great Angus breed should be more in demand than at the present time, as the supply is short. Opportunities to buy good breeding cattle at auction are rare this fall, and when one is advertised in which so many good breeders are listing their cattle as is being done in the Omaha sale, it is to the interest of every person connected with the growing of cattle to give the matter attention. There will

H. D. DE KALB'S GREAT SALE

HAMPSHIRE BOARS

60 ——HEAD—— 60

COUNCIL BLUFFS, IOWA, NOV. 4, 1913

be cattle in this sale to suit all classes of buyers, and the catalog should have wide distribution. It will be sent upon application if you write M. A. Judy, West Lebanon, Ind., as per the advertisement on page. When you write kindly mention The Homestead.

Marion Stone's Aberdeen Angus Cattle Sale.

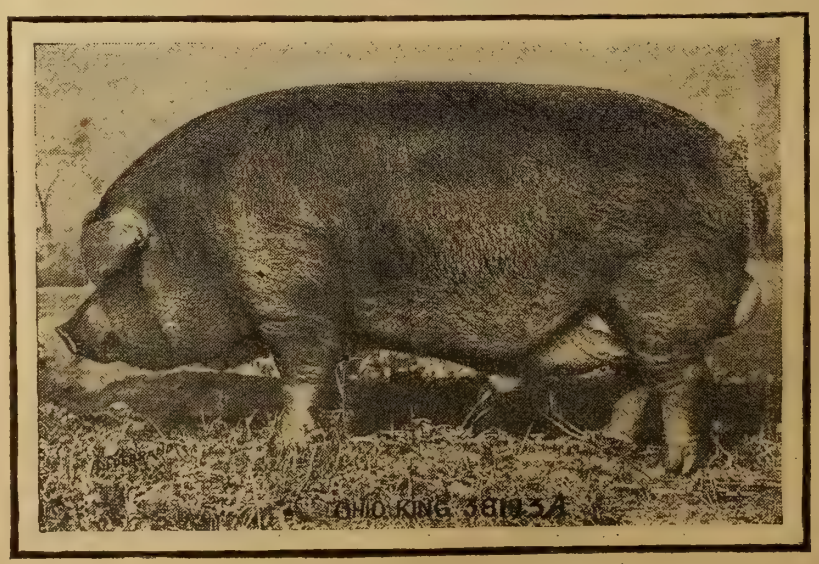
A sale of Aberdeen Angus cattle made up of all good cattle will be held in the live stock sale pavilion at Kansas City, Mo., on Friday, November 14th, by Marion C. Stone, Milan, Mo. Nine yearling bulls that are ready for service, twenty-two cows, mostly with calves at foot and rebred and nineteen two-year-old heifers (bred) are listed. There has not in years been offered to buyers through a Kansas City sale an offering of Aberdeen Angus cattle that would stand comparison with this string of bulls and females. Mr. Stone has not listed an animal for which he feels an apology is necessary. Those looking for bulls for herd headers or for high-class stock bulls should not fail to see those listed. There is a Trojan Erica listed that had he been fitted for the shows would have been a factor in every show where shown. A K. Pride is one that should be appreciated by men looking for top herd-header prospects. The nine head are strong fellows with size, bone and quality and are in excellent condition. All are by Mr. Stone's present herd bull, Kissenger 141961, a K. Pride bull that is one of the good bulls of the breed. His great scale, even balance, depth of carcass, thickness through the heart and two good ends and ability to transmit his good qualities stamp him as one of the good sires of the breed. He will be shown at the sale so all may see the sire of the young cattle and the bull the cows are bred to. The twenty-two cows, nearly all of which have calves at foot and are rebred, are a grand, good lot of regular producing females. The nineteen two-year-old heifers are a superb lot and no one will be disappointed in them, as they are the right kind to place in good herds. There are several K. Prides, daughters and granddaughters of the grand old Imp. Pride of Gartley 2d, the foundation of Mr. Stone's K. Prides. The Trojan Ericas are daughters and granddaughters of Imp. Eppy of Finlarg. Four daughters and several granddaughters of Imp. Joyful Girl of Theakston are listed. She is said to be one of the very best Lady Idas ever imported. A nice string of daughters and granddaughters of Imp. Abbess of Benton 4th and some very choice Easter Tulloch Duchess females are listed. Mr. Stone's cattle are known as the beef producing kind. In 1905 the steer, Big Nigger, produced by Mr. Stone, weighed 2,230 pounds and every year since his cull bulls have been steered and sold at prices that show an average of nearly $10 per hundred. This shows that he is producing beef cattle that make good, and those looking for cattle that produce the market topping kind should not fail to attend Mr. Stone's sale. Kansas City is known as the best place to buy Angus cattle worth the money and in this sale you will have an opportunity to buy good cattle that will breed on. Note page 29 for Mr. Stone's advertisement and send now for his catalog, mentioning this paper.

J. M. Robinson, The Auctioneer.

A young man that has been raised in the stock business and one that feels that he knows the live stock business to an extent that will entitle him to a share of the auction business of the country is J. M. Robinson, North Bend, Neb. Mr. Robinson has been in the auction business for the past five years, and while he has had only a small per cent of the pure-bred sale business of his section of the country, he feels that he is capable of handling more of it and has taken pains to fit himself so that he might render efficient work for those that may employ him. Especially well posted on cattle values and breeding, and equally well fitted to sell swine, he solicits a share of the business. It will probably be of interest to hear from him any way, and we would suggest those interested, or contemplating a change of auctioneers to write him. Kindly mention The Homestead when addressing him. Kindly notice his advertisement which appears on page 32 of this issue.

Williamson's Immune Poland Chinas.

On November 5th, H. O. Williamson will make his annual fall sale of fifty head of Poland China boars and sows at his farm at Herman, Neb., and he has another great offering for the boys. He is going to sell seven of his very best brood sows in this sale with litters at side. One of these is a daughter of the great prize-winning boar, Big Columbus, and he in turn is the sire of the undefeated grand champion boar Columbus. She has a splendid litter at side by Oakland's Equal. Among the other good brood sows that he is selling daughters of Grand Hadley, Ponder Model, A's Victor and Dutch Pan. All of these sows have litters at side and every one of these sows is a good one. Another feature of this sale is that everything has been vaccinated and everything that goes into this sale will be immune, so therefore this sale will be one that both the farmers and the breeders will be anxious to attend. He is offering fourteen head of spring boars and these are good and they are large and have plenty of bone. He also sells twenty fall sows. Write Mr. Williamson at once for copy of his catalog and kindly mention this paper. M. T. White will represent The Homestead at the sale and will look after any bids in his care.



DUROC BOAR AT HEAD OF B. W. LITTLE'S HERD, JANESVILLE, WIS.

Mrs. August Gorder's Sale.

At Plattsmouth, Neb., on Wednesday, November 12th, Mrs. August Gorder will make a public sale of fifty head of big-type Poland China boars and sows, and it is an offering that will compare very favorably with any of the sale offerings that have been sold this fall. This herd was founded by the late August Gorder and his wife and in laying the foundation for this herd they drew from the very best herds in the West. There is no better breeding than will be found behind this offering and the boars and sows that are listed are in nice condition and will be right for the breeders and the farmers who attend this sale. She is selling fifty head—twenty-four boars and twenty-six sows and gilts. First and foremost we want to call attention to the boars at the head of the Gorder herd. Futurity Jack, that sensational winner at the Nebraska State Fair, was bought by Mr. Gorder and you will find eighteen head of spring boars and gilts in this sale that are sired by him and they are among the best that will be sold. Futurity Jack was a son of I Am Big Too and he was the outstanding futurity winner in 1912, and he was afterwards bought by Mr. Gorder at a long price to go to the head of the herd. Another boar used at the head of this herd is Teddy, a son of the Nebraska State Fair grand champion boar, Big Mischief, and he was out of a dam by Big Hadley. This boar is the sire of some of the best things in the sale. The two-year-old boar, Petite Tecumseh, is listed for sale and he is a son of Matchless Expansion, the boar that went to the California Experiment Station Farm. He is a large boar and will beat 700 pounds and is a good breeding hog. There will be two good fall boars in the sale sired by him and these will be out of a dam by old Centennial. Two litter sisters to these boars will also be sold and they are all good. Among the good brood sows listed are daughters of Big Hadley, Big Smoke, Pawnee Nelson, High Pocket and a number by the boar, Teddy. Besides the good spring boars in this sale that are sired by Futurity Jack, there are also a number of very good ones by Petite Tecumseh, the boar we mentioned that would be sold in the sale. Altogether it is a good offering, bred along the very best big-type lines and well grown out. There are a number of boars in the sale that will make splendid herd boars and breeders should go after these, especially those who are wanting something to head their herd. Write Mrs. August Gorder, Plattsmouth, Neb., for catalog and kindly mention The Home

stead. M. T. White will represent this paper at the sale and will care for any bids sent in his care. See page 33.

Prettyman's Big-Type Poland China Sale.

The sale of big-type Poland China hogs which Obadiah Prettyman & Son, Fairfax, Mo., will hold on Monday, November 3d, is one from which buyers can secure breeding stock tracing to boars and sows that have made the big type so popular. Their senior boar, King Longfellow, now five years old is among the very best. He was got by Pawnee Prince, he by Pawnee Lad. His dam, Mary L., was by Big Prospect and better breeding is not found. He is one of the big ones, weighing 800 pounds in breeding condition and is as smooth as could be desired. Their assistant herd boar, Orange Wonder, is a son of Big Orange and Royal Lady, one of the greatest daughters of A Wonder. These two boars are the sires of practically all the offering which is made up of seven fall boars, twenty-three spring boars, three yearling sows, five fall yearling gilts and twelve spring gilts. Those wanting boars, sows or gilts should not overlook this opportunity. The entire offering passed through a siege of cholera during the summer and was also vaccinated with the simultaneous treatment. Note page 29 for Mr. Prettyman's advertisement and when writing him Kindly mention this paper.

F. A. Schofield's Duroc Jerseys.

One of the good herds of Durocs that we have visited recently is that of F. A. Schofield, Columbus, Neb. Mr. Schofield has been breeding good Durocs for a number of years, and his herd today will compare very favorably with that of the best breeders His stock is all of good breeding, and of splendid individuality and the breeding stock has come from the most prominent sources. Mr. Schofield has quite a number of spring boars yet for sale and he is pricing them so that a farmer may buy. They are growthy for their age, and good heavy boned, smooth stock. The greater part of them are sired by Old Modesty by Allen's Wonder Again. A new boar has been added to the herd. He was one of the top boars in the Larson sale of last August and is sired by King the Col. This boar is showing up remarkable size which is one of the pronounced traits of this family. His dam was Crimson Lady by Orion's Success, an Ira Jackson bred boar that sired a lot of wonderfully good sows. Mr. Schofield also has a fall boar, just a little past a year old that is certainly a big one. His sire is Crimson King by B. & L.'s Wonder and he is from Daisy, a mighty good sow by Uneeda Crimson Wonder. Mr. Schofield will make a sow sale in the winter, and further announcements will appear in The Homestead.

Dodds' Poland China Sale.

On Thursday, November 13th, Harry F. Dodds, Florence, Neb., will make a sale of forty-five head of his large-type Poland Chinas and it will not only be one of the very last sales of the fall season, but it will be one of the very good offerings of the year. Mr. Dodds is one of the younger breeders who has made good and he has built up one of the best herds in eastern Nebraska. He is offering a line of breeding in this sale that will appeal to many of the best breeders. He will sell fourteen head of spring boars and these are sired by such well-known boars as I Am Big Too, the boar that stands at the head of his herd and the sire of the noted boar, Futurity Jack, the sensational futurity winner at the Nebraska in 1912. Then there will be three boars in the sale that are sired by the undefeated grand champion boar, Columbus, and there will also be four outstanding gilts in the sale that are also sired by Columbus. The breeder who is going to want something that will help make his herd a reputation should go after these gilts as they are all right. Then there are some good boars in the sale that are sired by B.'s Great Hadley, Fargo, Big Bob, Expander, Guy's Price Last and the first-prize Nebraska State Fair winner, Big Tom. There are a lot of good boars in this bunch and some that will look good at the head of any of our best herds. He is listing his two-year-old boar, Fargo 65952, a son of Big Tom Jr., and out of a daughter of Big Victor. He is a good breeding boar and those who attend the sale can see just how he breeds by inspecting this offering, as some of the good young things in this sale are sired by him. He also sells a good fall yearling in Dodd's Best, a son of I Am Big Too and out of that splendid sow, Victress, by Big Victor. Here is a right good boar, he is large, stands up on good feet and legs, and is a big-boned fellow. He is selling six fall sows in this sale that are as good as anybody has sold this season. Three of these are sired by I Am Big Too and they are out of Victress, the great daughter of Big Victor. The other three are sired by Fargo, the two-year-old boar that we mentioned above that would be sold in this sale, and these are out of the great brood sow, Rose, that will be sold in this sale. No man need hesitate sending bids on these sows as they are good enough to go into any herd. He is also selling his Nebraska State Fair senior yearling sow, Show Girl, and she also won first prize at the Douglass county show later in the season. She is a splendid sow and is one of the best things he is selling. He is also listing Floridora, a daughter of I Am Big Too; Guy's Sunflower, a daughter of Olin's Guy, and Lady Hadley, a daughter of Cavett's Big Hadley. All of these are good brood sows, and have been selected because of their individual merit and their usefulness as breeding sows. He is selling, some splendid gilts in this sale and they are the same breeding as the spring boars. The sale will be made at Florence, Neb., at the feed yards and good street car connections can be made from Omaha. Write for his catalog at once and mention The Homestead. M. T. White will represent this paper at Mr. Dodd's sale and will care for any bids sent in his care. See page 32.

S. A. NELSON & SONS

again direct attention to their annual sale, which will be THE GREATEST WESTERN SALE OF

SHORT-HORNS

of many months. Sale at Farm near

MALCOLM, NEBRASKA,

FRIDAY, NOVEMBER 7, '13

50 head are offered: 8 serviceable, herd-heading bulls, 35 females, some with calves at foot. Some of the most valuable specimens ever passed through a Western Sale Ring are included.

THE BREEDING IS OF THE BEST containing blood of the most noted of the breed.

THE INDIVIDUALITY WILL PLEASE critical stockmen. Winners at recent fairs included.

THOSE OF THE PUREST SCOTCH pedigrees are listed.

EXCELLENT AMERICAN FAMILIES nicely Scotch-topped go in.

Those in Search of Herd Bulls will be interested in the beautiful roan youngster, a son of GOOD LAD'S GOODS and from a daughter of BURWOOD SULTAN, or the September yearling, HILLSDALE GOODS, ALSO BY GOOD LAD'S GOODS and from NONPAREIL FLOWER 2D, or either the red January calf by the same sire and from ORANGE BLOSSOM 2D. These are all of the purest Scotch breeding, two of them as valuable prospects as will be found. Other bulls of extra choice conformation will please the good stockmen.

Those that Appreciate the Ownership of choice Short-horns will be sure to appreciate the cows that will be offered. Massive cows that are suckling nice calves and are rebred, younger ones well up to calving and beautiful yearling heifers of showyard makeup, and everything of good pedigree, more than half pure Scotch, are listed. The older cows are bred to the splendid sire, DAUNTLESS CHIEF, while his heifers and other younger things are bred to GOOD LAD'S CHOICE by GOOD LAD. His dam by VICTOR'S ROAN DUKE.

25 IMMUNE POLAND CHINA BOARS will also be offered. They are the get of Jumbo C. by Wade's Jumbo, Long King's Model by Long King, Chief Price and Adams' Big Hal, Hillcroft Giant and a few others. No bigger breeding anywhere or more popular. You can secure a herd boar here. Some of these boars are bred by Peter Mouw, and all are from good herds. A special train leaves Lincoln at 11:00, making connection with all morning Burlington trains, and will leave Malcolm in time to make connections with evening trains out of Lincoln. Remember that the sale will be held at the farm, one mile northeast of Malcolm, Neb. Free conveyance to and from farm. We ask you to be with us November 7th. Ask for our catalog, look it through carefully and plan to be with us. Mention The Homestead when you write. Col. Z. S. Branson, auctioneer. J. C. Price will represent The Homestead. Address

S. A. NELSON & SONS, MALCOLM, NEB.

Hollingshead's Great Poland China Sale.

On Tuesday, November 11th, at Charlton, Iowa, R. C. Hollingshead, will sell sixty head of the best large-type Poland Chinas that will be sold in southern Iowa this fall and his offering is one that we will stand behind and will say that there will be no disappointments on the part of those who attend his sale. When it comes to size and bone they will all have to take off their hats to this offering, and we will say to those of our friends who are going to want a boar that there will be some in this sale that will surprise you. Mr. Hollingshead is the successor to J. A. Goltry, who for a great many years had the reputation of having one of the very best large-type herds in that part of the state. When Mr. Goltry became county clerk Mr. Hollingshead took over the herd and when you see this offering that he will sell in this sale you will say he is a most worthy successor to Mr. Goltry. He is selling sixteen head of the largest and the best spring boars that will be sold this fall and he is also selling thirteen head of the largest and stretchiest fall boars that we have feasted our eyes on this season. We have seen some good spring boars this fall but we have seen few better than some that he will sell in this sale. He is listing two litters—one by Valley Chief out of Iowa Girl; and another by Big Combination and out of Wide Valley by Valley Chief, that the boys will all have to take off their hats to. The breeder that cannot get a boar that will suit him in this sale will indeed be hard to please, as there are boars in this offering that are good enough to go to the head of any of the best herds in the land. He is selling twenty-one head of fall sows in this sale and you will travel many a day and will visit many herds before you will see so many good sows in one sale offering It will be one of the great offerings of the year and the breeders or the farmers who are wanting something large and good will make no mistake in attending this sale. When writing Mr. Hollingshead address him at Russell, Iowa, but remember his sale will be held at Charlton, Iowa. When writing him for catalog kindly mention this paper. M. T. White will represent The Homestead at the sale and will care for any bids sent in his care. See page 30.

Dunlap's Mule-Foot Hogs.

John H. Dunlap, Williamsport, Ohio, is known throughout the country as the man who has given the mule-foot hog its present good standing. He has made a success and helped his customers to do the same where they need assistance. At many state fairs this season the mule foot was recognized by having a premium list. The New York State Fair was the first of all state fairs to put this breed on an equality with other leading breeds. At this fair Dunlap's herd won all premiums competed for, and all the money this year as well as last. The grand champions of this breed were passed on by A. J. Lovejoy, one of the leading swine judges in America. Mr. Lovejoy told Mr. Dunlap that he could see a great improvement in the breed since the first time he saw his herd and at which time he also gave his herd the grand championship honors. Besides winning fifty-one ribbons at New York State Fair, Mr. Dunlap has won a majority of the ribbons and championships at other fairs where his stock was on exhibition. After trying other breeds, Mr. Dunlap says that he feels that the mule foot is the best general purpose hog in existence, that it is the medium type, between the heavy lard and the bacon hog, and that it is the most hardy, prolific, healthy and quick growing hog he has ever raised. See page 39.

The Nelson Short-horn and Poland China Sale. Last Call.

We are this week making the last call for the sale of Poland Chinas and Short-horns that will be sold by S. A. Nelson & Sons at the farm near Malcolm, Neb., on November 7th. In this sale there will be offered a choice lot of Short-horns, in fact one of the very choice offerings of Nebraska for some time. They are of good blood lines, and as fashions go, they are fashionable. We mean that there are a lot of pure Scotch cattle, and also some that would be called plain bred, but that are in fact the product of a long line of the very best breeding, coming from an ancestry on either side that is first class. There will be herd-heading bulls in this sale. Two of them are pure Scotch, one a red and from a family of red stock, and the other a roan and from a strain that has been strong for the roans. There is also a couple of extra good young bulls of the plainer breeding that are splendid individuals, and those that are not so particular will find in these last mentioned, a bull or two that are of surpassing excellence. The females offered are a very attractive offering, taken as a whole. They combine good individuality with nice pedigree and most of them are strong milkers. Some breeders of Polled Durham cattle will find in this sale some extra thick, low-down stock of good scale that will be nice to add

Scotch breeding to a Polled herd. The Poland China part of the sale will be made up of twenty-five boars, most all of spring farrow, but one aged boar by King Mastodon. He is called A Mastodon and is out of an A Wonder sow. This boar is not a fine looker, but we say without hesitation that he is one of the best breeding boars of the real big type that we have any knowledge of. Some breeder with a first-class herd should look after this boar. There is no question but that he will sell low, and he is really very valuable. There will be a special train from Lincoln to Malcolm and return sale day. It will leave Lincoln at 11:00 a. m. and return in the evening. This will make it easy for all to attend. However, those that cannot get to the sale, may send orders to J. C. Price, representing The Homestead and all such will receive careful attention. Plan to attend. See page 31.

McDermott Short-horn Sale.

J. W. McDermott, Kahoka, Mo., will make a sale of Short-horn cattle at Kahoka on Tuesday, November 25th, selling ten bulls, fifteen young calves and fifteen heifers. Mr. McDermott always sells good cattle and in this sale is listed higher-class herd bull material than he has ever before been able to put out. Among the females are several that would have made a creditable showing had they been fitted. It will be a sale of practically all Scotch cattle carrying much of the blood of Choice Goods through Fair Goods, one of the extra good breeding bulls sired by the old bull. Whitehall Sultan and Avondale blood will furnish some show material in the sale. In future issues more will be said of the offering. If interested in good Short-horns, write Mr. McDermott now for a catalog and kindly mention The Homestead when doing so.

C. W. Phillips' Poland China Sale—Last Call.

This is the last opportunity we will have of calling the attention of our readers to the sale of big-type Poland Chinas to be held by Chas. W. Phillips, New Sharon, Iowa, November 4th. On that day he will sell forty head, thirty-five of which are boars and the balance fall yearling sows. Five of the boars are fall yearlings, four by the noted sire A Wonder and one by Big Orange. This will be a good chance for someone to get an A Wonder boar that is ready for hard service. These A Wonder boars are growthy, heavy-boned fellows and will make large hogs. Part of the spring boars are sired by Long King Superior, one of the best sons of old Long King and we want to say that one of his pigs in this sale is a strictly first-class proposition for a big, smooth herd boar. There will be some good boars by A Wonder Again by A Wonder and a few sired by Mr. Phillips' herd boar P's I. X. L. Write for a catalog mentioning The Homestead. If you cannot attend the sale send a bid to Carlos C. Palmer, Homestead representative, and it will receive careful attention.

The Gierens' Holstein Sale.

On Tuesday, October 11th, T. A. Gierens, Walton, Neb., will sell at his farm one-half mile west of Walton and seven miles east of Lincoln, Neb., sixty head of Holstein cattle. There will be about fifty cows and heifers and ten bulls. They are of the same high-class sort as Mr. Gierens has always sold, and will surely interest those looking for really high-class cattle. The cows and heifers are the big roomy sort, and the bulls are suitable to head herds of good dairy cattle. A couple of these bulls are well enouh bred and of such individuality that they should be sought by those in search of something strictly high class. Free transportation will be furnished those from a distance, from Lincoln to the sale and return, this applies to those that cannot make train connections for the Missouri Pacific which is the railroad at Walton. Col. Z. S. Branson will conduct the sale. He is a man well posted on values and other characteristics of the breed and will be in position to handle to good advantage all mail bids that may be sent him by Homestead readers. Write Mr. Gierens for further information and arrange to attend this sale. When writing, kindly mention The Homestead. See page 19.

Waugh's Boars at Private Sale.

E. V. Waugh, Greeley Center, Neb., has decided not to hold a sale of Poland China boars on November 14th as he had planned doing, but instead will sell them at private treaty, and is starting an advertisement in this issue of The Homestead. Mr. Waugh has a really good herd of Polands, is one of the oldest breeders within the state, and Homestead readers cannot go wrong in buying from him. These boars are mostly by Victor's Wonder, a big hog and one of remarkable smoothness. He is sired by Big Victor and from an excellent sow, Lady Wonder's Best, the top sow of the Lonergan sale two years ago. A few are by Moberly by Big Expansion and still a few others are by Blue Valley and out of the top sow in the Walker sale last winter. Mr. Waugh handles only high-class breeding stock and Homestead readers will do well to address him immediately. Kindly mention The Homestead when writing. See this page.

Francisco's Special Sale of Poland Chinas.

C. W. Francisco, Inland, Neb., is making a special sale for fifteen days on his Poland China boars. These are the pick of his herd of spring raising, as well as three or four fall boars. They are mostly the get of young Combination and they are from a strictly choice lot of big sows. Mr. Francisco is in a section of the country where there is no corn this season, and he says that he will sell these boars cheap enough that those living where there is corn will be able to ship these boars in at a saving. The writer is famliar with this herd, which is one of many away above the average in excellence, and we are also quite sure that those ordering will be pleased with the selections that Mr. Francisco will make as he is a good stockman and thoroughly reliable. We would not take the time to write for description, but would just send him draft for $25.00 and tell him to ship the best boar on the place for the money. You will be pleased. If writing, mention The Homestead.

Boyer & Sons' Chester Whites.

B. M. Boyer & Sons, Farmington, Iowa, breeders of big-type Chester Whites, are offering for sale a fine lot of boars of spring farrow weighing from 175 to 200 pounds each in just nice breeding condition. This firm is selling plenty of boars and states that not a man has visited their farm without purchasing before leaving. This indicates that Mr. Boyer has the goods and when buyers see what he has they invariably purchase. The noted champion, Sweepstakes, a 1,260-pound boar, was shown by this firm and died in the herd. Iowa 1st is now being used in the herd. He was sired by Silver Lad and was first at the Iowa State Fair 1912. New York's Pride, Max and Jumbo Boy are excellent sires that have been used in the herd. The sows in the herd are sired by Jumbo, Challenger, Eclipse, Jr., Newman's Selection, White Goods, Royal Perfection and Silver Lad. This firm can supply your wants in Chester White boars and ship them C. O. D. They will hold a bred-sow sale on February 10th, at which time they will sell a high-class lot of sows. See page 36 and write them your wants and ask them to send you their handsomely illustrated catalog. Mention The Homestead when writing.

Wolf Bros.' Draft Horses.

A Homestead representative visited Wolf Bros., Albion, Neb., a short time ago and we are pleased to say that these gentlemen have at their farms a very fine line of Percheron and Belgian stallions and mares. The greater part of their stock is imported, many of them arriving just about the first of September, yet there are some really choice home bred ones on the farm. One of the best Percheron stallions that we have seen in a long time we found at this place. He was a prize winner at all the leading shows in France the past season, and kept up his good record by winning first in class and junior and reserve championships at the Nebraska State Fair this season, and at that time was just off the boat. These gentlemen also had the second and third-prize two-year-old stallions at Nebraska this season in Percheron classes, and these are also horses of outstanding promise. Good horses have been harder to secure in the old country this season than they have been for some time, and in order to get the shipment of the quality they secured, these gentlemen were obliged to pay some pretty stiff prices, but the good ones are the only sort brought over by these men, and it is a fact worthy of mention that a buyer from Wolf Bros. is a booster for them. At the Nebraska State Fair this season these gentlemen won first, second and third in the two-year-old Percheron class, the first-prize colt being junior and reserve champion as above stated. They also won first on three-year-old mare and the grand champion mare was also imported and sold by them. In the Belgian classes they won second on aged stallion; first, third and fourth on three year old; first, second and fourth on two year old; first on yearling and junior, senior and grand champion stallions. Lovers of good horses should visit Wolf Bros. before making purchases, and whether or not they buy, they are sure to be pleased with the treatment, and to gain by seeing so many good horses. These gentlemen announce that they will make very close prices in order to make room for a January importation and parties that purchase before that time will be able to effect a neat saving. Write these gentlemen without delay and mention The Homestead when doing so. See advertisement on page 34.

Turner's Immune Chester White Boars.

Amos Turner, Wilbur, Neb., is the proprietor of one of the really choice herds of Chester White, or O. I. C. swine in Nebraska, and right now he is offering readers of this paper some rare bargains in immune boars. These boars weigh from 185 to 225 and are being sold at such prices that they afford but small profit over the cost of production. However, Mr. Turner says that he must move them as he has a big lot of other stock that needs the room, hence he will make special prices on this stock for a few weeks. We want you to remember that some of these boars are by White Hope, the first-prize boar at Nebraska State Fair, also at the Kansas City Royal. The fall sows from this herd also won first and

PROTECT YOUR HOGS

HOG-JOY VERMIN KILLER

30 DAYS FREE TRIAL — USES CRUDE OIL

Your hogs can't thrive when they are lousy. A good part of the feed you give them goes to vermin instead of pork, which makes them easy prey to fatal diseases.

The Hog-Joy Machine

is a sure vermin exterminator. It destroys the lice by oiling them. Hogs will keep themselves free from lice without bother to you. Does away with the "Dip." Most perfect Hog-Oiling device on the market. Built entirely of cast iron, can't break. Only three parts, operates automatically; never out of order, winter or summer. Has no small openings to clog up; no small valves to stick. Use crude oil or any patent fluid you like. Machine doesn't waste a drop.

Endorsed By Big Hog-Raisers

H. R. MOSS, Winside, Neb.: "I received the Hog-Joy, and how the hogs did make it hum. Used all the oil up in one day. Am well pleased with it."

Sent ready to set up with two gallons oil; freight paid; 30 days free trial. Price $10. Your money back if not satisfied. Send money-order, check or cash at our risk. Reference any bank in Springfield, Ill.

Agents Wanted: Write for our liberal proposition. A sure money maker with little work. A rare opportunity for you. Descriptive literature, free. Write today and get your hogs in condition to resist disease.

BREEDERS' HIGH-CLASS

ABERDEEN ANGUS

AT AUCTION

UNION STOCK YARDS PAVILION **SOUTH OMAHA, NEBRASKA,**

TUESDAY, NOVEMBER 4, 1913

60 HEAD, consisting of 20 bulls and 40 cows and heifers, all females safely settled in calf or with calves at foot. They are of the most fashionable families, Blackbird, Trojan Erica, Pride of Aberdeen, Queen Mother and other popular families. There has probably been no sale this year that will show more bulls of the high-class, herd-heading kind than this sale. They are bred in the purple and their individuality is such that they will please. Whoever is in the market for a top-notcher Aberdeen Angus bull should attend this sale. This lot of bulls are right from every viewpoint. They are from 12 to 24 months old, have extraordinary scale, with plenty of quality, low-down, blocky chunks, the popular type. Every one will sire the market topper steer. The cows and heifers cataloged for this sale are the very tops of S. Melvin's herd. Every one of them was bred by him. They are splendid individuals and in excellent condition to breed on and make money rapidly. They are sired by the very best bulls the breed has ever produced. They are teeming with the best and highest priced blood that is known to the breed. Everyone who is in the market for good cattle will be pleased with this offering if they will only come out sale day and examine them. Send for a catalog. Mention The Homestead and address

Al E. Smith's Jacks and Jennets.

Al E. Smith, Lawrence, Kan., whose advertisement appears on page 34 is offering the trade eighty, large-boned, mammoth jacks from which to make selection this season. They are from fifteen to sixteen hands standard measure and are fully guaranteed by Mr. Smith, and our readers who have dealt with Mr. Smith in the past know that he has the kind that please and make good and that are guaranteed and all statements made by him can be relied upon to the minutest detail. He has built up the splendid business he enjoys by straightforward business methods, and the fact that the same buyers come back to his barns year after year bears evidence to the fact that he pleases the trade. A number of good young Percheron stallions are also offered for sale. The stock is priced to sell and Mr. Smith invites you to call and inspect his stock. He is conveniently located adjoining Lawrence, just forty miles west of Kansas City, on both the Santa Fe and Union Pacific railroads. Let him know when you will come and he will meet you at any time. See page 34 and in writing for further information kindly mention this paper.

WINTER MANAGEMENT OF FARM HORSES.

To the Editor of The Homestead:

One of the most important points to be considered in the winter management of the farm work horses is to have them in good condition to perform hard work next spring. Of first importance is a light and well-ventilated stable. Many horse stables, especially in parts of the country where the winters are unusually severe, have but few windows. It is impossible to keep a stable sanitary and comfortable without plenty of fresh air and sunshine. Windows should be placed as high from the floor as possible so that when they are opened there will be less draft directly against the horses. In the writer's stable there are several windows, and by opening two or more at various times, according to the wind and sun, the change of air is made without making an undue draft upon the horses.

Cleanliness is an exceedingly important thing in carrying horses through the winter in good condition. The average farm horse is not given the food and attention he deserves during the winter. While it is not always possible to give farm work horses grooming every day when they are idle, yet there is no reasonable excuse for keeping the stables filthy and foul smelling and not providing some means whereby they can obtain plenty of fresh air and out-door exercise. On most farms straw is cheap and plentiful and all that is required to keep the horses clean and comfortable is the desire to do decently the things which our means will allow. If the horses are not used at some kind of work every day they should have a yard to exercise in when the weather is favorable. The horse cannot build up body vigor and strong and supple muscles without fresh air and out-door exercise. The care of work horses in the winter should be with a view to the building up of strong muscles and energy for work, and only such care should be given as will be conducive to that result.

If the horse gets good care and plenty of nourishing food and does not maintain a good flesh condition, something is wrong and in more than two-thirds of the cases it is his teeth. The health and disposition of a horse depends, in a large measure, upon good teeth and an easy, comfortable mouth. A competent veterinarian should be hired to examine the horse's teeth and see that they are kept in good order. The mouth and teeth should be gone over carefully to see if there are any sharp or rough edges on the teeth that will lacerate the cheeks or tongue. By filing down these sharp points and edges he will be comfortable, as it allows the full chewing of his food, improves his health and temper and causes him to behave nicely and work well. One decayed tooth often causes an overgrowth of the corresponding tooth on the opposite set and this overgrowth should be leveled down so as to permit the uppers and lowers to come together and present an even grinding surface. The horse frequently declines in condition because his teeth are so decayed or overgrown that he cannot chew his food. A good veterinarian can fix up a horse's teeth in a short time and at a surprisingly small cost. If once placed in good working order and examined from time to time it is little trouble to keep them so.

The care of the feet during the winter is greatly simplified if the shoes are removed as soon as the farm work is completed in the fall. Of course, it is necessary to keep the horses well-shod when they are working in the winter. However, it is seldom advisable to keep the shoes on horses that are not doing regular work or being driven on slippery roads. The feet are the most important part of a horse and their perfect soundness is essential if the animal is to work in comfort. If the horse is not properly shod he should be kept inside when the roads are slippery. On the other hand, he should not be allowed to stand in the stable with his shoes on so long that the outside walls of the hoof overgrow the shoes. Watch the horse's feet carefully.

Whether brood mare or gelding it is the healthy, well-fed horse that exhibits the greatest endurance in the collar, so the winter management imposes liberal and judicious feeding. The superb vigor so characteristic of high-class farm horses cannot be maintained by feeding half rations. The weak, emaciated horse loses money for his owner by lack of endurance and decreasing vitality. Such weak, run-down horses should not be tolerated, much less courted, even if feed is high. The expense of maintaining farm horses is a large item. It may be as much as $100 a year; it can scarcely be less than $50. When to this is added interest, taxes and depreciation of horses, no arguments should be necessary to convince a farmer that he should get the most work possible out of every farm horse. It costs to feed the idle horses and for this reason it is a fundamental economy to have them in the best of condition to go into the spring's work and perform steady, every-day service.

Good feeding does not consist in stuffing the horse for a number of weeks before he is put to work on heavy grain feeds. Regular and careful feeding on a good allowance of clean, palatable hay and just enough wholesome grain feed to keep him in a thrifty, flesh-gaining condition is all that is required to keep him in good shape for hard work in the spring. Probably the greatest mistake made in feeding horses is that of feeding too much roughage. The horse has a small stomach and is not capable of handling a large amount of coarse feed, like a cow. Where ten or fifteen pounds of roughage are required by the average work horse many farmers feed all they can be induced to eat. Their digestion becomes weakened, their intestines clogged and their general appearance sluggish. On many farms the horse's manger is filled with hay three or four times a day. In many cases sick and out-of-condition horses may be cured by merely cutting down on their roughage ration. In my own practice I feed my horses two feeds of cut hay mixed with grain mornings and noons and at night a liberal feeding of bright, clean hay. I feed about three pounds of cut hay with the grain ration, which is varied to meet the needs of the horses that are being fed. From six to eight pounds should be sufficient for a horse that is not doing hard work. A mixture of corn and oats makes one of the best grain rations available on the average stock farm. If the corn and oats are crushed and mixed with cut hay the danger of impaction is greatly reduced, because the food must be consumed more slowly. If plenty of roughage is thoroughly mixed with the grain the danger of deranging the animal's digestive system is reduced to the lowest possible degree. Alfalfa and clover are excellent feeds to cut and feed with grain and the danger of dust is eliminated if the mixture is sprinkled with water at feeding time. When feeding cut clover and alfalfa with the grain ration it gives a wider variety to feed timothy or mixed hay for the roughage ration at night.

The supply of water must be pure and plentiful. The watering pails or troughs should be clean. When the horse is in good average condition he should have all of the water he will drink. Water him before feeding because it passes through the stomach rapidly. Care must be exercised in watering horses that are being worked, but idle horses are not likely to drink too much water if given to them twice a day. The horse that is being worked requires different treatment and food from the ones that are idle, consequently what I have said regarding the care of idle horses would not apply with equal force to the horses that are being worked regularly during the winter months.

JACKS AND JENNETS

EIGHTY large-boned, black Mammoth Jacks, 15 to 16 hands standard. Guaranteed and priced to sell. The kind all are looking for. Also good, young Percheron Stallions. Reference five banks of Lawrence. Forty miles west of Kansas City on Santa Fe and U. P.

AL. E. SMITH - - - - LAWRENCE, KANSAS

IMPORTED AND HOME-BRED

Percheron, Belgian and Shire

Stallions and Mares

ranging in age from weanling colts to five year olds, for sale at very reasonable prices. A large number to select from.

Frank L. Stream - Creston, Iowa

Purchase Percherons

NOW is the time to buy Percheron mares, with foals at foot, rebred for 1914 foals.

BUY THREE IN ONE

See the mares in pasture or infield work.
See the kind of colts they are suckling.
You can buy more intelligently now, than any other time of the year. For information, and full lists of Percheron Breeders, address Percheron Society of America, **Wayne Dinsmore, Sec'y. Union Stock Yards - - Chicago, Ill.**

TO MAKE YOU THE MOST MONEY

Studs must have the bone and weight, must be bought FROM A FARMER before town barn expenses, profits, etc., are added. My big bunch reg. Percheron studs, weanlings to 4 yrs., are that kind; cracking good ones that will make you the most money. Breeders' prices.

FRED CHANDLER
Route 7, Chariton, Iowa

SHORT-HORN CATTLE.

A Select Herd of Scotch Short-horns
FOR SALE

I AM offering at private treaty my small but very select herd of Scotch Short-horns, comprising 24 head of the most richly bred Scotch cattle here in the west. There are 11 cows, 3 yearling heifers, 9 calves and 1 herd bull. This includes 4 Lavenders, 6 Violet Buds, 1 Princess Royal, 1 Gwendoline, 1 Aurora, and 3 Duchess of Glosters. Among the great cows in my herd is Lavender Bud (cost me $625) and her two choice heifers and she also has cow calf at foot. Honeysuckle 3d by the noted Cumberland Chief and out of Imp Honeysuckle 5th, has a heifer calf at foot and rebred. A choice lot of Violet Buds and Duchess of Glosters. Have sold my farm and must dispose of the select herd. A great bargain for some man wanting to start a herd. Write me at once or come and see me. Address
H. F. FUNKE - - - - - - - - GREENFIELD, IA.

SHORT-HORNS OF PURE SCOTCH BREEDING

THIRTY splendid young bulls, ready for service, toppy, showy fellows, just right for those who want the best. Such good families as Victoria, Orange Blossom, Duchess of Gloster, Missie, Mysie, Golden Drop, Violet Mist and others of note—largely descendants of the old Albert Harrah herd that has been one of the biggest and best in the land. I want you to see these cattle before you buy. Will meet trains if notified. Address, mentioning The Homestead. GEORGE D. HARRAH, NEWTON, IOWA

12—HIGH-CLASS SHORT-HORN BULLS—12

WE are offering for sale 12 choice young bulls, most of which are Scotch, and ready for service. These are mostly sired by our great show and breeding bull **Ruberta's Goods,** and other noted sires. There is some splendid herd bull material among these. Write us or come and see them and mention Iowa Homestead. Address
HOWELL REES & SONS, - - PILGER, NEB.

4--Good Young Scotch Bulls For Sale--4

I AM offering four choice young Scotch bulls for sale sired by the undefeated champion **Ringmaster, Victor Sultan, Diamond Goods** and **Morning Joy.** One of these is a Lavender, an Orange Blossom and a Marr-bred Clara. Write me or come ans see them. Address

Wonderful CURES

Made With 20 Days' Trial Package

Most astonishing results are being obtained everywhere by thousands of Corona Wool Fat users. Farmers, stockmen, horse and mule owners, blacksmiths and liverymen everywhere are helping to spread the news of **wonderful cures.** Every day on every farm where stock is kept there is a great need of this remarkable healing remedy which so easily and quickly penetrates wounded or ulcerated surfaces—even the hardened hoofs of horses—carrying positive and quick relief to the affected parts.

Corona Wool Fat

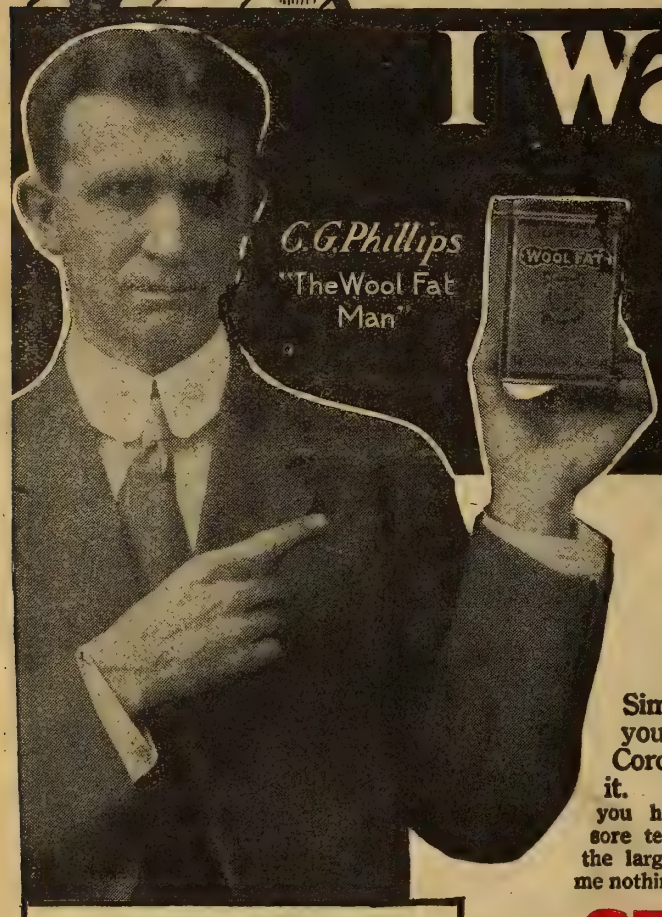
must not be confused with ointments containing grease or oil, or with any other healing agent in the form of a salve. It is not a grease, but the fatty secretions extracted from the wool of the sheep. It causes no pain, burning, or blistering and it

HEALS WITHOUT LEAVING A SCAR

Corona Wool Fat is readily absorbed by the skin and the hoof, and will actually grow a new hoof on animals suffering from quarter cracks, brittle hoofs, etc. The hoof of the horse is from 60 to 70 per cent water and Corona Wool Fat is the only remedy that will penetrate it successfuly.

Corona Wool Fat is fully as good if not better than its guarantee states. For sore cow's teats it has no equal, and for cuts on horses it **heals it up so smooth and nice** leaving no bad scars. All around it is the best remedy for stock that any farmer can use, and once tried will always be kept on hand."

Sincerely,
N. P. NELSON, Prop.
Riverside Ranch,
Sheridan, Mont.



I Want To Send Every Owner of Horses and Cows This Big Can of CORONA WOOL FAT

On 20 Days' FREE TRIAL

Simply mail me the coupon below (or even a postal card with your name and address) and I will send you a big can of Corona Wool Fat together with full directions how to apply it. Use it 20 days after you get it. Try it on any case you happen to have, horse, cow, or mule, old sores, barb wire cuts, sore teats or hoof troubles. Then if satisfied send me only 50 cents for the large can I have sent you. If not satisfied, say so, and you will owe me nothing. I take all the chances.

BARBED WIRE CUTS

GALLED SHOULDER

COLLAR BOIL

SEND NO MONEY

I Even Pay the Postage

You don't even have to risk a penny for postage if you want to try a big can of Corona Wool Fat on the liberal terms of this offer. You take no risk whatever—Simply fill in the coupon and mail it to me. If it is not what I claim you don't have to pay for it. You are the final judge, and your statement will settle the matter. On these terms you cannot afford to wait one moment before accepting my liberal offer. WRITE ME TODAY—C. G. Phillips, "The Wool Fat Man," Mgr.,

COAL Direct From The Mines

Keep Dealer's and Jobber's Profits In YOUR Pocket

DO you know that wherever you live *you* can now buy coal straight from the mines at wholesale prices, the prices your *dealer* has to pay?

Do you know that this winter you can save from $50 to $100 on your coal supply—have it delivered promptly—the cleanest, best heat-producing coal you ever used?

It is literally throwing your money away and adding to the high cost of living *with a vengeance* to continue to pay local prices for coal.

Our great mines near Vincennes, Indiana, produce enormous quantities of the finest coal in the country—the coal that is famous for its remarkable heat unit efficiency. We ship everywhere direct from mines in carload lots this splendid guaranteed fuel.

Tecumseh Coal

Save $50 to $100

on your winter's coal supply. We know that seems too good to be true, but it is an absolute fact that hundreds of people far and near are already buying Tecumseh Coal from us at wholesale and making this marvelous saving.

Not only is Tecumseh the best heat giving coal—but it is *all coal*—cleaned at the mines by the most perfect system ever installed.

No matter how big your coal bills have been in the past—no matter how much you have fattened the jobber's and dealer's profits—the time to turn your back on the old costly round-about way of buying is now. Begin with *this* winter to make this real saving.

It is plain common sense for you to save money by dealing *direct with the mines*. You owe it to yourself to find out the facts and prices—to learn more about Tecumseh Coal. All we ask is the opportunity to quote you prices—to prove in actual figures the splendid saving you can make.

This should interest you whether or not you intend to buy a full car of coal.

Club with Your Neighbors

If you cannot use a whole car—25 to 40 tons—you can easily arrange with your neighbors to divide up the shipment and still make this handsome saving on your winter's coal.

This money-saving plan is too important to be set aside. The amount of waste money you have been paying your dealer belongs in your own pocket. Keep it there. Right now take the first step. It obligates you to nothing. Just fill out and mail us the coupon in this advertisement. The prices we quote will positively surprise you. But do it now before the matter slips your mind. Address

Making Posts and Poles Last Longer

Important Work of the Forest Service in Testing Preservatives of Farm Timber—By D. E. Mowry

THE lifetime of a fence post may be extended from two to four times its natural span by the use of proper preservatives. Experiments performed at the United States Forest Products Laboratory, a branch of the department of agriculture, located at Madison, Wis., have shown that cedar and oak posts will last twice as long if treated and the difference with the softer timber is even very much greater. As the cost of such treatment may be kept within 10 cents per post, the expense will not prove prohibitive, especially when durability is an important consideration.

The amount of wood used on the farms of the country and exposed to rapid decay is enormous. It is estimated that one billion fence posts and rails, the equivalent of six billion board feet, are required each year. For this class of material, durability is the first consideration. The naturally durable woods were formerly plentiful over large areas, but in many sections of the country they have now become too scarce and dear to use. There remains, however, an abundance of inferior woods which, when preserved from decay, make entirely satisfactory substitutes. Many different preservatives have been widely used for ties, poles and piling. The scarcity of durable fence posts is comparatively recent, and, until the forest service took up the question from a scientific as well as a practical standpoint, definite information regarding the preservative treatment of fence posts was lacking.

Users of posts and poles in all parts of the country are alive to the necessity of obtaining increased length of service from them. Except in very warm and moist climates posts and poles which are placed on skids and allowed to become air dry do not decay, because they do not contain sufficient moisture to support the growth of fungi and wood-boring insects, the causes of decay. When posts and poles are set, however, that portion coming in contact with the soil will absorb moisture until conditions favorable to decay are restored. To prevent decay in the timber exposed to the soil or moist air, the wood substance must be rendered incapable of supporting fungous growth. This is accomplished by injecting antiseptics into that portion of the timber exposed to the soil. It has not been found necessary, except in very porous woods, to impregnate the wood throughout. In general the antiseptic should penetrate

HEIGHT TO WHICH FENCE POSTS ARE USUALLY GIVEN TREATMENT.

deep enough to prevent exposure of the untreated wood by abrasion, checking or other action.

There are several methods by which timbers may be given more thorough preservative treatment. The surface may be soaked with paint or some similar treatment. Such a coating keeps the wood dry, and more or less effectually excludes the entrance of the decay-producing organisms. Such coatings should be applied to well-seasoned material, because the coating tends to retard the escape of the moisture that may be within the wood. Better preservatives are the products of the distillation of coal tar and petroleum, which, in addition to possessing the advantage of paint, are antiseptic and poisonous to fungi. The deeper such antiseptics penetrate the wood the more lasting is the effect.

"It is well known," says C. P. Willis, forest assistant, author of a bulletin on the preservative treatment of farm timbers, "that wood decays most rapidly when placed in contact with the surface of the ground, because the wood-destroying organisms find there more uniform conditions of heat and moisture to encourage their development. For this reason the ground line of a post must be thoroughly treated, whereas portions of the post above and below this point require less treatment. The climate of a locality should also be considered."

Good results have been obtained by charring the posts over an open fire. The wood must first be thoroughly seasoned, and care must be taken not to let the wood "check" or split from the heat. Too deep charring, whch will weaken the post, must be avoided. In some cases it is necessary to char the entire post, but the burning should always extend one foot above and one foot below the ground line. It is often a good plan to char the very top of the post.

Treatment with the brush should be resorted to only when more effective methods are impracticable. If brush treatments are to be effective, the posts must be thoroughly seasoned, or the surface coating will afterwards be broken by the opening of seasoning checks, through which moisture will enter the wood. At best it has been found that surface coatings are not very durable. Some of the substances which may be applied with a brush are whitewash, petro-

SCOLDING THE FARMER A POPULAR PASTIME.

One need not go very far to find things to criticise—no farther in some instances indeed than one's own dooryard. We have never yet seen the farm that could not, in some way, be criticised as affecting its management in certain particulars. The sensible man is not always brutally frank in making his observations, at least, he should not be, although there may be times when a little suggestion will be in order and will be taken in the same spirit in which it is given. It is not to scold, but rather in this spirit that one of our subscribers writes when he points out the great loss that is due to the rapid depreciation in farm implements on account of weathering influences. On this subject he writes:

The man who does much traveling through the country and who keeps his eyes open, cannot fail to find many evidences of waste of farm machinery. Undoubtedly farmers as a class have been unjustly accused of being wasteful in many ways, some of the wastes being big and some small, but the one waste which we see on every hand, that of neglected implements, is, in our opinion, very serious. We are firmly of the opinion that the reason why so many young farmers, who have started out with good prospects of financial success in their chosen profession, have not achieved that success at the end of ten or fifteen years, is simply because they have had to put all their profits back into new implements with which to keep going.

The item of farm implements is a source of greater expense than any other to the young farmer just starting out to make his living by tilling the soil. An equipment of necessary farm tools, including buggies, wagons, harness, etc., for an eighty-acre farm will cost between $800 and $1,500. Some of this expense may be met with notes and for two or three years thereafter the young farmer must use a good part of his profits in taking these notes up. In the meantime, his new implements have been deteriorating from legitimate usage, but far more from exposure to the weather when not in use, and so by the time the equipment is fully paid for the term of usefulness of some of the implements is ended and the junk dealer is ready to claim them, while the farmer must obtain new tools to take their places.

The manufacturers of farm implements are growing rich because of this waste on the part of farmers, while many hard-working young farmers are prevented from ever gaining an independence because of this waste always going on all around them. Those farmers who will make an effort to prevent this waste and thus keep their money for themselves on the farm, where many improvements and conveniences are badly needed, no doubt, are the men who will earn reputations of being good managers, while the places where there is a display of farm implements scattered about the premises will present good evidence of bad management on the part of their owners.

Sometimes this bad management takes the form of neglecting to put the implements under shelter though ample shelter may be available for every tool on the farm. More often, however, there is not ample shelter available. What should a good manager do in this case? Why, build tool sheds if he is the owner of the farm, or compel his landlord to build them if he is a renter by firmly refusing to occupy a farm where there is not a reasonable amount of storage room for tools. The cost of a serviceable tool shed need not exceed that of a grain harvester, and the investment will double the life history of every piece of machinery covered by the same. Consequently, a good tool house will more than pay for itself in a very few years. Some of the manufacturers of farm implements have been frank enough to admit the truth of this assertion, and many good farmers have demonstrated it to their complete satisfaction.

It is quite true that the too-rapid wearing out of farm implements has kept the nose of many a man on the grindstone, as it were. In some cases binders have been worn out in four or five years, or rather, weathered out, and we have seen instances where wagons were not fit to carry heavy loads after a period of ten years' service. Of course, it is a one-sided argument to point out the necessity of sheltering a thousand or fifteen hundred dollars' worth of implements because no man will be found who would object to an outlay of a few hundred dollars in an implement shed if such an outlay would double or triple the life of the implements. If our own observations are correct this waste is rapidly being headed off as compared with former years, but nevertheless, we claim that the suggestion which comes from this subscriber is timely and we pass it on without any intention of rebuking those who have been a little too careless in the past.

RATIONAL FERTILIZING OF LAND

A Kansas subscriber, who is apparently a close observer of conditions, calls attention to the fact that fertilized lands suffered more from drouth conditions in 1913 than land which received no natural or artificial fertility. Among other things he says:

One season is seldom like another, consequently the method of farming that proves better one year may not be the thing the next year. The season of 1913 proved exceptional in the extreme, and while it will not do to govern next year's work by what proved best this year, we have before us the behavior of certain methods of farming under dry weather conditions. It may be said that the behavior is so much different from the ordinary that results are striking.

In this connection, I wish to call attention of readers to the behavior of fertilized fields. It has made no difference whether the fertilizer used was common old reliable barnyard manure or fertilizer of the commercial sort, the result was much the same—an effect on crops decidedly detrimental. In the ordinary season these fertilized fields would have yielded most, but this year the yield was least, thus we see that a method of farming that proves best in a season of normal rainfall is more than likely to prove the opposite when rainfall is extremely shy, as it was this season.

On the theory that the past two or three seasons were rather on the dry order, and that the time had come for a change, we know of one farmer in eastern Kansas who invested heavily in commercial fertilizer to use on his corn land. He figured that there would be plenty of rain, so his fertilizer would raise him a big crop. As the opposite proved to be the case, his fertilizer worked the wrong way. While his corn crop started off in fine shape, it was first to show drouth effect and was first to be entirely beyond redemption. The burning effect was so much greater where fertilizer was used that even his fodder crop was much more inferior in quality than it would have been without the fertilizer.

So we say, what works best one season does not always work best the next. Just because fertilizer proved harmful this year is no reason why it will prove harmful next year; in fact we know that the rainfall will govern this, and as seasons so disastrous as 1913 do not come oftener than once or twice in a lifetime, we may go ahead with the use of fertilizer next season with little fear that it will work out as it did this season. Likewise, those who applied the most manure to their land last season have less to show for it than as if they had left the manure in the yards. No one, however, thinks of quitting manure hauling because of the ill effect of manure on the land, due to the almost unprecedented drouth, so no one should think of discontinuing the use of fertilizer of any kind. It is time now to forget the unusual season of 1913 and to go ahead with the methods of farming best suited to the ordinary season. Those who farm to suit another dry season will, no doubt, miss it just as badly as wet season methods of farming missed it this year.

The one conclusion that may be drawn from the season of 1913 with reference to the effect of drouth on production is simply this: That more and more emphasis must be placed, in the future, upon the importance of maintaining a good supply of humus in the soil. This must be kept in mind in applying fertility and that is why, in the main, fertilizer should be applied to pastures and to meadows. The effect of these is to stimulate root growth, and, in turn, when the roots decay humus or vegetable matter is added to the soil. With a plentiful supply of this organic matter crops are able to resist the effect of drouth to a much greater degree than where artificial fertility is applied directly to the cereal or grain crops. It must always be kept in mind that the water-retaining power of the soil is in direct ratio to its humus or organic content. By fertilizing grass lands we prepare the soil in an ideal way for the growth of crops that follow and particularly do we fortify ourselves against the disastrous effect of drouth conditions.

FARM ROADS OR SPEEDWAYS.

Secretary Houston, of the department of agriculture, gave his hearers at the recent good roads convention in Detroit a sensible talk on road building in general and government aid in particular. He declared that the government, so far as he is its mouthpiece and connected with its operations, is more interested in improving the truly rural roads of the country (those over which farm produce is hauled to market) than it is in improving the transcontinental highways which are mainly used by automobile touris s. He also asserted that if government aid is forthcoming it will be on the basis of state apportionment, rather than congressional district or county or road district. Secretary Houston's speech is such a clear exposition of the intentions of the present administration that we take a considerable extract from it:

The essential thing to be done is the providing of good roads which shall get products from the community farms to the nearest station and make rural life more profitable, comfortable and pleasurable.

There are complex problems to be solved in many states before the most efficient expenditure of money by states and communities for roads can be secured, and there are many more to be worked out before one can rationally expect the federal government largely to participate.

That the suggestion of federal aid to road building raises grave questions and involves possible dangers, no thoughtful citizen doubts. There are proposals before the public mind which would bankrupt the federal treasury and suggest possible abuses before which those of the worst pork-barrel bills of the past would pale into insignificance.

It would be especially pernicious if such aid should result in stifling the spirit of local self help.

The first practical essentials in the planning of road legislation would seem to be to recognize the states as the smallest unit with which the federal government might deal. This would give relief in a measure from the insistent demand that would come from every township and every district in the Union for its share of state or federal assistance, without reference to the merits of the case or the practicability of the undertaking.

In the case of roads on which federal money is to be expended it would seem essential and wise that the federal agency should have the requisite power of the approval of the selection, supervision of the construction and maintenance, and the right of inspection.

It is reasonably clear that for every reason there must be some automatic check upon the demands to be made upon congress and that this should be afforded through the requirement that the states and the localities should contribute an amount both for construction and maintenance at least equal to and possibly double that contributed by the federal government; and that, in the apportionment of any possible federal funds a number of basic factors such as population, area, wealth, or minimum cost of construction, should control, I have not the least doubt.

In short, as a practical program, I believe that this matter is one in which haste can best be slowly made.

Much has been heard on the subject of government aid in road building in recent years. Secretary Houston fears that considerable of the agitation comes from the promoters of automobile highways, rather than from those who sincerely want to improve actual, farm-used country roads, over which farm produce is hauled to market. It may be argued that the farmer is buying automobiles in large numbers, that he is a better motor-car customer, in fact, than the city man; and, therefore, the real country road must cater to automobile traffic as well as to farm wagon traffic. What the country is most interested in just at present, however, in the fight to reduce the high cost of living, is to cut down every factor that stands between the price which the consumer pays and the price which the producer receives. Secretary Houston is right so far as what he says applies to the importance of the real country road over the speedway of the tourist.

REVIVING OLD-FASHIONED SYSTEMS OF STOCK RAISING.

Men in middle life can recall the time when every corn-belt farmer was more or less extensively engaged in raising livestock. On every farm could be found a few good mares, some old sows and a number of big, square, useful dual-purpose cows. Here and there in every neighborhood can be found men who are still working along this line, but in the main the development of the range country has greatly altered the livestock situation, but the time has arrived when we must go back to first principles. A Missouri subscriber outlines the plan that he believes should be carried out in the future just as it was formerly carried out in the past. Among other things he says:

Back to the growing of young stock the farmers should go. There is a scarcity of hogs and cattle. The market keeps high and everywhere there is a complaint of the high cost of meat products. Horses and mules, too, are in demand for labor on farms. The man who must have a good team cannot get it for less than $400 or $500. Just the other day a neighbor of mine refused $650 for a pair of draft mares. He needed them and did not wish to sell, and they were first-class animals. The reason for this increase in prices is simply because farmers have turned their mind from stock growing to other things. They have been deceived with the idea that they could buy cattle, hogs and horses as cheap as they could grow them.

There was a time on my father's place when we grew our cattle and hogs for feeding. There were several brood mares from which we raised our horses and mules. We kept from twenty to twenty-five cows on the place the year around, and seldom had less than twenty calves and twenty yearlings coming on to the feeding age. The cows devoured all the straw and hay and fodder we grew on the place and turned it back to the farm in the shape of manure. By the addition of a little corn they got through to grass in fine shape, giving birth to healthy calves in the spring. We were never without five or six brood sows of the best breed we could get. From four to six mares were wintered, and we had young horses coming on each year. The sale of young horses and mules was quite a source of profit each year. At time for feeding cattle in the fall our bunch of two-year-old steers was brought from the pasture and put into the feeding pen. Sometimes a steer was purchased from a neighbor to fill out the bunch. The hogs to run after them were also brought from our own herd. At the selling time it seemed that it was all profit, and most of it was made right on our own place.

But times changed. Farmers took the idea they could buy western cattle cheaper than they could grow native stuff. Hogs were so cheap it didn't pay to raise them was the conclusion reached. No use to keep a lot of old mares around eating their heads off. As a consequence all of our cows were sold except one or two of the best milkers. The brood sows went into the fattening pen and the old mares were sold for a song. To Kansas City we went for cattle, and hogs were picked up wherever we could get them. Much of the roughness about the place went to waste. Straw ricks rotted down and stalks were plowed under in the spring. When cattle and hogs were sold most of the money went to the bank to pay off the loan for the Kansas City stuff, and I remember one year we lacked a couple of hundred dollars of having enough to pay off the bank loan. Cattle dropped in price and we lost money. While the cattle and hogs made us money as a general thing, yet it was not so profitable as when the stuff was grown right on the home place. Then the work teams grew old and died and young horses had to be purchased.

The thought that I wish to enforce is that the farmer should go back to producing hogs and cattle right on his own place. He should have young horses and mules kicking up their heels in his own fields. I am sure it will pay, and there will not be a shortage in stock on the farm.

One thing is certain, namely, that there is no new range country to develop so that men who take up the business of raising livestock need have no fear of the foundation dropping from under the industry. The condition of the meat supply the world over is such that even the removal of the tariff no longer fills the stockman's heart with fear. Viewing the matter on all sides it is doubtful if there ever has been a time in the history of this country when prospects were better from the standpoint of the man who raises good livestock than they are at the present time. This is sizing the matter up without having this year's markets or next year's probable values in mind, but rather looking ahead for at least a five and possibly a ten-year period. It is doubtful if there will ever be an oversupply of meat during the present generation; that is, a supply that will actually bring values down below the cost of production. We like the kind of prosperity that is always associated with the sensible handling of livestock and for that reason we endorse the recommendations made by this subscriber.

James M. Pierce

THE PUBLISHER'S VIEWS —ON— TOPICS of THE TIME

THE LESSON IN MEXICO.

NOTHING could more effectively prove the advantage of living in a country where there is freedom of speech and of action than the election fiasco in Mexico last week. Out of 3,000,000 men qualified to vote, less than 100,000 (only one in thirty) exercised the prerogative. Why? Because they were literally afraid to go to the polls and vote contrary to the dictator who snatched the reins of state, after the murder of the duly elected president and vice president, for whose safety he had given repeated assurances. It is a sorry state of affairs when people live in a so-called republic and then are not permitted to exercise the greatest of all prerogatives: the right to rule themselves.

Sometimes it may appear to the average farmer as though the right to vote were not such a great boon, after all. So many corrupt men are kept in office by the vote of the rough and vicious element of the cities. Sometimes it is discouraging to quit the work of the farm and fields to devote a half day to driving to and from the polls, and then see the town vote more than offset the farm vote and some scalawag be elected to office. But is it not far better to go on, year after year, voting for the best man, even when it is a foregone conclusion that he cannot be elected, rather than to lapse into the chaos in which they are now in Mexico and be afraid of your life if you do not vote right?

I have come to the conclusion that the real cause of the trouble in Mexico is the low condition of the farming class. Immense plantations, of hundreds of thousands of acres, are owned by absentee landlords, who seldom, if ever, see their property, know nothing of the crops except that they produce the money which they dissipate, and have no real, direct interest in the welfare of the country or the people. The actual farming work is done by peons, who are little more than slaves. They know little or nothing, are afraid to speak out when they do know something and are kept in a sorry state of subjection.

It is the lesson of history that no nation can continue or be steadfast which is not founded on a sound and stable common people. The high standard of the common man (whether he be farmer or city dweller) is the great glory of our country. If Mexico is ever to rank alongside the United States it must elevate its plain people and make them unafraid to exercise a man's prerogative, without fear or favor. When Mexico is farmed by men such as those who are making the crop wealth of the grain belt roll high into the billions year after year, it will no longer be a country where anarchy reigns, where men are afraid to speak their minds and where no man knows what day he may feel the mailed hand of tyrannical power closing over his throat.

GOOD ROADS AND PUBLIC HEALTH.

WE HAVE heard a great deal about the financial and the economic value of good roads, and there is no denying the soundness of the arguments along these lines. I personally know scores of instances where the value of farm land has been increased $10, $25 and even $35 an acre simply by building good roads, which bring the farms within easy reach of the nearby town or city. I likewise know many cases where the vexatious problems of keeping the boys and girls on the farm, and of securing help when needed, have been solved by building good roads, which make it possible for the young folks to get back and forth between farm and town in short order, enjoy an automobile ride or a spin behind a fast horse, and which remove the objection of loneliness too often urged by the hired man.

But it was only this week that the value of good roads from an altogether different angle was presented to me. I do not see why it is that we do not hear more about good roads as conservers and preservers of bodily health. Can't you readily see the connection between the two? Bad roads mean stagnant pools, breeding mosquitoes to carry disease germs around the country; they mean weeds and trash in which fever-laden flies germinate; they mean lack of sanitary drainage; they mean generally low-down, slipshod conditions of the entire neighborhood. Isn't all this so? Can't we, quite logically, assign three reasons for good roads, from the viewpoint of public health?

First: The removal of weeds and trash.

Second: Providing drainage for stagnant water.

Third: By example, compelling farmers to clean up their barn yards and premises.

I am very much pleased to see that the board of health of one of our grain-belt states has taken up the campaign along this line. I am going to give their argument, at length, because of its soundness:

> Weeds and trash prevent the prompt evaporation of moisture and promote retention of the ground water. This makes ideal breeding spots for mosquitoes, flies and other insects which are known as disease carriers, not to mention chinch bugs, hoppers and other insects which are crop damagers.
>
> Many farms have no means of drainage except by ditches along roadways. Open ditches, clear of brush and debris, with hardened surface and proper fall, afford these farms the opportunity of ridding themselves of many a stagnant pool. Road oiling in itself is destructive of insect larvae, especially mosquitoes—a well-known fact.
>
> Dry roads offer pedestrians, and notably children who are compelled to walk to and from school, dry shoes and feet. It is a well-known fact that cold, wet feet and chilled limbs lead to infections of the respiratory passages, including pneumonia and tuberculosis.
>
> Good roads promote travel of those highways and in themselves they set example to the farmer whose premises are bordered by them. The comparison of a well-graded, clean highway with an unkempt and trashy barnyard adjoining is sufficient to stimulate every land owner to a clean-up. Pride compels him to offer to passers-by a neat appearing and attractive house and barnyard. The results are only too obvious. Good roads are active disease prevention agencies aside from their financial and commercial value.

I have long been convinced that good roads mean good farms, good farm homes, good rural schoolhouses, a generally higher plane of country life. Let's add good bodily health to the assets. There is nothing more important than the health of loved ones and those dependent upon us. If good roads will minimize such scourges as typhoid, diphtheria, dysentery, pneumonia and malaria, should we not join in the campaign to secure them with a wholehearted enthusiasm which will stop at nothing?

A GIFTED WOMAN, MUZZLED.

I SPENT a couple of hours yesterday talking with one of the best educated and most charming women it has ever been my pleasure to meet. She is a farm woman, living on 160 acres of splendid grain-belt land, which she and her husband have completely paid for by hard but loving labor. She has reared a family of five children, three sons and two daughters. Three of them have already been sent away to school, two to the state agricultural college and one to a technical training school back east which is noted for its thoroughness. The money which educated the oldest child was earned by the devoted mother, with her flock of hens, at a time when every cent which the father could rake and scrape together was needed to pay off the last indebtedness on the home place. This farm mother was one of the leaders in the movement to start a neighborhood club, consisting of twelve farm families, who meet once a month, in rotation, in the various farm homes. A picnic dinner is served, in summer, on the lawn; in winter there is a "homey" spread in the dining room, the tables literally groaning with good things to eat. After the inner man and woman have been regaled, and the children have started playing games, men and women join in a literary and musical program in the sitting room. They discuss current events, politics, men and measures all over the world. The subjects range from the crisis in Mexico to the county farm adviser; from the income tax to the latest novel or musical composition or picture. This woman with whom I was talking yesterday can tell you the names of every member of President Wilson's cabinet; she knows what the Department of Agriculture, under the efficient direction of Secretary Houston, is attempting in the way of improving farm conditions; she reads a daily newspaper, a half dozen magazines and the best current books. She is refined, educated, cultured, a woman qualified to serve a whole state or nation, yet content with her routine home duties.

This woman is permitted no voice whatever in the government of the county, state or nation. She must remain absolutely silent, while some ignorant, low-down, riff-raff negro, kicked off the deck of a down-river steamboat and lolling in the sun without thought of country or anything but the next meal, is allowed a voice and vote. It is a flagrant injustice which should not be permitted any longer than laws can be enacted to stop it.

The middle West is full of such brainy farm women as the one I have in mind. The hair of many is silvered now; they came to the West when they were young. They have played a part in the upbuilding of the great agricultural empire of the Mississippi valley. They helped their husbands build the cabins where their honeymoon was spent, where the first child was born; they aided in the laborious work of grubbing a foothold in the virgin sod and bringing the quarter section to its present high state of cultivation. They bore sons and daughters who are now making the laws and doing the big, really-worth-while things of life. All honor to the pioneer women of the West whose story is the story of the founding and upbuilding of an empire. And yet no matter how gifted, how devoted, how noble are these women, in only two states out of the twelve of the grain belt (Illinois and Kansas) have they the right to vote, and in one of these to a limited extent only.

I cannot understand the opposition to woman suffrage in the grain belt. I can understand it in the South and the East; the political bosses know full well that they are kept in power by the ignorant, purchasable vote of the negro and the fanatical, foreign anarchist. But here in the grain belt, why is it that the vote for women has so long been withheld? It must be only because the men have given the subject all too little attention; they have let a shallow prejudice warp their better judgment, their common sense; they have waited for the big centers, back east, to take the lead, forgetting that it has almost invariably been the grain belt—the agricultural section of the grain belt—which has blazed the way in every political and economic reform.

I earnestly hope the day is not far distant when this unjust discrimination will come to an end, when my wife and my daughter can accompany my sons and me to the polls and express their choice for every office, from township clerk to president of the United States. I believe that day is coming. Will not every one of my readers join in bringing it to pass, without delay?

James M. Pierce

EFFECT OF LIME ON SOILS.

Lime is not a fertilizer in the correct sense of the word. The addition of fertility to a soil means that there is added to it one or more of the three elements, namely, nitrogen, phosphoric acid and potash. While lime is used by plants the amount that is utilized in that way is so small as to be negligible and we must therefore look to another effect if we are to ascertain why it is that so many soils are benefited by an application of lime.

One effect of lime on a soil is to liberate the real elements of fertility, particularly phosphoric acid, from the inert materials in the soil. Under certain soil conditions phosphorus is not easily available to plants, but the application of lime results in new compounds of plant food whereby the phosphorus becomes more accessible. In this way the addition of lime to a soil really results in feeding plants more liberally with phosphoric acid. The same also applies to potash, an element which is frequently locked up in unavailable forms. When lime comes in contact with these inert potash compounds a very striking chemical change takes place resulting in the potash being liberated or rendered available. In other words, the lime takes the place of the potash in the compound, thus leaving it in condition to be used by plants. In some respects lime may therefore be called a soil stimulant because while it increases productiveness this increase is due to the more rapid liberation of real plant food elements.

Lime, in addition, corrects soil acidity and its application is always desirable where soil shows any degree of sourness. Legumes do not flourish on acid soils and no agency has yet been discovered that will so quickly and completely neutralize acidity as will lime.

ADVERTISING FARM PRODUCTS.

A New England farmer visiting the grain belt recently was impressed by the fact that while farming is at a high level in the West, the average farmer is overlooking a golden opportunity by not using more printer's ink. He does not necessarily mean the use of ink in advertising special auction sales of stock, but in persistent, week-after-week advertisements of current produce in the weekly or daily newspapers of the section. His views are of such interest, we print them in full:

> Up my way there are any number of farmers who run advertisements regularly in both the weekly and daily papers.
>
> These are not advertisements for the sale of a certain lot of stock or grain, but regularly inserted advertisements calling attention to their farms and the character of their production. Frequently the advertisements include pictures of the barns and dwellings and pasture scenes.
>
> The producers have found that it pays. In all the towns are eager buyers for all sorts of stock and farm products and they read these advertisements of the farmers. By them they learn Joseph Brown has a hundred head of fat hogs, and makes a specialty of raising that class of stock. Also that he has a fine large poultry yard, and always has on hand a good supply of fowls. Another man has made a specialty of certain grain or vegetables, and he tells about it in his advertisements.
>
> Of course this farm advertising yields good results only where the roads are good. Most New England highways are first-class. Buyers won't go out from the cities when the roads are bad unless they are awfully hard up for stuff. But they will go in swarms when they can get about easily, and then is when the live farmer finds it pays to advertise.
>
> If farmers would advertise out here they could get the same results, but they have to look well after their roads first. The farm advertiser not only

gets business from the towns, but from his neighbors as well. They see he had a big stock of something they may be short on and they hunt him up and make a deal.

The day of the business farmer is close at hand. Good farmers have private offices in their homes or farms, equipped with roll top desks, typewriters and printed stationery. Many of them have given their estate some attractive name, which looks well on a letter head and helps to get business. Then the modern man keeps a complete set of books, setting down his income and expenditures, and when the end of the year comes he will know to the cent what each crop has netted him, and which crops have been a loss.

Since the installation of parcel post, the experiment of advertising butter, eggs and fresh produce in the weekly or daily newspaper of the near-by town, has been tried by many farmers, with varying results. Some of the larger daily papers have established regular parcel post advertisement departments, similar to those which the English papers have found so popular for a number of years past. As a general rule, it is safe to say that when the advertisements are attractively written and offer bargains, which may be secured easily by the city consumer for less money than he is obliged to pay at the town stores, they are productive of good results. Advertising certainly pays, when properly planned and executed. If the farmers of New England find it profitable to tempt the city buyer by advertising their fresh produce, it would seem as if there were no reason why the grain-belt farmer should not do likewise. Provided, of course, that a ready and steady market is closely available and that the roads are such that the buyer can easily visit the farm or the farmer easily get his stuff to market while it is fresh and attractive. The experiment would seem to be worth trying.

THE COMING INTERNATIONAL LIVE STOCK EXPOSITION.

In less than a month the great International Live Stock Exposition will be under way in Chicago, the date this year being November 29th to December 6th. We are informed by the general manager, Mr. B. H. Heide, that this year's exposition will in many respects excel former records. Improvements have been made that will add greatly to the comfort of exhibitors and the same care will be taken as heretofore in making the exposition pleasurable to the visitor.

It can be said without fear of contradiction that there is no such exposition as this held at any other point in the world. If it is true that in the breeding classes it is equaled by some of the English or Scottish shows, it is equally true that taking into consideration the car-load fat-stock entries the record of this annual show has never been duplicated anywhere. It is impossible to place anything like an accurate estimate on what has been accomplished by this institution in the interests of better beef cattle and in behalf of the draft horse. It is indeed a clearing house of these great interests and progressive stockmen throughout the length and breadth of the land are more and more participating in the benefits that are to be obtained from attending this great show.

The International Live Stock Exposition has been successful in every sense of the word, particularly so in its educational endeavors. It has maintained the highest possible standards in all the work of judging and as a result premiums won at this show carry with them greater honor than those conferred by any other institution of like character.

This paper has been going to large expense every year since the International was established to report every department in detail and this plan will be pursued this year as well. We consider the exposition the most important agricultural event of the whole year as affecting the livestock industry and holding this belief it is but natural that we should desire to have a very large number of our readers enjoy the benefits of this great exposition.

FEEDING CATTLE—BY THOSE WHO KNOW HOW.

Extensive feeding operations will be carried on this season in the territory covered by the Iowa Homestead. This is indicated by the number of stock cattle that have been brought in from the great Southwest and West. Feed is high in price and if there is one plan that is more economical in feeding operations than another knowledge of that plan should be widely disseminated.

This subject is so important that we believe that it will be exceedingly profitable to all concerned if there is a somewhat extensive exchange of views in these columns pertaining to feeding methods. To this end we propose to inaugurate a contest and will ask our "feeder" readers to submit their methods of feeding, going somewhat into detail as to the kind of feed used, the kind of cattle fed and the resultant gains. To the one who sends the most practical and up-to-date article on feeding methods employed by the writer himself, we will pay $5 in cash. To the writer of the second best article a $3 cash prize will be given and all those who submit articles on this topic will be appropriately rewarded for their effort.

We take it for granted that in some cases good results will be reported in regard to the feeding of ensilage, while in other instances men who have not had experience in feeding ensilage will desire to give the results of their feeding operations. We shall be pleased, indeed, to hear both sides of the question discussed in a lively manner.

SICK AND TIRED OF FARM WORK

It is not surprising that farm boys and young men are not always enthusiastic over the kind of work they are called upon to perform. In this respect they are not unlike the lads who are reared in towns and cities. In either case the tasks of the other fellow always appear a little more interesting than the ones we are engaged in ourselves. This is noted particularly by the farmer boys during seasons of bad weather. As corn-husking time comes around it often happens that we have a week or ten days of most disagreeable weather and yet through a considerable part of it the work of husking, as well as the labor of choring, must be carried on under practically a full head of steam. This is the condition that palls on the farm boy and it is not unusual to find instances where there is a very strong desire and a desire often put into action to quit the whole thing there and then, turn his back on farm work forever and seek what looks to be the lighter forms of labor found in the towns and cities.

We recently met an eighteen-year-old lad who, while in this frame of mind, made a journey of practically 300 miles. He had a few dollars left at the end of his trip, and realizing the necessity of beginning to earn at once, found employment in a railroad grading camp. The wages to him seemed relatively high, and his work as a teamster on the scraper at first seemed agreeable because others did the work of loading and unloading the scraper. He had spent one week at this new form of labor, and at the end of this time was one of the most humble individuals that you can imagine. He had thrown up his job to return to his "folks" deeply impressed by the lesson that there was no place in all the world like the old farm home. When asked about the kind of treatment he received and how he enjoyed it, he said:

The foreman of our camp seemed to be a man who could not be satisfied no matter how carefully one tried to perform his work. In the main he had to deal with a class of foreigners that seemed to me to be exceedingly stupid, but I prided myself that I was an exception as I had been handling horses all my life. If I had any superior skill the foreman was unable to detect it because abuse accompanied every order that I received. The food we were furnished was fairly good, but it was eaten from the bare boards and, believe me, I was not reared in that kind of an atmosphere. We bunked in box cars and were literally packed in like sardines. There was so little ventilation that the atmosphere was vile and as bathing facilities were never good you may take it from me that one who had been reared in a comfortable farm home found it unbearable. The men in the main were spendthrifts and to my knowledge not one single man in the camp was saving a dollar. As soon as they received their pay each week it was very quickly spent in drink and in other ways equally as harmful, so that work was begun by every man on Monday morning without a cent in his pocket. All my life even as a boy I had spending money and I was taught to use it wisely and not to squander it as soon as I came into possession of it. These fellow-workmen had not been so taught and the spendthrift habit seemed to be absolutely fixed. I have just enough money to take me back home and I have had sufficient experience in this outing to demonstrate to me that when I get back into our old neighborhood there will be no locomotive strong enough to haul me out of there on any such errand as I have run in this case.

We know farm boys well enough to understand that this very thing is going on all the time, that there is not a week but that in every neighborhood boys and young men have become soured on farm life. They believe that they are obliged to work hard, that there is too much of a sameness about their labors and the cure-all to them is to be found in cutting loose from the farm and taking up new forms of labor among strangers. We would that it were possible for us to point out all the disappointments that are in store for lads whose heads get swelled up in this way. The experience of the individual given above may cause some of those who read these lines to give the matter a second thought before the die is cast. Sometimes these escapades are not so easily terminated as was the case in the instance given and not infrequently blunders are made at such a time, the effect of which can never be overcome.

THE IMPORTANCE OF WINTER VENTILATION.

While ventilation of the stock and poultry buildings is essential in summer it is doubly so during the winter months, as the period of confinement is much longer in that season, the crowded conditions and deposit of manures also adding to the unsanitary and unhealthy surroundings.

There are two classes of farmers who err in this respect. One thinks he cannot make the stalls and roosting places too snug for the inmates, which causes them to breathe and rebreathe the vitiated, poisonous air till their entire systems are weakened and diseased. The other class admits the air with little or no system to his methods of ventilation, thereby often more than counterbalancing the good effect of the fresh air by causing various ailments to be established among the herds and flocks through various ways.

What might be termed a "happy medium" between the above-named extremes in winter ventilation is the point toward which every farmer ought to strive. It is, of course, imperative that all the stock and poultry about the farm be furnished with comfortable quarters during the winter months, and correct ventilation not only promotes the good health of the animals, but a well-ventilated building actually is warmer and more comfortable than the one that has little or no ventilation, as the fresh air carries in that essential element to produce heat, oxygen.

There are some well-established principles that must be closely followed in supplying stock and poultry with fresh, pure air during the winter months. Air admitted through manure holes at the rear of stalls is far from proper ventilation. The same is true where air sweeps in at the bottoms of doors or under boards in the farm buildings. These openings as a source of air-supply should be kept tightly closed while the animals or poultry are in the stall, but when the buildings are vacated, these openings should be thrown open to assist in the airing out and purifying of the interior.

The air supply should enter a building in front of and above the animals in the stall. The outlet for foul air should also be in front, and still above the opening for admitting the air, since the fresh air, being heavier than the foul air, rushes in and forces the latter upward. Thus it is best if one can arrange the ventilator or other outlet opening near the center of a building so that, in case of a strong wind from either direction, the entrance of the fresh air will not be opposed from that direction, nor the rising and passing out of the vitiated air be checked. At no time should the air be permitted to form a draft over the animals or poultry in a building, as colds and numerous kindred ailments would result.

By the fresh air coming into a building as above advised the housed stock or poultry get the beneficial effect of it at once, before it has passed over the filth and dampness of the stall or roosting place. This furnishes them with a bounteous supply of the life-giving oxygen and enables them to throw off the impurities of the body, whereas, in case of an insufficient or improper air-supply, the inmates of the building breathe and re-breathe the polluted air till their bodies are poisoned and diseased. Improper ventilation accounts for colds, roup, kindred ailments, and a reduction of the egg yield in the poultry house; it establishes colds, influenza, and pneumonia among the horses, causing them to lose their normal vigor, hardiness, endurance and propagating qualities; in the dairy its damaging effects decrease the general health of the herd, lower the milk-producing capacity of every member, wield a most deteriorating influence on the quality of the dairy products, and in the end is, without doubt, the leading factor in establishing that dreaded disease, tuberculosis; it establishes colds, rheumatism and kindred diseases among the sheep and hogs, lowering the general health and stamina of the herd and flock to a degree that will result in a considerable falling off in the profits that should accrue from these sources. This supplying of pure, fresh air must not be spasmodic, at intervals only, nor in great abundance at one time and in limited quantities at other times—it must be furnished conservatively and regularly every hour, day and night, the inlet openings for air being regulated as to size according to the volume and speed of the prevailing wind.

SOUTH AMERICAN ACTIVITY.

That South America looks forward to the day when its immense undeveloped tracts will be farmed as scientifically and as productively as are the richest sections of the United States is evidenced in more ways than one, none more conclusive than the eagerness with which various South American countries are engaging American farming experts. Here is the latest evidence in a newspaper dispatch from Washington:

Argentina is about to obtain the services of two agricultural experts from this country, it was learned here today from unofficial sources. They are Dr. A. D. Melvin, who has been chief of the bureau of animal industry since 1905, and Willet M. Hays, formerly assistant secretary of agriculture. The former's work will be along the same lines as in this country, while Professor Hays will be engaged in the development of rural economics.

Dr. Melvin is now on his way home from Argentina, where he went several months ago at the request of Secretary Houston to study conditions of the meat industry of South American cattle exporting countries. When Dr. Melvin left here it was expected he would be gone about six months.

The department of agriculture in the last few years has furnished a number of experts in various lines to South American countries, among them being Dr. Melvin's predecessor, Dr. Daniel E. Salmon, who returned only a few months ago from Uruguay.

The agricultural possibilities of South America can hardly be overestimated, provided the human equation (the working element) can be brought up to the standard it has attained in America. Tropical conditions may make this impossible, but South America intends to try the experiment thoroughly and without undue waste of time.

If the horse is of a nervous habit always give him warning by voice before you approach, says the St. Louis Globe Democrat. Never step up behind him suddenly and startle him. If it is inherent viciousness, better give him to understand that you are master by giving him a few lessons for subduing just such cases. Then, when you step up to go into the stall, tell him sharply to "stand" over, watching your opportunity to glide up to his head and take hold of the halter. You must not do this until you see him quail a little under your eye. If the horse is treacherous better have a looped cord over his nose, running back out of the stall, and as you step up and give your command give it a sudden jerk, which will distract his attention and give you the desired chance to slip in. Not the least sign of fear must be shown in action or voice. The horse is an acute observer in this direction.

Charcoal is recommended as an absorber of gases in the milkroom where foul gases are present. It should be freshly powdered and kept there continually, especially in hot weather, when unwholesome odors are most liable to infect the milk.

I Use SalTone On My Own Stock Farm

JOHN E. ROBBINS, Stockman

Mr. John E. Robbins is the President of this Company. He manages its affairs himself. Mr. Robbins has been raising hogs, cattle, horses and sheep for thirty years. He probably knows as much about the feeding and care of farm animals as any living man.

In compounding SalTone Mr. Robbins was assisted by Dr. C. B. Ainsworth, the well-known veterinarian. The SalTone formula has been worked out from both the practical and scientific side. Experience shows it is just right. Mr. Robbins has not lost one animal from parasitic diseases in the last twenty years. Farmers who have tried SalTone know it is right, too, and say so.

All Farm Animals Wormy?

Yes, practically all of them are; authorities say nine-tenths of them. You may not *see* them, but that's the worst part of it. If you could see the worms you wouldn't stand for them a minute. These parasites fasten themselves to the stomach and intestines of your animals where you can't see them.

If you will give your animals SalTone you will see very quickly by the way they pick up that they were wormy. SalTone is a medicated salt, not a food. Animals take it like salt. It's a tonic to the animal, but *sure death* to intestinal parasites.

How Do They Get the Worms?

They pick them in the form of larvae from the grass. A larva is a maggot, the second stage in the development of the worm. The egg is the first stage, the larva the second, the worm the third. Like the butterfly with its three life periods—the egg, the caterpillar and the butterfly.

Eggs, maggots, worms; then more eggs. There is neither beginning nor end—no, that's a mistake—there's an end and a mighty sudden one *if you use SalTone.*

Self-preservation Parasite Law

Nature has given all living things the means of perpetuating their existence. To the thistle she gives a soft, downy balloon with which to start out in life. She gives the maple seed-wings, the dandelion a parachute, and to other weed seeds nice little hooks to use in grabbing anything that happens to come their way. Then they start out for a free ride to some distant point where they can begin life away from the crowd at home, just as country boys like to leave the farm and go to the city and city boys long for the country.

Let's begin with one of these common forms of parasites—a worm in the stomach of one of your hogs. It lives in the dark and has only two objects in life—to live and to reproduce itself. But it's nice and comfortable down there, and unless you take a notion to give your hog some SalTone this worm has nothing to worry about, so it lives by eating *the food you gave to your hog.* It reproduces itself by laying eggs.

Plenty of Eggs

These eggs do not hatch out in your hog's stomach. No, indeed; nature has fixed that. Just as nature gives the thistle an airship in which to sail away to new fields, she fixes the worm eggs so they cannot hatch until they get away from the parental roof. The eggs simply pass through the animal and are dropped to the ground. The mother stays at home and lays more eggs; her children have to shift for themselves. But, never mind—*they know how to do it.*

Then Come the Larvae

These eggs after dropping on the ground, lie there for some time and then hatch out into maggots. If the weather is warm they hatch out quickly; if it is cold they wait until spring. Then these larvae crawl into the little pools of water or climb upon the blades of grass that are wet from the dew or rain. Until something happens they will be nothing but just plain, nasty maggots. Let's see what *does* happen.

And Then the Stomach Worms

Along comes another of your hogs and takes a drink of water from the pool, or he sees a nice, juicy blade of grass and bites it off and swallows it, maggot and all. The maggot clings to the hog's stomach and then gradually another change takes place. You have seen a tadpole change into a frog? Well, this maggot gradually changes into a stomach worm and proceeds to lay *more eggs*—and there you are.

Can You Beat It?—You Can

You can beat this worm proposition provided you tackle it at the right time, the right place and in the right way, but you can't do it otherwise. You can't destroy the eggs in the grass; you can't even find them; you can't destroy the larvae in the grass for the same reason. There is only *one place* where you can take a link out of this endless chain and break up the combination—you can kill the worm that lays the eggs while it is in the stomach of your hog; *you can do it with SalTone.* When you kill the worm you put an end to the whole business, because no worm can carry on operations in the stomach of an animal that can get SalTone. SalTone drives the worms out and *keeps them out.*

What Does It Cost?

What does it cost you to do nothing and just let the worms keep on? Nobody knows. The Agricultural Department guesses that *$50,000,000.00 a year* is a low estimate. One thing sure, wormy animals can't possibly thrive like worm-free ones do. They can't gain in weight so fast. The worms won't let them. You can pour feed into them just like you got it for nothing and the worms always get their share *first.* The more you feed the animals the **stronger** and **more plentiful** the **worms** will be. You not only lose the food and the gain in weight that your animals ought to make, but everybody knows a wormy hog is not a healthy hog, and that a hog weakened by worms is the first one to fall a victim to cholera, pneumonia and other diseases.

What does it cost to get rid of the worms? Honestly it's so little that it's almost silly to talk about it. For the price of a *nickel cigar* you can keep one hog in perfect condition for sixty days—two solid months.

Is It Worth While?

It certainly is, and we will tell you why. Listen! We are going to prove to you that it's worth while for you to use SalTone. We are going to send you 100 pounds of it absolutely free of cost, except the small freight charge, and let you *try it for 60 days.* If it drives out the worms, tones up the animals and puts new life into them, then you pay us for the SalTone. If it doesn't, tell us so, and we will *cancel the charge.* You know we could not make this kind of an offer if we only **thought** SalTone would do these things. We have got to **know** it. You want to give SalTone a chance to save you money, to make you money, don't you? Of course you do. Then send us *the coupon* on the left. Do it today.

Thousands of Farmers Have Endorsed

SALTONE

The Great Wormicide and Conditioner

I feel quite an interest in SalTone. Before buying it I bought a similar remedy, but found it not half so good as SalTone. SalTone is "Al," and I appreciate it to the highest degree, because it has made my stock look many times better than ever before. I will never be without SalTone again and will recommend it to all my neighbors.—**Albert Miller, Batavia, N. Y.**

Our sheep exhibits at eleven fairs in 1912 won over $1,100.00, being defeated in few instances in a single class. We have fed SalTone, your medicated salt, for eighteen months, and our men are very enthusiastic about it. In fact, we would not think of raising Shropshires without SalTone to keep them in perfect health and free from intestinal worms.—**Zelora Green.**

SalTone is surely great. I saved a bunch of 30 hogs that certainly would have caused me loss without it. I would not do without SalTone as long as I had a hog on my farm.—**Louis Kautz, Higginsport, Ohio.**

I received your SalTone and have given it a fair trial, and find that it does all that is claimed for it. I do not expect to be without SalTone again.—**W. M. McMillan, Albany, Mo.**

Forty sows bred to "Big Defender," and al conditioned with SalTone, averaged in my sale $115 per head.—"**Big Feet**" **E. C. Caverly,** famous hog breeder, **Toulon, Ill.**

I am more than satisfied with SalTone I consider it the best stock tonic on earth. Every stockman should have a supply.—**Fred N. Greiner, Branchville, Indiana.**

SalTone is a great worm destroyer. We feed it to our imported horses and Hampshire hogs.—**J. Crouch & Son,** well known stockmen, **Lafayette, Ind.**

SalTone is the best stock remedy I have ever used, and I will not be without it again.—**Henry Meyer, Shattuc, Ill.**

Prices

40 lbs., $2.25; 100 lbs., $5.00; 200 lbs., $9.00; 300 lbs., $13.00 No mail orders filled for less than 40 lbs. SalTone is sold in "trade marked" packages—not in bulk.

Thousands of Dealers Now Sell SalTone

Ask Yours for It

The John E. Robbins Co., Greensburg, Ind.

THE JOHN E. ROBBINS COMPANY, Greensburg, Ind.

Ship me your special 100 lb., 60 day trial order of SalTone. I will pay the freight and tell you in 60 days whether it does as you say and if it does will pay for it. If it does not I owe you nothing.

Don't Half Paint

Low priced paint will only go half as far. It **looks** cheap on your buildings—doesn't protect properly—and can't last. In a very few months it will begin to "go bad"—can't last over two to three years.

It pays to buy good paint. Lucas makes good paint that will stay beautiful and in perfect condition for five years or more.

Lucas Paints

outlast all others because of the better quality put into them—64 years' experience back of every can. Made of materials that are not only highest grade but **proved** up to the Lucas standard by our testing chemists. Prepared and mixed with the most elaborate and perfect equipment in the country. Supervised in making by men of 25 to 40 years experience with us. Accepted as standard in color, weight and working qualities, only after most rigid tests. All this extra care and quality costs you little extra, but adds years to the service you get from Lucas Paints. Always demand them.

Free Book "When and How To Paint"

Tells how to judge and select the right paint for house and barn; how to put a new finish on furniture, floors, walls, beds, implements, vehicles, etc. Tells what finishing product to buy, how to prepare the surface, what brushes to use, etc. A most valuable reference book. Write for your copy today, giving name and address of your nearest dealer.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Horses and cattle were not intended to be wintered together in the same lot, and when it is a case of mules and cattle the combination is even more to be avoided. Mules are a nuisance with cattle in either lot or pasture. A mule will often get the better of a new-born calf in short order.

The only way some folks take an interest in their district school is to gossip about the teacher.

I find that dragging a road before it has dried sufficiently is work thrown away; travel only cuts new ruts behind the drag. Wait until the soil packs under the travel before dragging.

Public sales are going on full blast, with good prices for all stuff of value. Horses, perhaps, are not selling quite as high, as the winter feed bill looks big to purchasers, but towards spring prices will no doubt go higher. The outcome of the sales certainly does not indicate that the country is "going to smash."

If you want to keep sweet potatoes as long as possible, pick out solid, perfect specimens and wrap in newspaper and pack in barrels or boxes, then store in a dry cellar or cave. I know by experience that any potato or apple will keep better and longer stored in this way.

Knowing that all seeds will be high in price next spring, more farmers than ever before are getting hold of what they need this fall, before everything gets in the hands of dealers and speculators. Last week I bought four bushels of alfalfa seed I expect to sow in the spring, and also got the same amount for neighbors. We all figure the price will be $2 to $3 higher in the spring.

The man who would winter stock cheaply this winter must expect to make liberal use of wind, as both hay and grain will be high in price. We used to hear a good deal about roughing horses through the winter, but this time even the "roughing" will be costly.

The neighbor boys are getting traps together for a winter round of trapping. There is both money and fun in it, and sometimes, when a certain smellful animal is caught, there is a third quantity to be reckoned with. A boy never minds the smell, however. All he thinks of is to get a whole hide.

In grandfather's time when a new ax or hammer handle was needed it was shaped out of the best timber grown on the farm. It took a little time to make it, but the handle would last half a lifetime, barring accidents. Nowadays, we visit the hardware store when we want a handle, and pay a good price for an article that does not last long. This generation doesn't seem to care so much if an article is shoddy, just so it is easily obtained.

Don't peddle hearsay, particularly about school affairs. Hearsay never is improved by the passing, on process, and very often it causes trouble in an otherwise perfectly harmonious school district. Parents upholding the doings of the mischievous scholar are also troublemakers.

The automobile may have its drawbacks like all other things that are worth striving for, but it also has many good points in its favor. That it will be a great factor in bringing real good roads goes without saying. In a way it brings neighbors closer together and makes the farm more pleasant to live on. According to my notion the chief drawback about the automobile is that quite often a weak brain guides the hands that are on the steering wheel.

Five cents per bushel seems to be more than the farmers in this vicinity are willing to pay for corn husking and quite a number have bought machine huskers. One of these with an elevator at the crib makes short work of a cornfield, but it must be admitted that the expense account is nearly the same.

A coat of whitewash will make the barn or stable lighter and more pleasant to work in and also more pleasant for the cows and horses that must stay in about all the time from now until spring. The habit of whitewashing must be acquired like all other habits. The first coat comes hard, but after that the succeeding coats are easy.

Any fine day from now on is the right day for wrapping young apple trees to prevent the rabbits from girdling them when the snows come. Don't forget to bank them up a little with fine earth or the mice will be quite likely to damage them. It takes a lot of work to get an orchard started, but when the trees come into bearing the hard work will soon be forgotten.

Where both landowner and tenant are "soil robbers" it will not take long to put the farm in the proper shape for them. We all feel that safe-breakers are served right when they get away with only a few pennies or postage stamps for their work and all robbers should be in the same class.

The "weeding out" of dairy herds has been advocated quite strongly during the past few years and no doubt the practice has been of advantage to those who are trying to build up dairy herds. It has also been of advantage to beef raisers. The price that those dairy "weeds" have been bringing has opened the eyes of many to the possibilities of the beef type of cattle.

It is quite generally understood that all seed grain should be run through the fanning mill and only the very best selected for seed. If as much care was used in selecting the bull that is to head the herd for three or four years we would have less "weeding" to do in beef and dairy herds.

CORNSTALK DISEASE.

The department of agriculture has given out the following statement with respect to the danger of turning cattle into fields with standing cornstalks and to show that stalks should be cut and cured and fed in the barnyard:

Farmers in the corn belt, especially in the middle and upper Mississippi valley, have at various periods experienced loss of cattle pastured on standing cornstalks after the corn has been harvested in the autumn.

An element of mystery has surrounded the death of cattle in these instances. The disease is characterized by a very rapid course; in fact, very commonly there are no premonitory symptoms, and it is not unusual for the owner upon visiting the field in the morning to find one or more fat cattle dead which on the previous evening were apparently in excellent health.

Another peculiarity of the disease is that losses may occur on one farm or in one field while cattle on an adjoining farm or in an adjacent field may be free from the affection.

Various investigators in the past have attempted to discover some germ or some toxic substances which might be determined as the cause of this condition, but thus far the cause of the disease has not been established.

As death of stock from this affection is generally sudden and there is little opportunity for treatment, animals should not be turned into a field with standing stalks.

As a matter of fact the disease may be actually prevented by cutting the stalks early and only feeding them after they have been carefully cured and removed from the field. Losses from feeding on standing cornstalks emphasize the economic value of cutting the corn and feeding the stalks in the barnyard or corral, or, better still, shredding the dry stalks, under which conditions they may be fed with the least possible waste.

The so-called cornstalk disease should not be confused with poisoning from eating sorghum. Deaths among stock from eating sorghum have been traced to prussic acid poisoning, which poison the sorghum under certain conditions of growth has been found to contain in combination.

THREE BIG PAPERS $1.25.

CURRENT EVENTS

THE MEXICAN election proved a miserable fiasco, no choice resulting. Out of 3,000,000 eligible electors, less than 100,000 availed themselves of the opportunity to vote. The Mexican constitution requires a vote of at least 1,000,000, so the election was declared invalid. The trouble undoubtedly was that the rank and file of the people were either afraid to vote (fearing that the lack of secrecy in the ballot would lay them open to the attacks of General Huerta, the provisional president, if he were not re-elected) or believed that their vote would not be counted if the result were not pleasing to him. Only a few days before the election, Huerta imprisoned the entire congress and as it is this body which has general supervision over the presidential election, and the right to canvass the vote and declare the result, it was a foregone conclusion that he would dictatorially make the election come out as he chose, regardless of how the people might express themselves at the polls. The result of the whole fiasco is that Huerta remains in office, because no choice was made at the election. He will continue to rule until a new election can be held and the required number of people vote. It is almost a foregone conclusion that unless forced to terms by the United States or the rebels he will not order this election very soon, inasmuch as he remains in power in the meantime. Great Britain has simplified the international situation by declaring that it will consult the United States hereafter before taking any steps in the Mexican affair. Unless the United States recognizes Huerta he will be unable to borrow money with which to carry on his government. This lack of funds may bring him to terms, rather than any conviction that the people should have a vote and right and honor should prevail.

A CONTROLLING interest in the Rock Island railroad, one of the principal lines traversing the grain belt, was sold last week to the New York banking house of Phelps, Dodge & Co. It is announced that the transfer means a change in the head management, but that the men who are actually operating the railroad will be retained. The Rock Island is a great system, traversing one of the richest sections of the country. Its service has been allowed to lapse, however, in recent years, and there have been repeated rumors of financial difficulties. The public, which is dependent upon the Rock Island and which remembers the splendid service rendered a few years ago, is hopeful that the sale will mean a turn for the better. There is no reason why this railroad property, being of immense value and of even greater need, should not be made to yield profitable returns when conducted in a strictly businesslike manner. There has been a general shaking up of dry bones in numerous railroad organizations within the last year or so, almost invariably with good results. The grain belt is hopeful that the Rock Island transfer means big things both for the system and for the public as well.

CONGRESS hall, in Philadelphia, in which the senate and the house of representatives sat from 1790 to 1800, has been restored to its original appearance and has been re-dedicated by President Wilson. The president took advantage of the occasion to argue that it will not do to live in the past alone, nor to be content with the manner in which life was lived and the country governed in the days which were far simpler than they are today. He argued that there are greater problems being presented in Washington, and throughout the country generally, today, than ever before and conditions call for strength of purpose and courage of conviction more than ever before. He summed up his plea in these sentences: "My theme here today, my only thought, is a very simple one. Do not let us go back to the annals of those sessions of congress to find out what to do, because we live in another age and circumstances are wholly different. Let us be men of that time, let us feel at every turn the compulsions of honor and principle which they felt." President Wilson has a very happy knack of public speech and a Rooseveltian enthusiasm for simple words and plain morals. He followed his Philadelphia visit with a trip throughout the South, being everywhere enthusiastically greeted, due, in part, to the fact that he is a southerner himself, the first to occupy the presidential chair since the civil war.

CLOSER trade relations between the United States and the various countries of South America, to the profit of all concerned, are predicted by Theodore Roosevelt, who is making a six months' tour of the South. In the course of his first speech, delivered in Brazil, he declared that the development of South America will be the most striking growth feature of the twentieth century. He pledged the friendly and moral support of the United States, which, he declared, is sincerely interested in the upward efforts of every country and people, particularly those of the new world. There is a growing conviction that tomorrow belongs to the countries of the South, both of Central and South America. Capital from the United States is being poured into these countries in a steady stream and much of the development is being forwarded by American brains and brawn. When Philander C. Knox was secretary of state, in President Taft's cabinet, he made a trip throughout South America, somewhat similar to the one now being taken by Colonel Roosevelt. He further cemented the friendly relations of the two countries and promised co-operation in bringing tropical conditions up to a still higher plane. It is undoubtedly true that greater opportunities for American capital are to be found throughout South America than anywhere else on the globe, while American labor is going there in larger quantity than ever before. The financial value of friendly relations with such countries as Venezuela, Brazil, Chile and Colombia can hardly be overestimated, as they will mean an increased market for American products and a constantly widening sphere of mutual profit. Colonel Roosevelt's visit should do much to augment the friendly relations upon which future commercial profit depends.

AMERICAN STEEL & WIRE CO.'S

Thoroughly Galvanized Wire

A New and Decided Advance in the Manufacture of Wire for Woven Wire Fences

A Galvanizing of Great Durability, Originally Developed and to be Found only in the American Steel & Wire Co.'s Fences

THE American Steel & Wire Company is the first to develop a THOROUGHLY GALVANIZED WIRE. It has a thicker coat, a quality more refined, and a deeply adhesive contact of the zinc and the steel that solidly unites the two metals, highly flexible without injury, and having a finish and weather resistance unequalled—a *thoroughly galvanized wire.*

There are wonderful records of super-extraordinary efficiency, such an an auto tire lasting 30,000 miles; a pair of shoes, suit of clothes or a wagon showing astonishing durability; two ships built exactly alike, one being vastly better; or a certain piece of woven wire fencing apparently indestructible under long years of severe trial.

Years ago, in making and galvanizing steel wire, we searched out the reason for this spasmodic super-excellence, and found it to be the *chance combination of a high state of perfection*, in the finest detail, of *man, methods, machinery* and *materials.* We then mastered these fickle elements of chance by the employment of a tremendous manufacturing organization and brought them under control for steady and continuous production.

We now announce the final completion of our facilities for the extensive and permanent production of this thoroughly galvanized wire. We shall use it in the manufacture of our celebrated woven wire fences—the AMERICAN FENCE, the ELLWOOD FENCE, the ROYAL FENCE, the ANTHONY FENCE, and all our other fences.

These fences are adapted for all field, farm and poultry uses, and possess superior structural advantages in quality of steel and fabric. Dealers everywhere throughout the country display these fences and will quote lowest prices.

They cost no more than other fences, and considering the *extra large and heavy wires* used, and the exclusive use of new *thorough galvanizing*, makes them especially attractive as the best and cheapest fences.

Gold! Here it is! $1,000 Easy!

Every winter—when farm work is light—you can clean up $600 to $1000 shelling corn for farmers all around you. Lots of hustlers with Sandwich Corn Shellers make more than that. They get first call and biggest pay for shelling the neighborhood crop. For every thoughtful farmer wants the cleanest, best looking corn to market. He knows from boyhood up that Sandwich-shelled corn grades highest.

SANDWICH Iron sides CORN SHELLERS

They do not rub, scrub nor mash the corn or cob. You could not do a neater, cleaner job by hand. For Sandwich Shellers are built on the hand-shell principle. And though widely copied, they are yet to be equaled after *57 years of leadership!*

The frame is selected oak with iron top and heavy iron side panels. They can't wear out. *William Arnold, Red Oak, Iowa, shelled 1400 bu. in 7 hours last fall with a Sandwich 4-hole, in constant use since 1868!*

Made in 2, 4, 6 and 8-hole sizes, easy adjustable spout front, tilting steel plate elevator never needs to come off, patent force feed, strongest feeder chains in use on any shellers, biggest capacity with least power and lightest draft.

We cut out the jobbers' profits by selling direct to you through our own organization of branches and agencies everywhere.

Great Book FREE

Every wide-awake man with a team or an engine should write quick for our Free Corn Sheller Book and we will turn your idle power into gold.

Wherever you live, however much or little corn there is to shell, our book shows a Sandwich Sheller built to meet your needs. A postal brings it postpaid by return mail. Address today without fail

The Eighth National Dairy Show

A Continent-Wide Movement Designed to Improve the Dairy Cow and Aid Every Collateral Industry—Harmony in Dairy Interests at Last Achieved

WHAT the great International Live Stock Exposition has accomplished in fostering the interests of beef cattle and the utility horse, the National Dairy Show is endeavoring to work out in behalf of the dairy industry and all its collateral branches. With the passing into history of the eighth national show which was held last week in Chicago, it must be set down that a very marked degree of success has crowned the efforts of those who have been championing this cause at a time when it amounted almost to an offense to men who are now its stanch friends. Its history in the past has been too often written in words of woe because of an enormous deficit that annually faced the management. Under the general management of W. E. Skinner, the same Skinner who for many years so successfully handled the International Live Stock Exposition, this dairy show has been headed in the right direction and such conflict of dairy interests as may have existed, in the past, have, through Mr. Skinner's diplomacy, been entirely wiped out.

The program as carried out last week was almost educational in character. There were something like twenty-eight associations assembled in annual meetings and in concerted action the officers of these associations placed themselves on record to work in harmony in forwarding the best interests of this great show. In matters of this kind the public must first be shown before it will give its support and if there was a striking lack of attendance this year it may be counted on, now that it is an established national institution, that support will be given in this regard in the future just as has been the case in the affairs of the International Live Stock Exposition.

The National Dairy Show has many purposes, but its chief one is to eliminate the unprofitable cows from the feed yards of the United States. It is estimated at the present time there are fourteen million cows that are not paying their way. The introduction of sensible feeding methods might cut this number in two, but at the very least calculation there are seven million cows that should be eliminated from the herds of this country. In the educational program carried out last week some impressive lessons designed to this end were given. There were cows on exhibition, and some of them were fair looking cows, that, under the very best conditions, produced as low as 62 cents revenue for every dollar's worth of food consumed. In adjoining stalls were cows under exactly the same conditions that were bringing a revenue between $3 and $4 for each dollar's worth of food consumed. To the hearts and minds of thousands of dairymen this lesson was forced home last week by the exhibition made by the National Department of Agriculture.

This institution is rightly fulfilling its mission when it emphasizes the importance of correct methods of feeding and the experts who took part in the educational program last week accomplished much in the dissemination of knowledge relating to this important phase of the dairy industry. Of equal importance is the proper care and management of milk after it is produced. At this juncture in steps the manufacturer because there has grown up in this country enormous industries designed to satisfy the needs of the dairyman. Mechanical devices of every conceivable description used in connection with some phase of the dairy industry were on exhibition last week and these in themselves have an educational value that will be far reaching in effect. It is literally true that there were acres of dairy machinery on exhibition and the attention given to this branch of the show by those in attendance might be accepted as evidence that the dairymen of this country are progressive and that they are keen to bring into use every labor-saving device and every possible means that is available to place their dairy products on the market as free as possible from contamination. While presumably there has always been a business motive behind the interest which manufacturers have shown in this national institution, yet it should be said here and now that without the support that has come from this source the dairy show on its present basis would not be in existence. It is desirable, therefore, that there should be the greatest kind of co-operation between the man whose interest is in the cow and the manufacturer of various forms of dairy equipment.

It is most fortunate that the various dairy cattle associations have put their shoulder to the wheel to help along this cause. Educational booths were installed last week by the American Jersey Cattle Club, the American Guernsey Cattle Club, the Ayrshire Breeders' Association and the Holstein-Friesian Breeders' Association of America. Just as the various beef breeders' associations have been important factors in advancing the interests of the International Live Stock Exposition, so is it within the power of these associations to greatly aid the cause of the National Dairy Show. That they have started the work harmoniously is most commendable because only a dreamer can foresee the enormous amount of good that can be accomplished by the co-ordination of effort which was so strikingly apparent last week. A part of the financial strength of the various breed associations can be used in no better cause than to advance the interests of the dairy industry in general through the medium of the National Dairy Show.

It is not our purpose to dwell in these introductory remarks on the character of the live stock branch of the show last week because that is dealt with in detail in the report which follows. It should be said, however, that the 600 or 700 animals shown last week were made up from the best herds of the continent. The state fair circuit accomplished a most important purpose in eliminating or in sifting out those individuals and those herds that are not of the highest and best dairy type, thereby leaving for the contest of last week only the pick of the winners. In every breed and practically in every class the judges found animals of the very highest dairy type that has yet been reached and furthermore, in almost every instance, these were fitted with the very greatest degree of skill. In this was created the visitors' opportunity as presented not only in the judging ring, but in the barns where the various breeds stood side by side. As no clique or ring has ever controlled the judges who made the

THE AGED JERSEY COW CLASS AT THE NATIONAL DAIRY SHOW.

SOME GOOD TYPES OF THE AYRSHIRE COWS—A BREED RAPIDLY INCREASING IN POPULARITY.

awards at the past International Live Stock Expositions, so we believe the honors won last week were based on merit of the animal rather than on renown of the name of the owner.

No factor could be named which more fittingly emphasizes the importance of the dairy industry than the competition in dairy cattle judging which took place last week between sixteen teams from the various agricultural colleges. At the conclusion of the contest it was found that the six highest teams were representatives of the following institutions and in the order named: First, University of Missouri; second, Kentucky State University; third, Iowa State College; fourth, University of Nebraska; fifth, Maryland Agricultural College; sixth, Pennsylvania State College. This was the largest number of institutions ever entered in a national judging contest of any description, and it was said by those who were in charge of this educational phase of the show that the character of the work done by these young men was of the very highest order, equal, in many respects, it was said, to the judging of men with national fame.

Even disease as it is related to the dairy industry occupied an important place on the educational program last week. The close relationship between tuberculosis as it exists in the dairy cow and in the human was pointed out by Dr. Park and his view that the only way to guard the health of the human, and particularly babies, is to apply the tuberculin test and remove diseased animals, met with the enthusiastic endorsement of those who interested themselves in this matter last week. The disinfection of dairy stables was strongly recommended and cleanliness as applied to the handling of the dairy products was urged with much force and no doubt with good effect. Even on the dollar and cents basis it was demonstrated that cleanliness was, after all, economical, while sloth and slip-shod ethods were in the end the most extravagant.

One of the busiest departments of the National Dairy Show was presided over by Miss C. J. MacKay, of the Iowa Agricultural College, and Miss Isabelle Bevier, of the University of Illinois. These experts gave practical demonstrations to show how milk should be kept in the home, going somewhat into detail in the matter of handling it from the time the milkman leaves it until it is consumed. Instruction in home pasteurization and home sterlization was given. Attention was also given to the matter of handling sour and skim milk, including such products as sherbets, cottage cheese and lacto. Miss MacKay and Miss Bevier were able to combine inexpensive foods in such a way as to result in most palatable and nutritious dishes. For instance they gave a demonstration with twenty-five cents' worth of bread crumbs, cheese and beans and convinced their audience that with this amount of money the same food value could be obtained as in the purchase of $2 worth of beef steak. The sensible handling of dairy products alone will, according to the doctrine of the lady professors, greatly reduce the cost of living and incidentally contribute much to improve health and to increase the pleasure of living.

The creation of what is to be known in the future as the "Council of the National Dairy Show" was one of the real accomplishments of the week.

This embodies the interest of every class, including the producer, the manufacturer and the consumer, and unless the National Dairy Show can in the future, as it has endeavored to do in the past, foster the interests of these various classes, its purpose will be onesided and in the end it will be doomed to failure. Dr. H. V. Faville was elected president of the council, F. J. McNigh, vice-president, and Mr. W. E. Skinner secretary and general manager. There now follows a detailed report of the live-stock department, in which the reader will find a complete list of all prizes won in every breed and in all classes.

JERSEYS.

No greater surprise has been sprung in the judging ring of the show circuit this fall than when George W. Sisson, noted Jersey breeder, of New York, selected Noble's Eminent Lad, a two-year-old bull owned by Ed C. Lasater, of Texas, as grand champion of the breed. Yet his judgment was decidedly sound, and the young bull came very near to being the ideal type so much sought for by the many ardent admirers of this popular channel island breed. A still greater surprise of the day was occasioned by the selection of Ma of Fair Cows, a senior yearling, the property of J. B. Stump, Monmouth, Ore., as grand champion female. These honors were not easily earned, however, and it was a hard fought victory against worthy competitors. This year 135 Jerseys were shown, and besides being the greatest number exhibited at any similar show in some years, the breed was represented by the choicest animals on this continent, every section of the country being represented. The island type predominated, and seemed to be the popular choice of both judge and spectators. Competition in the cow classes was particularly keen, and it was only by a process of careful elimination in the several classes that finally one of the young animals was selected to carry off the royal purple. Elmendorf Farm, Lexington, Ky., and Ed C. Lasater, of Falfurrias, Texas, received the biggest shares of the money, Elmendorf being accorded the honor of being winner of most money on animals bred by exhibitor, and also of most money won by any exhibitor.

The exhibitors: John F. Boyd, Rushville, Ind.; C. H. Dewey, Morris, Ill.; W. S. Dixon, Brandon, Wis.; I. K. Dering, Lake Villa, Ill.; Elmendorf Farms, Lexington, Ky.; Nelle Fabyan, Geneva, Ill.; Jersey Isle Stock Farm, L. G. Vannia, Rushville, Ind.; Kingston Bros.; Avon, Ill.; Ed C. Lasater, Falfurrias, Texas; G. T. Slade, White Bear Lake, Minn.; J. B. Stump, Monmouth, Ore.; W. L. Ware, Batavia, Ill.; Henry Webster & Son, Minneapolis, Minn. The awards:

Bull 3 Years or Over—1st Fabyan on Ocean Blue; 2d Elmendorf Farm on Distinction's Noble; 3d Boyd on Derry's Jolly Lad; 4th Dering on Eagle's Chief; 5th Ware on Bill Taft Tormentor.

Bull 2 Years and Under 3—1st Lasater on Noble's Eminent Lad; 2d Boyd on Togo's Lad; 3d Jersey Isle Stock Farm on Rozel Sultan; 4th Webster & Sons on Combination You'll Do; 5th Slade on Noble Ruler.

Bull 1 Year and Under 2—1st Lasater on Sensational Nobleman; 2d Elmendorf Farm on Elverian Lad; 3d Lasater on Alice's Royal Majesty; 4th Dixon on Favourette Oxford Modeller; 5th Kington Bros. on Sultan Jolly Royal.

Bull Calf 6 Months and Under 12—1st Elmendorf Farm on Algerian Nobleman; 2d Boyd on Jolly Lad's Jubilee; 3d Dixon on Ibsen's Glory Shining; 4th Elmendorf on Majesty's Noble Lad; 5th Jersey Isle Farm on Plymouth Eminent.

Get of Sire—1st Elmendorf Farm on get of Noble of Oaklands; 2d Lasater on get of Imp. Stockwell; 3d Elmendorf on Noble of Oakland; 4th Lasater on

SHARPLES MILKER

The most important factor in dairying today.

The Sharples Milker means cleaner milk—a problem of serious import to the modern dairyman. It means a large saving in milk production. And it eliminates the most disagreeable part of dairying—the drudgery of hand milking.

Think what it would mean to you as a dairyman to be able to save more than a third of your present payroll. Remember, too, that the Sharples Milker is on the job every day, year in and year out, saving you all kind of worry and care.

You keep your cows healthier with a Sharples Milker. Its gentle, uniform action is soothing and restful, fostering milk production and keeping teats and udders in perfect condition.

The Sharples Milker is easy to clean and keep clean. The parts that touch the milk are few and simple—quickly cleansed.

Over 80,000 cows are milked every day by the Sharples Milker—at an enormous saving of time, labor and worry to their owners.

Send for the Milker Book—it has some valuable information for cow owners.

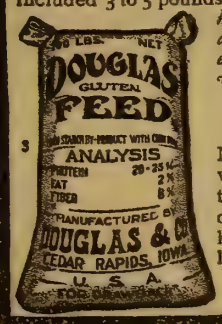
Over Eleven Thousand Pounds of Milk yearly, for four years—total butter yield, 3,253 lbs.—1,200 lbs. of butter expected this year. Thus did Sophie 19th of Hood Farm bountifully reward her owner, J. E. Dodge, Lowell, Mass., for his careful feeding. His wonderful Jersey's DAILY RATION FOR FIVE YEARS included 3 to 5 pounds of Gluten Feed. He says: *"Would not know how to produce milk economically without Gluten Feed."*

Sophie 19th of Hood Farm



DOUGLAS GLUTEN FEED

No matter what the size of your herd, Douglas Gluten Feed is the *safest, cheapest* available source of protein—the one essential milk-forming element woefully deficient in home rations. Don't feed to a loss. Balance with this highly efficient corn concentrate, and feed to a *handsome profit.*

GUERNSEYS.

Eighteen herds containing an aggregate of 183 animals, and representing eight of the leading dairy states of the Union, supplied the "classy" showing of the breed, which frequently induced the most favorable comment by men accustomed to seeing high-class exhibits of this great Channel Island breed. A noteworthy feature about the Guernsey showing was its general uniformity. That at least a large number of the breeders are attempting to breed animals which will conform to the most approved standard of type was plainly to be seen in the classes shown last week. The best judges are today looking for capacity, constitution and productive power, and a close correlation of the parts which they believe indicate these excellencies. The ideal of a great majority of Guernsy breeders is for business herds, and show ring qualifications are but incidental—at least secondary—to the ability to profitably produce a large quantity of milk and butter fat. Excellent as the advance register is, the promoters of the breed—and their number is rapidly increasing in the corn and grain-belt states—realize that if much effort is expended to develop star performers, this feature too may be overdone. "It is more important," said one well-known breeder, "that we have herds which average from 350 to 400 pounds per year, than that a few cows of phenomenal records be produced." No trouble was experienced by Geo. C. Humphrey, professor of animal husbandry at the Wisconsin College of Agriculture, in picking the grand champion bull, for no entry showed such a high standard of individual excellence as did Imp. Hayes Cherub 2d, owned by W. W. Marsh, Waterloo, Iowa. This young animal, imported last spring, has never been defeated in a show ring, and has just completed the circuit of our state fairs.

The exhibitors: E. H. Baker, Gates Mills, Ohio; Dr. T. W. Brophy, Edison Park, Ill.; Consumers Co., Chicago, Ill.; Nelle Fabyan, Geneva, Ill.; A. W. & F. E. Fox, Waukesha, Wis.; Iowa State College, Ames, Iowa; Maple Farm of Midlothian, Tinley Park, Ill.; W. W. Marsh, Waterloo, Iowa; W. F. Merkle, Chicago, Ill.; F. S. Peer, Ithaca, N. Y.; F. G. Thompson, Devon, Pa.; T. W. & I. W. Roberts, Bala, Pa.; Upland Farms, Ipswich, Mass.; E. A. Walters, Walworth, Wis.; Wiscinda Stock and Dairy Farm, Acton, Ind.; Westmoreland Farms, Oconomowoc, Wis.; J. H. Williams, Waukesha, Wis.; Wilcox & Stubbs, Des Moines, Iowa. The awards:

Bull 3 Years or Over—1st Marsh on Imp. Hayes Cherub; 2d Westmoreland Farm on Glenwood's Combination 5th; 3d Fox on Topsy's Count Yeska; 4th Maple Farms of Midlothian on George Washington of Fairfield Farm; 5th Thompson on Gascon de Rouvets; 6th Fox on King Talladeen of Chestnut Hill.

HOLSTEIN-FREISIANS.

W. W. Stevens, noted Holstein breeder, admirer of large type, symmetrical animals and owner of some of the greatest individuals of the breed, judged the exhibit of "black and white" cattle shown at the eighth National Dairy Show. In search of animals which combined size, ruggedness and which at the same time gave other promise of developing into efficient dairy machines, he was forced to retire some animals which had been consistent winners on the various state fair circuits, and to promote others which more nearly conformed to his ideal. Yet his sound judgment found favor with attentive and experienced Holstein breeders at the ringside. This year not as many animals were shown as have been on several previous occasions, yet eleven herds represented by 176 individuals made a showing which was a credit to the breed. Although several eastern exhibitors who in previous years have been strong contenders for championship honors did not show this year, the quality of the exhibit could not be said to have in any way depreciated. One breeder expressed the view that as time goes on the breed is improving in quality and many of the undesirable features are disappearing. The cattle shown were remarkably smooth, with good straight rumps, large, well-placed udders and a general symmetry of body. While those who are in a position to know, say that the refined dairy types are splendid for good dairymen and cattle fanciers, the Holstein is rapidly gaining in popularity among that class of farmers who aim only to grade up their herds in order to more completely supply the wholesale milk market, and increase the profits and production from an ordinary "scrub" herd. Perhaps no one breed on this continent is better suited to that purpose than the Holstein.

The exhibitors: G. M. Carpenter, Wilkes-Barre, Pa.; Geo. J. C. Copestake, Ames, Iowa; Dr. W. M. Downing & Bro., Waukesha, Wis.; M. R. Evans, Hinckley, Ill.; Wm. Everson & Sons, Lake Mills, Wis.; R. E. Haeger, Algonquin, Ill.; Iowana Farms, Davenport, Iowa; E. C. Schroeder, Moorehead, Minn.; Traverse City State Hospital, Traverse City, Mich.; Frank White & Son, Woodstock, Ill.; R. B. Young, Buffalo Center, Iowa. The awards:

Bull 3 Years or Over—1stHaeger on Paul Calamo Korndyke; 2d Iowana Farms on Ollie Johanna Sir Fayne; 3d White & Son on Groveland Inka Hylaard; 4th Haeger on Sir Spofford Beets; 5th Everson & Sons on Duke Johanna De Kol Mechthilde; 6th White on Cornucopia Pontiac Johanna Lad.

Pure-bred Registered
HOLSTEIN CATTLE

Doyou consider dairy farming a real business, a man's job or simply a side issue? Are you keeping high-producing Holsteins or just cows?

A good Holstein is little short of a perpetual motion milk-making machine, that while in milk uses her food for milk production and when dry stores up body fat to be converted into milk fat as soon as she freshens. She will earn 50 per cent on the cost of her feed. Why not keep this kind?

AYRSHIRES.

Three herds of International fame and represented by sixty-five head of handsome individuals competed for the honors and awards in this breed. Competition was keen despite the scarcity of exhibitors, and the breed received a greater share of enthusiasm and recognition than at any similar exhibition in the past. Heretofore corn-belt farmers have been of the opinion that the Ayrshire was a good cow where fodder was scarce, and the climate somewhat rigid. Of late, however, she has proven her adaptability to corn-belt conditions and has taken her place as one of our most economical and hardy milk producers. The Ayrshire will respond to care and feeding as rapidly and completely as any of our breeds, and will always hold the esteem of those stockmen who admire beauty, and tidy conformation in a dairy cow.

Mr. Hugh G. Van Pelt made the awards in this breed, and while his decisions were in many cases contrary to those rendered by other judges on the show circuit, they found popular favor with experienced stockmen and good judges at the ringside.

The aged bull, Bargenoch Gay Cavalier, was once more accorded the grand championship and was clearly entitled to this recognition. Mr. Seitz also secured the grand championship with his cow, Kilnford Belle 3d. The Wisconsin herd easily outclassed the other, and carried off the lion's share of the money. The special silver cup offered by the Ayrshire Breeders' Association was also won by four animals of Seitz herd.

The exhibitors: R. B. Ness, Howick, Ind.; W. P. Schanck, Avon, N. Y.; Adam Seitz, Waukesha, Wis. The awards:

Bull 3 Years or Over—1st Seitz on Imp. Bargenoch Gay Cavalier; 2d Ness on Hosland Masterpiece; 3d Schanck on Likly King of Avon.

Bull 2 Years and under 3—1st Ness on Burnside Lucky Cavalier; 2d Schanck on Victor Hugo of Avon.

Bull 1 Year and Under 2—1st Ness on Holehouse Wanderer; 2d Seitz on Bargenoch Rising Star; 3d Schanck on King of Avon.

Bull Calf 6 Months and Under 12—1st Seitz on Cavalier's Fond Memory; 2d Seitz on Cavalier's Leader of Fashion; 3d Schanck on King Columbus of Avon; 4th Ness on Prince Arthur of Humesbaugh.

Bull Calf Under 6 Months—1st Seitz on Cavalier's Fashion Plate; 2d Ness on Burnside Ben.

Cow 5 Years or Over—1st Seitz on Kilnford Bell 3d; 2d Ness on Auchenbrain Fanny 9th; 3d Seitz on Melrose Pender; 4th Seitz on Vilo Pender of S. C.; 5th Ness on Barcheskie White Beauty.

Cow 4 Years and Under 5—1st Ness on Benchan Spottie; 2d Ness on Hobsland Pansy; 3d Seitz on Imp. Hillhouse Maud; 4th Schanck on Lady Likly of Avon; 5th Seitz on Imp. Lady Mary Stewart.

Cow 3 Years and Under 4—1st Seitz on Imp. Beaucham Dorothy; 2d Schanck on Sibbie of Avon; 3d Seitz on Imp. Tower Tulip 2d; 4th Ness on Burnside Denty; 5th Seitz on Imp. Barleith Lily White.

Senior Champion Cow—Seitz on Kilnford Belle 3d.

Junior Champion Cow—Ness on Burnside Diana.

BROWN SWISS.

Sixty-seven head of Brown Swiss cattle were brought before H. G. Van Pelt by four different breeders. The breed was represented by several well-fitted herds of splendid individuals showing more refinement and dairy type than has heretofore been customary with this breed. The Brown Swiss are peculiarly adapted by their rugged constitutions to the rough, rolling land occasionally found in some of our middle western states. As their quality and type improve by careful breeding their adaptability and desirability in the dairy region of our country will directly increase, and already breeders are expressing optimistic views regarding the future rapid expansion of the breed.

The exhibitors J. P. Allyn, Delavan, Wis.; H. W. Ayres, Honey Creek, Wis.; E. M. Barton, Hinsdale, Ill.; Hull Bros., Painesville, Ohio. The awards:

Bull 3 Years or Over—1st Allyn on Myone Boy; 2d Ayres on Zell; 3d Barton on Faust.

Bull 2 Years and Under 3—1st Ayres on Zell A.; 2d Hull Bros. on McAvoy of Lake View.

Bull 1 Year and Under 2—1st Barton on Cleone's Junker; 2d Allyn on Ione Laddie; 3d Ayres on Ayres' Traveler.

Bull Calf 6 Months and Under 12—1st Allyn on Casper Brown of A.; 2d Barton on Goldwin; 3d Ayers on Zell I.

Bull Calf Under 6 Months—1st Barton on Vogistus; 2d Hull Bros. on Ben of Lake View; 3d Barton on Nichols.

Cow 5 Years or Over—1st Allyn on Arlene; 2d Allyn on Iown of Allynhurst; 3d Ayres on Merney.

Cow 3 Years and Under 5—1st Allyn on Belle of Grattan; 2d Barton on Vogera; 3d Barton on Leona's Girl.

Heifer 2 Years and Under 3—1st Ayers on Alice Hanson; 2d Barton on Florina B.; 3d Barton on Magnolia B.

Heifer 18 Months and Under 2 Years—1st Allyn on Show Girl of Allynhurst; 2d Ayres on Zell's Crocus; 3d Ayres on Zell's Brownie.

Heifer 1 Year and Under 18 Months—1st Barton on Magdalena L.'s Heifer of Sedgley; 2d Ayres on Miss Cincey; 3d Ayres on Miss Collier.

Heifer 6 Months and Under 12—1st Ayres on Zelia; 2d Barton on La Mack; 3d Allyn on Merry Maid of A.

Heifer Calf Under 6 Months—1st Ayres on Ermetta G.; 2d Ayres on Lady Jane A.; 3d Barton on Benedicta.

Exhibitor's Herd—1st Allyn; 2d Ayres; 3d Barton.

Breeder's Young Herd—1st Barton; 2d Allyn; 3d Ayres.

Breeder's Calf Herd—1st Allyn; 2d Barton; 3d Ayres.

Get of Sire—1st Allyn on get of Casper C.; 2d Ayres on get of Zell; 3d Barton on get of Junker.

Produce of Cow—1st and 3d Allyn; 2d Ayres.

Senior Champion Bull—Allyn on Myone Boy.

Junior Champion Bull—Allyn on Casper Brown of A.

Grand Champion Bull—Allyn on Myone Boy.

Senior Champion Cow—Allyn on Belle of Grattan.

Junior Champion Cow—Ayres on Zelia.

Grand Champion Female—Allyn on Belle of Grattan.

DUTCH BELTED.

In providing a display of Dutch Belted cattle, the management of any fair or exposition supplies a picturesque and novel feature. The breed has and in all probability will have but few followers in this country. One authority upon the breed has estimated that there are but a few hundred registered Dutch Belted cattle in the United States, and these he has found are widely distributed in at least twenty-six different states. There are, however, but few associations organized to promote, and if possible, popularize the breed. Two exhibitors, E. J. Kirby, of Covert, Mich., and Maplebrook Farm, Mason, Mich., furnished the display which was judged by Fred C. Minkler, animal husbandryman of the New Jersey Agricultural College. Kirby took all the first and most of the seconds in all classes having competition.

8 Million Men Look for the "Ball-Band" Sign on Rubber Footwear

That "Ball-Band" sign means *quality*. It means a lot more wear and more comfort than cheap footwear can give.

If you will figure the value of your rubber footwear according to the *cost per day's wear*, "Ball-Band" becomes the cheapest you can buy

"BALL TRADE MARK BAND"

Every article of "Ball-Band" Footwear gives such satisfactory returns for the money that it helps to sell other "Ball-Band" goods. When the wearer of "Ball-Band" Boots or Arctics wants a wool boot, he asks for the "Ball-Band" Coon Tail Knit Boot. Ours is the only high-grade all-knit boot of this character on the market.

Look for the Red Ball—if the Red Ball is not on the goods, you are not getting "Ball-Band" Quality.

If your dealer is not one of the 45,000 "Ball-Band" dealers, write to us. We'll see that you are supplied. Write anyway for free illustrated booklet describing "Ball-Band" Footwear.

The Watch You've Promised Yourself

When you were a boy, how you longed for a *real* watch! How you envied and admired that watch your schoolmate proudly displayed on his birthday. And how you vowed then that *some day* you would have one that would far outshine his—a fine watch in a gold case, and a watch that would keep *absolutely accurate* time!

"The South Bend" Watch

Now you are in a position to realize that boyhood longing. Now you can secure *the watch you've promised yourself!*

And what watch you know will compare with the wonderful South Bend—the watch so accurately balanced, so delicately adjusted, so perfectly tempered that it will run with barely a second's variation for twenty-four long hours frozen in solid ice?

Are you going to be satisfied with any watch that *won't* stand such a test? Are you going to buy a watch that you can't *show to your friends* with the feeling that it's the best watch made?

You can see South Bend Watches at your jeweler's in town. He'll explain to you why the South Bend Watch will stand such extreme tests as being frozen in ice or baked in an oven, why it is inspected 411 times in the making. Ask him especially to show you the "double-roller" South Bend—a master-achievement in fine watch-making.

South Bend Watches sell from $15 to $100. You can get either thin or regular models, plain or engraved case. But back of every one is the supreme South Bend quality that has made the South Bend "Cake-of-Ice" trademark the best-known watch trademark in America.

Write for our booklet "How and Where to Select a Good Watch." It contains facts you ought to know. We send it FREE. (196)

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

DAMAGE BY CHICKENS.

A Subscriber, Illinois.—During the last five years a neighbor who lives south of my place has killed ten of my chickens. When she killed the last two chickens my husband got a lawyer to make out a bill against her for $6 for all chickens she had killed. When she received the bill she went to another lawyer who made out a bill in her favor against me for damages done to her garden by my chickens. The woman's place is surrounded by places where chickens are kept and I have often seen other people's chickens scratching in my neighbor's garden. If the matter gets into court will not my neighbor have to prove that damages was done by my chickens before she can get damages?

Answer.—You are entitled to damages from your neighbor for the full value of all the chickens she killed, and she is entitled to damages from you for all the injury your chickens did on her premises. If the matter gets into court each party must prove the damage she claims, or she will fail to recover. Both parties are at fault and each party is entitled to damages from the other in this case.

FIRST AND SECOND MORTGAGE.

A Subscriber, Egan, S. D.—B holds A's note for about $1,500 secured by a chattel mortgage upon all A's stock, implements and growing crops raised on the place occupied by A. C also holds A's note for $90 principal and interest, secured by a second mortgage on part of said live stock and implements. B is willing to carry the loan of $1,500 on the first mortgage, but C wants to take legal steps to collect his $90 note at once. Can C bring suit so as to compel B to foreclose his first mortgage?

Answer.—C cannot bring any kind of a suit that will compel B to foreclose the first mortgage. C can foreclose his second mortgage, and leave his interest in the property sold to pay the ninety-dollar note. Upon such foreclosure the property will be sold subject to the first mortgage, and the purchaser will obtain the property encumbered by said first mortgage, and B can foreclose his first mortgage and have the property sold again, and the proceeds applied to the payment of his note, interest and costs, and if there be an excess the amount of such excess will be turned over to the purchaser under C's mortgage sale.

MARRIAGE LAW OF GERMANY.

A Subscriber, Tomahawk, Wis.—Is it lawful in Germany for a man to marry the daughter of his half sister?

Answer.—Such a marriage is lawful in Germany. The law of Germany forbids marriage between relatives by blood in the direct line. Persons of whom one is the descendant of the other are relatives by blood in the direct line. Persons who are not related by blood in the direct line, but are descended from one and the same third person, are relatives by blood in the collateral line. An uncle and niece are not relatives by blood in the direct line, but in the collateral line, and therefore a marriage between them is lawful in that country.

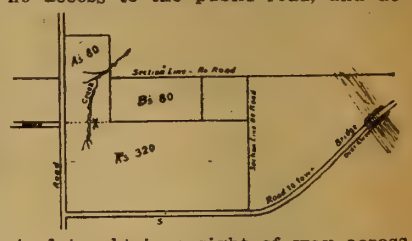
ANTE-NUPTIAL AGREEMENT—LOST MORTGAGE.

An Iowa Subscriber.—A widow living in Iowa had three children all married. She married a man in Nebraska. They agreed with each other before marriage that all property which the woman should own at her death should go to her children. (1) Would such agreement cover her share in real estate owned by her husband when they were married? (2) The woman died, and on her deathbed gave to her children all of her household goods. Can the children get possession of the goods without the consent of the husband? (3) The woman sold a farm to a son who paid no money thereon, but gave a mortgage on it for the price, and the mortgage cannot be found since her death. Can the son be compelled to divide the farm with his two sisters?

Answer.—(1) If the woman died before her husband she had no interest whatever in the real estate owned by the husband at the time of their marriage. (2) If the agreement before marriage was in writing signed and acknowledged like a deed, then her children would be entitled to all the woman's property at her death, without the husband's consent, but if said agreement was merely oral the husband would be entitled to the household goods. (3) If the woman made a deed of the land to her son he will not have to divide with his sisters, but is liable to the estate for the price he agreed to pay for the land. The lost mortgage might be proved and constitute a lien on the land.

ROUTE OF PRIVATE ROAD.

A Subscriber, Minburn, Iowa.—The accompanying diagram represents the lands of A and B, with roads, section lines, creek, river and bridge. B has no access to the public road, and desired to obtain a right of way across A's land to the public road. Can he have it located across A's 320 acres, or must it be located by the shortest line across A's eighty acres to the west road? If run by the latter route, the proposed road would have to cross a deep creek at the point marked X.



Answer.—The law of Iowa provides that such a road must not exceed forty feet in width, and must be located along the division line, or immediately adjacent thereto. We are therefore of the opinion, that in your case, the road would have to run from the southwest corner of B's land, directly west along the line between A's 80 acres and his 320 acres, to the road running north and south.

STRAIGHTENING CREEK.

A Subscriber, Waverly, Neb.—The accompanying diagram represents my land with Salt creek running through it. The stream is twenty feet wide and three feet deep, and it is ninety feet from bank to bank. (1) Would I have to obtain a permit from the state or county in order to straighten the creek by cutting a channel along the course indicated by the dotted lines? (2) Could the farmers lower down on the creek, lawfully prevent me from cutting such a channel?

Answer. (1) You have a right to straighten the channel of the creek on your own land, as indicated by the diagram, without obtaining permission therefor from either the state or county. (2) The farmers below cannot lawfully prevent you from doing so.

RIGHTS OF A TENANT.

A Subscriber, Manilla, Iowa.—rented a 120-acre farm from March 1, 1913, to March 1, 1914, and am living on it, but desire to move from it before the expiration of my lease, say about December 15th. The farm has been rented for the following year beginning March 1, 1914, to another tenant, and he has done some fall plowing on the place. Has he the right without my permission to move on the place and use the standing corn in the stalk fields?

Answer.—Having rented the farm for one year ending March 1, 1914, you have the exclusive right to have possession thereof till that time, and use the standing corn and stalks in the fields for your own benefit. The other renter whose term will begin March 1, 1914, has no right whatever on the place till that time, without your permission. The fact that you will move from the house about December 15th has nothing whatever to do with the matter. It does not give the other any rights he does not otherwise have.

FENCE CONTRACT—DAMAGE BY SHEEP.

Mr. John L. Hurliman, Coatesville, Mo.—F and B owned adjoining farms in Missouri. Five years ago, F sold his farm to H, giving good title, and also assigned to him a contract made between F and B about the line fence between said farms. Said contract provided that F and B should keep up a sheep-tight partition fence. F put in on his part a good sheep-tight fence, but B failed to make his part sheep tight. After H bought F's farm he lost the contract about the fence. B

TRAPPERS

You men and boys who add to your pocket money by trapping and selling furs—Listen! Our big new Book on Trapping is just off the press. We have a copy free for every man or boy who intends to trap. BAYER TANNING CO.
105 S. W. 9th St., Des Moines, Iowa.

showed his copy of the contract to H, and H saw that the word "sheep" had been erased from it, and B denies the word was ever in it. H's sheep got over on B's land, and H had a sheep-tight fence built on B's part, while B was in Canada. Last spring the heavy rains washed away part of the fence on B's part, and B did not fix it. H turned his sheep in his own field and they got in B's corn and did same damage. (1) Can B recover damage from H? (2) Can H recover the cost of the fence he built on B's part of the line?

Answer.—(1) B cannot recover damages from A because the injury caused by the sheep of H was the result of B's failure to fix the part of the fence he was bound to keep in repair. (2) H can recover by law the value of the fence he built on B's part of the division line. If a suit is brought in court about the fence, B can be compelled to show in court his copy of the fence contract.

LIABILITY ON NOTES.

A Subscriber, Rockwell, Iowa.—Last July I bought a farm in Minnesota, and got a contract for a deed. I paid $500 cash, and gave my notes for the balance of the purchase price, $1,000 to be paid on February 1, 1914, and balance extending over a period of eight years, with interest after February 1, 1914. The contract provides that in case I fail to make prompt payments I am to surrender the premises and all my rights thereto. Since the purchase, things have happened that may render me unable to make the $1,000 payment. In such event would I merely forfeit the $500 paid, or would I also be liable on the notes I gave for the balance?

Answer.—It depends upon the terms of the contract of sale. If the contract provides that upon your failure to make prompt payments you are to forfeit the $500, and surrender the premises, and the contract is to be rescinded, then you will merely lose the $500 paid, but if no provision is made for rescission and forfeiture, then you will be liable on your notes for their full amount. In any case you should not surrender the premises till your notes are canceled and returned to you. Have some good local lawyer examine the contract and advise you as to what its terms require you to do.

COLT INJURED BY WIRE—DAMAGES.

A Subscriber, Center Point, Iowa.—A's colts jumped over his pasture fence and ran over to B's pasture where he has some colts. B's gates were open to his pasture. The two herds of colts fought over the fence, and loose barbed wires were hanging on B's fence, and one of B's colts got badly cut on the wires. (1) Can B recover damages from A? (2) Can B compel A to buy the colt that was cut on the wires?

Answer.—(1) B cannot recover damages from A, because the injury to B's colt was partly the result of his own carelessness and negligence—loose wires and open gates. (2) He cannot.

RELEASE OF MORTGAGE.

A Subscriber, Conway Springs, Kan.—A bought 320 acres of land, and mortgaged the whole of it for a large sum of money. Could A sell and convey eighty acres of the land to B, and pay off a certain per cent of the mortgage, and give B a good and clear title to the eighty acres, or would A have to pay off the whole mortgage?

Answer.—A could not give B good title to the eighty acres without the consent of the holder of the mortgage; he would have to get the holder of the mortgage to sign and acknowledge a release of the mortgage as to the eighty acres. If the mortgage holder would not do so, there is no way by which A could give good title to the eighty acres, until the whole mortgage is paid.

PERSONAL EARNINGS EXEMPT.

X. Y. Z. Milton, Iowa.—Mr. A who holds the position of general manager or superintendent of a manufacturing company, at a salary of more than $100 per month, gave me his two promissory notes, one payable six months after date, and the other payable twelve months after, both payable at my home bank. He has not paid either note or interest, and both are past due. He has a wife; but no other family. We reside in different counties in Iowa. How can I collect the notes?

Answer.—The only way is to employ a lawyer to bring a suit on the notes, you can recover judgment against A for the amount of them and interest, and have execution issued against A's property. If A has no property subject to execution the collection will be probably difficult, and perhaps impossible, as the law of Iowa allows a debtor who resides in the state, and is the head of a family, to claim as exempt all his earnings for personal services within ninety days from the date of levy. A, having a wife, is in law the head of a family.

A SWILL BARREL ON RUNNERS.

To the Editor of The Homestead:

I belive in a variety of food for animals as well as for the human family, believing that thrifty growth is dependent on perfect assimilation of the food, which, in turn, is dependent on good digestion, and we have Shakespeare's word for it that good digestion waits on appetite, and appetite is only excited by a variety of wholesome food. A healthy hog has a good appetite, and, though he will eat food other farm animals will refuse, he wants and does better on that which is clean and wholesome, not the ill-smelling, decayed stuff that is found in the average "slop barrel."

A swill barrel on runners is convenient for moving from place to place and if filled fresh for each feeding and washed out thoroughly when emptied, then drawn into the shade so it will not dry out and leak, is a great convenience and also an improvement over the old kind.

Two runners are sawed out roughly from scantlings and are put together so that when the barrel is laid on its side across the sled the runners will be in about four inches from the ends of the barrel. The runners should be hollowed out on the top the shape of the barrel, so that the barrel will rest more firmly on the sled. Stout straps of hoop iron should also run over the barrel and be securely fastened to the runners in order that the barrel may not move about. Place the barrel over the center, from front to back of the lower side of the runners—not over the center of the top side. If the barrel is to be moved over sloping ground, the runners should be longer than might be used on level ground.

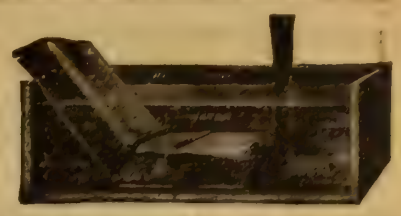
The barrel should be placed high enough on the sled so that, when pulled up to a hog trough, the end of the barrel will be higher than the trough. This makes it possible to pull out a plug and let the liquid flow by gravity from the barrel into the trough. A like result might be accomplished by having a raised place (a wood platform with an inclined approach or a ridge of earth) at the end of the trough, that would make the barrel higher than the trough when the sled was pulled up on the high part. But this last plan would make it inconvenient to move the trough frequently, which may be desired.

An opening in the top side of the barrel should be cut of a size that will permit slop or milk being poured in conveniently.

A coal-oil barrel that has been burned out or a lard barrel, if it has two good ends, is excellent for this use. It is a small matter when the harness is on a horse to hitch to this sled and get the slop or the milk to the hogs. Those who are raising a considerable number of hogs and perhaps keeping them quite a distance from the house to graze some crop that has been planted especially for them will find this sled idea a very good one.

It may be noticed that milk and slop may do worse than merely sour if kept too long before feeding; it may begin to decay without the feeder suspecting that any unfavorable change has taken place in it. Even though the animals that eat it are hogs, it is best not to supply them with decayed food. Subscriber.

Sweet clover seed weighs the same as red clover or alfalfa when it is free from hulls; that is, sixty pounds per bushel. It is a hard matter to take the hulls off in a common threshing machine, and many sow hulls and all, as it grows just as well that way. When seedsmen handle it the hulls have to be taken off.



NELSON SUBMERGED TANK HEATER

Note Construction. No heat going to waste, all passing under the water. Indispensable to all farmers. Pays for itself in two months with two cows. Burns straw, corn cobs, all rubbish, coal and wood. Ashes removed in a few seconds without disturbing the Heater. Heats water with one half less fuel than any other Heater. Let us send you a Heater on two weeks' free trial, just as we have to thousands of others. This heater is now in use in thirty states, and Canada. If not sold by your dealer, do not neglect sending for catalog and price, now while it is fresh in your mind. A postal will bring our catalog and testimonials free of charge.

Roof Your Silo With Steel

The **Economy Galvanized Steel Roof** is securely nailed to rafters which adds strength to the silo. It is permanent—easy to put on. When connected with a grounded wire protects your silo from lightning. The **Economy Roof** fits silos of all constructions. Wood, cement, hollow tile, brick or steel. It's cheaper and more durable than wood. Write for illustrated folder.

ECONOMY STEEL PRODUCTS CO., 20 N. Third Street, DES MOINES, IOWA

Education For Farm Life.

THERE are many angles from which to view this subject. We may look at it from the point of view of the farm boy whose future is at stake; of the farmer grown old on the farm, who is interested in the success of the rising generation; of the city dweller, fearful of the country's food supply; of the moralist, hoping for the maintenance of wholesome social and industrial ideals. We may share the feelings which Goldsmith recorded in his "Deserted Village" when he witnessed the gradual disappearance of the farming class:

"But a bold peasantry, their country's pride,
When once destroyed, can never be supplied."

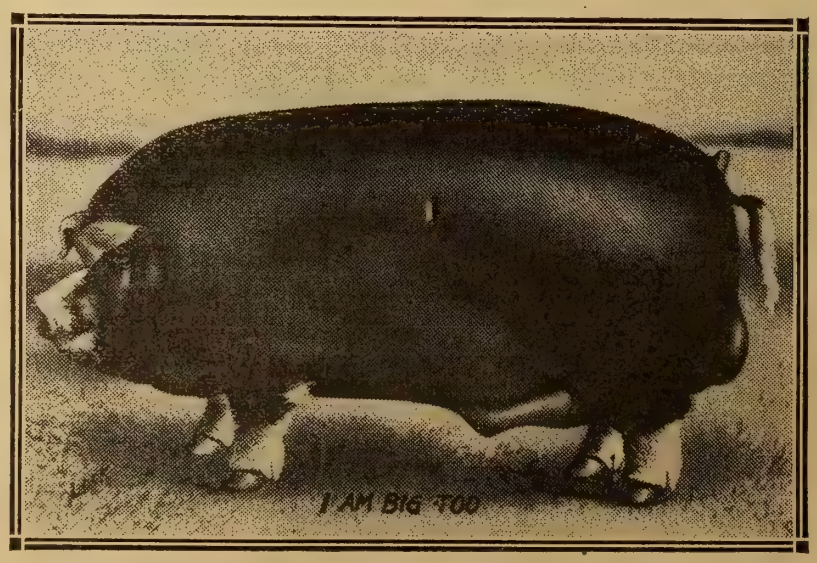
But whatever our point of view, we cannot deny that the problem is one of increasing interest and import. The great growth of modern cities presents a question to which " it is a tendency of the times" is no adequate answer; for we all know that urban life is the more artificial, country life the more natural, of the two. Hitherto, life in the country, while less thought-stimulating, has been by far more wholesome physically, and even morally, than city life. Whether or not in the future we shall be skillful enough to make our civilization distinctly urban, using the country only as a source of the city's food supply and as a dwelling place of a relatively smaller portion of our population, no one can say. In the past, at least, it has never been successfully done. Without the proper balance of city and country forces no civilization has ever become great. Brilliant city life and degraded rural life have existed together for a time, but never permanently. In view, therefore, of its relation to the nation's general economic welfare, education for farm life is a national problem.

Only within comparatively recent times has education come within the reach of any but a very few special classes. In medieval times education was for the priest and the clerk, to enable them to transact a little public business and keep the church records and other crude annals of the times. Even this, of course, had to be done in Latin, the general language of the western world, which was studied without any thought of culture.

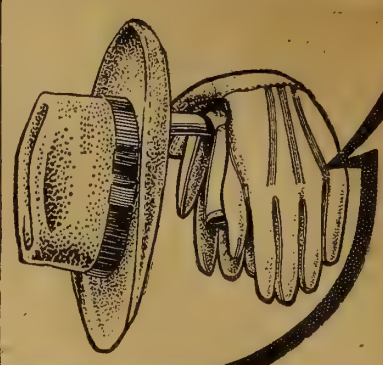
The farmer should be taught some conception of his own place in the life of the nation and of the world, and his own relation to the rest of society. His very isolation—now largely overcome by rural delivery, the telephone and the automobile—has, up to this time at least, given him a peculiar characteristic attitude toward his fellow men. Often he has been suspicious of the local physician, but a ready prey to the patent-medicine quacks. Often he feels perfectly sure that the local merchant is a robber, but is more than willing to buy sight unseen from the seductive pages of a mail-order catalog. He knows that he is likely to be the victim of selfish interests, but he does not always know that those selfish interests are, or how to identify them. Let me illustrate (the parties have now passed off the scene, so that I may speak freely): A number of years ago the principal of our school of agriculture used to meet the incoming boys and take up their trunk checks. At the end of each day he chartered a dray by the hour, loaded the trunks upon it, and distributed them at the boys' rooming houses. When he took up the checks he collected twenty-five cents from each of them and then after he had delivered the trunks at actual cost, refunded from five to seven cents. To get a heavy trunk hauled over three miles and delivered at one's house for twenty cents or less was, of course, a good business proposition. But the boys somehow came to suspect that the principal was in some way grafting from them, and their suspicion grew to such proportion that he became disgusted with the whole transaction, and told the boys that co-operation was at an end, and that in future they could get their trunks delivered any way they pleased. Since then they pay the standard drayman's price of fifty cents, and I presume are perfectly happy. I mention this merely to show how often the farmer's suspicions are misdirected and how by harboring them he defeats his own ends. I see no way to overcome these difficulties but by education of the future farmer, not only by school discipline, but also by a reasonable amount of urban life, by travel, by contact with all sorts and conditions of men, thus teaching him the difference between the real and the imitation, not only in the market, but also in human relations, in his intercourse with his fellow men, in life itself.

Another phase of the future farmer's development needs emphasis no less than its purely intellectual side. No one ever achieved great success who did not have or acquire joy in his work. Man is naturally lazy, and physically unwilling to do anything from a sense of duty or compulsion. He works because, coupled with his conviction that it is his duty to work in order to enjoy the fruits of his labor, he finds pleasure in the work itself. —[C S Avery, University of Nebraska, before Kansas State Board of Agriculture.

Plowing is said to be the hardest work known. Last year in this country there were 275,000,000 acres plowed, at a cost of $450,000,000. This means the turning of 2,000,000,000 tons of earth. Every five square miles of plowing means a distance traveled of 25,000 miles. It means a single furrow around the whole earth. Every loaf of bread requires the plowing of a furrow forty-eight feet long. To plow one acre is a whole day's work for on man and one horse, but it is only thirty minutes' work for one man and a tractor. In a test recently made at the Purdue University three modern tractors hauling fifty plows covered an acre in four and a quarter minutes.



The above is a true likeness of the noted boar, I Am Big Too, (a son of Dorr's Expansion) that heads the herd of H. F. Dodds, Florence, Neb. He is the sire of the great prize-winning boar, Futurity Jack, and he is also the sire of a great part of the sale offering of Mr. Dodds that will be sold at Florence, Neb., on November 13th. See advertisement on page 41.



Steady Service
Economy--First and Last

In a pair of Hansen's Gloves.

Keep *them* always ready—and you won't suffer from rusty nails, wire or any cold weather hand-troubles.

They outlast many others of the flimsy kind, and the saving in time and hand-health is *beyond price*.

Hansen's
Gloves and Mittens

Suit every job—every man. For harvest work or lighter chores—for driving, motoring or motorcycling, Hansen's give you the grip that holds, with "give" and softness. Price $1.25 up. All sizes.

Free book tells all about the perfect Hansen leather specially tanned to *last*. Will not crack or peel, stiffen or harden; easily cleaned in gasoline.

Write us for book and information where to order and how to buy, if your dealer doesn't sell Hansen's. Address

The Heider Tractor Again Leads Them All.

Runs Successfully on Either Gasoline, Motor Spirits or Kerosene

We have solved the fuel problem successfully. A simple device permits the use of either Gasoline, Motor Spirits or Kerosene at all speeds and puts our tractor in a class all by itself. A gallon of kerosene runs the Heider Tractor longer than a gallon of gasoline, and develops the same power, thereby doing the same work at less cost than any other tractor on the market.

The Heider Tractor Pays for Itself.

Its 4-cylinder motor, light weight, great power, simple operation, economical fuel consumption, make it the best, most practical, all-purpose one-man tractor manufactured. Investigate before buying. Write today for free book on Tractor Farming.

HEIDER MFG. CO., 270 Main St., CARROLL, IOWA.

MAKING POSTS AND POLES LAST LONGER.

(Continued from page 8.)

leum-tar creosote, coal-tar creosote and various patented products of coal tar and petroleum tar. Creosote is best applied hot. A barrel (fifty gallons) of this material should be sufficient to paint at least 300 posts with three coats for the butts and two for the tops.

In the brush treatment the preservative does not enter the cracks and checks. This defect can be overcome by dipping the posts in the preservative. This saves labor over the painting method. Yet, dipping requires a larger quantity of preservative, and, in addition, to the amount consumed, there must be enough surplus to keep the barrel or tank filled to the proper depth. This usually forbids the use of any expensive preservative for dipping. Petroleum tar, coal tar, and the creosotes may be advantageously used.

Posts have been treated by dipping the butt in cement. This is hardly satisfactory, owing to the ease with which the protective covering may be broken; moisture is absorbed after treatment and causes the wood to expand and crack the cement.

There is still another method of treating posts. It is known as penetration or impregnation. The wood is impregnated by prolonged soaking (a ten-hour bath) in the preservative at ordinary air temperature. This is a simple method, but better results are obtained by the use of a hot bath as well as a cold bath. The cheaper preservatives can be profitably used in the cold-bath treatment, for the same reason as in dipping. Creosote is usually the best preservative to use. Coal-tar creosote requires a slight heating to liquefy it. Crude petroleum lacks antiseptic qualities.

The impregnation of fence posts with creosote is best accomplished by the so-called "open tank" process. This consists of heating the wood for a certain period and then cooling it in the preservative. During the heating, the air and water are forced out; then, when the cooling takes place, the cells absorb the preservative.

The barrel outfit, shown in one of the pictures, is the simplest form of a treating plant. It consists of two creosote barrels, placed about seven feet apart and connected by a three or four-inch pipe. The heating is accomplished by building a fire under the pipe. This is considered a handy outfit, especially when only a few posts of readily impregnated wood are to be treated.

For treatment with creosote some importance must be attached to the size and form of the posts. The removal of the bark and the seasoning of the wood are important. At present many posts of large size are used in order to strengthen the fence after decay sets in. Such large posts are unnecessary if proper preservative treatment is given. The tops of posts should be cut obliquely to shed rain water. A bevel made with an ax is preferable to one made with a saw, because it is smoother. Beveling is particularly important if the tops of the posts are not to be treated. Under favorable conditions the average period required to season posts is five weeks. A simple method of determining the degree of seasoning is to weigh a few representative posts every few days. As a rule, an air-dry condition is reached when the loss of moisture is less than one pound per post (of five inches average diameter) during five days of good seasoning weather.

It is well known that different woods vary greatly in weight and strength. They also differ in the ease with which they absorb the preservative so that each species requires a different treatment if best results are to be obtained. In the experiments conducted by the forest service and its co-operators the purpose was to determine the best treatment for various woods. Most species will absorb too much creosote if a very long treatment is given. To make the work economical the absorption must be limited to four-tenths gallon per post if only the butt is treated, or six-tenths gallon per post if the top also is impregnated. Woods which are naturally durable in contact with the ground, such as cedar, locust, white oak, and black walnut, were included in the experiments. A heavy treatment is required to impregnate their sapwoods and their heartwoods cannot be successfully treated. These woods are too expensive to be treated and cost more than cheaper and equally satisfactory posts that can be had by creosoting an inferior wood. Such woods as beech, maple, pin oak, pine and sycamore are easily treated.

The cost per post for treatment will vary in different sections of the country. The size of the post will affect the cost. Creosote by the barrel varies widely according to locality. In the eastern states it costs 12 to 15 cents per gallon while on the Pacific coast it costs from 15 to 20 cents. Ignoring labor and fuel cost it may be safe to say that the cost of treating posts in the middle West will range from 10 to 15 cents each. In the prairie region of Minnesota willow posts of sufficient size to last fifteen years cost 25 cents each. A pine post when treated will last approximately twenty years. The post costs 18 cents untreated and 33 cents treated. The untreated post will last about four years. The statement has been made by the forest service, in one of its bulletins, that any post properly creosoted will last twenty years.

The experiments which the forest service has been carrying on emphasize the fact that in many localities the need for the preservative of farm timbers is imperative. It may seem to some farmers that the work is difficult. This does not mean that this work should be neglected. A small wood-preserving plant could be profitably operated in connection with a threshing outfit, a feed mill or sawmill. Several farmers could co-operate in establishing and operating a plant. As an indication of the success which should attend such an undertaking, the co-operative creameries of various sections of the country may be cited. It cannot be too strongly emphasized that every agricultural district or community should possess the facilities for increasing, by preservative treatment, the durability of farm timbers used locally.

RUSSIAN THISTLE GOOD FORAGE.

The use of the Russian thistle, long considered an enemy by the Kansas farmer, was indorsed by the horticultural department of the University of Kansas in an opinion announced by William C. Stevens, professor of botany, says a newspaper dispatch. Professor Stevens's conclusion is the result of a thorough study of the thistle question undertaken after a number of western Kansas farmers had announced the successful use of the Russian thistle in feeding live stock. Conservative farmers had regarded thistle feeding as a "crazy notion."

"If the weed is cut before the second leaves get their growth I see no reason why it should not make good feed for cattle," said Professor Stevens. "It would have to be cut when the first leaves are green to avoid the hard bristle of the second leaves. In some sections of the state it has been proven definitely that the thistle keeps for a reasonable length of time. The plant has nutrient value only a little less rich than alfalfa."

The Chinese wood-oil tree is the subject of a circular by David Fairchild recently published by the United States Bureau of Plant Industry, the publication being to advocate an extensive cultivation of the tree in this country, where it has been grown in a small way since 1906. The importance of this is shown by the fact that 5,000,000 gallons of wood oil (also known as tung oil), made from the seeds of this plant, was imported from China last year, and the product is said to have had a revolutionary effect on the varnish industry of the United States.

There's Economy, Comfort and Style in a **Lanpher Cloth Ulster**

YOU'LL enjoy its warmth and look well-dressed wherever you go.

The big features, of course as with *all* Lanpher goods, is the *quality*.

It's made in the Lanpher tailoring shops—the most modernly equipped in the Northwest, by skilled tailors of long experience.

Skimping is unknown in the Lanpher shops. The material, the workmanship, the finishing, *everything* must be up to the Lanpher standard—the very *best* of which we are capable.

Lanpher Coats are made to fit, to wear, to hold their shape, to keep you warm and to look well for several seasons. If you believe in the true economy of buying only quality clothes, you can't make a mistake in selecting a *Lanpher* Coat.

The Lanpher Sheep-Lined Coat

You buy a sheep-lined coat for warmth, comfort and rough wear. You get the utmost of these qualities in Lanpher Sheep-Lined Coats.

They're made in the Lanpher fur and tailoring shops. Besides using the best materials, we stretch and treat the sheep linings the same as we do our high grade furs. Then our expert tailors make them into coats in the same careful way as our higher priced fur-lined and cloth coats.

All these things show up in the Lanpher Sheep-Lined coat in better fit, greater wearing strength, more comfort and longer life. You get a great deal more for your money in a Lanpher Sheep-Lined Coat.

Write for the Lanpher Book of 1913-14 styles, if you want to know about Lanpher men's and women's clothing for outdoor wear, and where to buy them in your neighborhood

Lanpher, Skinner & Company

Saint Paul, : : Minnesota

Ladies: Remember Lanpher Furs are guaranteed. The Lanpher book mentioned above will guide you in the selection of becoming models. You can see them at your dealer's store before buying.

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

BLOODY MILK.

Have a red cow that came fresh a week ago. She is in good shape and seems well, but gave bloody milk at the last milking. There is quite a little blood in the bottom of the milk after it stands awhile. She ran on timber pasture and was fed corn fodder.

Bathe the udder with cold water three times a day and at night bathe with strong alum water. If she is not in calf give her one dram of dried sulphate of iron and two of salt in her feed night and morning until the milk is normal. Milk gently.

PADDLING.

How can I best correct the action of a mare that throws her feet out to the side when she travels fast? She is all right when she takes an easy gait, but when she goes fast she spraddles out behind and in front. She is three years old and was broken last spring.

The shoer may be able to somewhat correct the abnormality of gait by weighting the hoofs with toe weights which are adjustable; then he can weight the shoes when the proper place to put on the weight is ascertained. It is quite likely, however, that the errors are due to poor conformation and if that is so shoeing may not help materially.

FISTULA—BOILS.

(1) Two years ago I bought a nine-year-old Norman mare that had had a fistula which was supposed to be cured. She had a fine mule colt last June and worked all summer. In August her neck swelled up so she couldn't wear a collar. A veterinarian opened this and took out at least a gallon of matter and has been putting iodine in since. This place has been discharging matter all the time. Can she be cured? (2) Some of my milk cows have boils on their udders that burst and we can't use the milk.

(1) The fistula should be curable, unless it happens that a sinus (pipe) runs down back of the shoulder blade (scapula). The veterinarian should lay the abscess wide open and then cut out dead tissues, swab with tincture of iodine and afterward pack the cavities full of oakum saturated in a mixture of equal parts of turpentine and raw linseed oil. Renew the dressing daily. He should also treat the case with hypodermic injections of polyvalent or autogenic bacterin. (2) Swab the swellings with tincture of iodine once daily until soft; then open, evacuate pus and go on using the iodine until healing is complete. Infection, possibly from dirty floors, causes such conditions.

HEAVES.

A gray mare twelve years old has shown signs of heaves. What can I do for her?

Feed wet straw and roots or a little silage in place of hay and grain. Give her half an ounce of Fowler's solution of arsenic night and morning. Do not feed any bulky feed at noon, when there is work for her to do and do not work her soon after a meal.

DEATH OF COW.

Our two-year-old Jersey cow was taken sick and died inside of three weeks. We first noticed her moping around with her head down in the forenoon, though she gave her usual amount of milk, about five quarts, that morning. However, that night she gave only about one pint. The next morning she seemed a little better, but that night she got worse. We drenched her with raw linseed oil and gave her one-half pound of salts. She would lie flat down and occasionally look at her side and groan. She finally gave only a tablespoonful of milk that was yellow and thick. One morning I noticed a swelling along her throat under her head, which extended clear down her throat and finally she became swollen between her front legs. This seemed to be in cakes. On her right side the swelling extended past her front leg, and it seemed difficult for her to breathe. She would eat scarcely nothing from the start, although we gave her oats, rolled barley and bran with green and dry alfalfa. The oats passed whole. After she died we opened her and there was water around the heart and lungs. The outside of her heart had a greenish cast and a tumor on it.

The symptoms are such as we see in cases where a cow has swallowed some foreign body, such as a needle, pin, nail or piece of wire and it has penetrated the second stomach and pierced the wall of the heart. The lesions found on post-mortem examination also corroborate this diagnosis. There is no remedy in such cases.

TUMOR.

A sow two years old was weaned of her pigs last spring. Soon after an enlargement formed on her udder and it keeps growing larger. Would you advise me to cut it open or is there some medicine that will dry it up?

Rub the enlargement with iodine ointment each other day and if that does no good try oleate of mercury, used in the same way. We fear however, that the tumor is actinomycotic and incurable, unless you can have it cut out by a qualified veterinarian. Hogs do not well stand such operations, but tend to die of shock.

CHOLERA.

I have a strange sickness among my pigs and I have already lost two. They refuse to eat and get weak in their backs and their eyes get sore. I fed oats for two months, but have changed to corn now. They are running on pasture and I keep charcoal before them all the time in a self feeder, but them seem constipated. Fifteen are sick now out of sixty pigs that are all running together.

Hog cholera is in all probability present and you should at once employ a veterinarian to make an examination and vaccinate the remaining hogs. Cholera shows several different forms and this may be one of them; but a post-mortem examination would be likely to show ulcers and tufted sores on the lining of the large intestine and red spots on other internal organs.

BLACKLEG.

I have a pasture which seems to be infected with blackleg. Will you please advise me if the contagion stays in a pasture after once it gets there and if there is any way to get rid of it without plowing the pasture? How long is it before a cow takes the disease after being exposed to it? Does vaccination prevent the disease?

The contagion of blackleg stays in the pasture and we know of no way of getting rid of it. Drainage helps. In Europe it is a common practice to top dress affected pastures with crushed rock salt. Cows do not, as a rule, take the disease. It attacks cattle under two years of age. Vaccination, properly done with fresh, reliable vaccine is a certain preventive. Infection shows up in a week to ten days, and in virulent cases, may come on quicker than that.

BLOODY MILK—CATARRH.

(1) A three-year-old heifer fresh in July is in good health so far as we know, but she gives bloody milk out of one teat once in a while. (2) Have also an eight-year-old black horse weighing 1,400 pounds. He often has a thick, white discharge from the nose and coughs occasionally. Has good life and seems to be in best of health.

(1) Growths may be present in the milk duct of the affected quarter and if that is so they will have to be removed by a surgeon. Milk gently. If growths are not present foment the affected quarter with hot water three times a day, when the blood is seen in the milk, and at night rub it thoroughly with a mixture of one dram each of fluid extracts of poke root and belladonna leaves in six drams of druggists' soap liniment. (2) A diseased molar tooth may be the cause, and if so it would be removed by trephining, which will require a trained surgeon. If the teeth are sound and the horse is known to be free from glanders, give him a dram of dried sulphate of iron in his feed night and morning for ten days, then a dram of powdered sulphate of copper twice daily for ten days, then a similar dose of iodide of potash twice daily for ten days. Alternate these treatments until well.

Make Your Lame Horse Sound, Like This

You Can Do It While He Works.

We want to show you that there isn't any affection that causes lameness in horses that can't be cured, no matter of how long standing. We want to send you our instructive book, "Horse Sense" No. 8.

It describes all. And with the book we want to send you an expert's diagnosis of your horse's lameness. All this is absolutely free. Simply mark the spot where swelling or lameness occurs on picture of horse, clip out and send to us telling how it affects the gait, how long animal has been lame and its age.

We absolutely guarantee Mack's $1,000 Spavin Remedy to cure Spavin, Bone or Bog Spavin, Curb, Splint, Ringbone, Thoroughpin, Sprung Knee, Shoe Boil, Wind Puff, Weak, Sprained and Ruptured Tendons, Sweeny, Shoulder or Hip Lameness and every form of lameness affecting the horse. We have deposited One Thousand Dollars in the bank to back up our guarantee. Cures while he works. No scars, no blemish, no loss of hair.

Your druggist will furnish you with Mack's $1,000 Spavin Remedy. If he hasn't it in stock, write us.

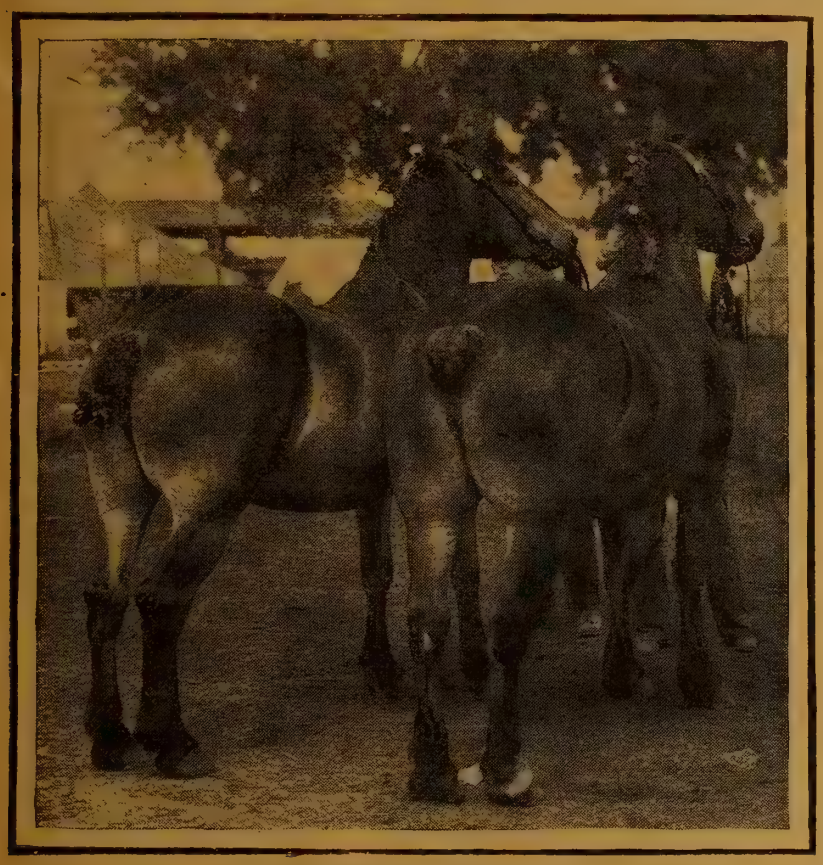
Methods By Which Both Renter and Landowner Succeed.

SOME time ago a farmer who owns a fair-sized farm saw he had a problem to face. He found it was getting more and more difficult to keep the farm work going. He had no boys of his own and the men he hired to help him were only fallible. His farm was an excellent one. Two hundred and forty acres of it were plowed land. He had a section of the best pasture land in the state in addition. This farmer decided to quit farming, and he was undecided whether to sell his land and put the money out at interest or to lease the farm to some man who had the help and who was an experienced farmer.

Hundreds of landowners are facing the same problem today, and the results obtained by this man when he rented his farm may give some idea of the profits which may be expected from land leasing. First, it is necessary to give a general description of the farm. It was well improved. The barn was a large structure, giving ample room for all horses and mules. The hay barn was large enough to hold most of the hay which would be mowed during the summer from forty acres of alfalfa. Around the hay barn the shed for cattle was built. Room



IMPORTED BELGIAN MARES.

Two high-class, prize-winning, imported Belgian mares owned by R. F. French, Independence, Iowa. He has this kind for sale. See page 42.

was provided for three car loads of steers. The stock cattle had a separate corral farther to the south.

There were two hog houses. One was built especially for the brood sows to occupy. Watering facilities were seen to; and the farm buildings and the stock corrals were in shape to give the best results and to prevent loss of time in handling the livestock.

An experienced farmer who was a rustler leased the farm. We will call him Williams. Williams and the landowner signed up the papers the first of March. The shares were to be half and half. After attending to the papers an inventory of the stock and grain on hand was taken. At the time there were about 170 head of cattle in the corrals, and over 100 head of hogs. Williams bought half the stuff. They were now even and future gains could be easily kept account of. The cattle and hogs were all passed over the scales, thus it was possible to figure accurately as to their present worth.

Williams was to furnish all the labor; the landowner agreed to keep the fences, farm buildings, etc., in repair. Williams furnished the horses and machinery necessary for running the farm. Williams kept thirty brood sows and planned to raise spring and fall pigs from them. The section of pasture was occupied by as many cattle as was wise to put in it. There were two loads of steers which would be ready for the feed corral in October, put in the first spring the farm was rented. The remainder of the cattle were stockers and cows with calves at side. Both Williams and the landowner were enthusiastic stockmen. They were interested in grain only because it was needed for feeding purposes. Corn was the grain Williams wished to grow in the greatest possible quantity. Of course, it would be necessary to change the ground occasionally to wheat, etc., but by heavy manuring Williams believed he could keep the ground in a good state of fertility without too frequent changing.

The spring pig crop that first year was rather unlucky. From the thirty sows Williams saved only 160 pigs. Some of the sows missed entirely; others had their pigs during cold weather and they chilled to death. It was the renter's intention to rush the pigs and get 'em to market during the first part of the coming winter. The sows were fed plenty of nourishing feeds such as bran, shorts and corn while the pigs were with them. When the pigs were weaned they were put in a pen for a few days until they forgot their mothers, then they were ready for the alfalfa pasture. While running upon the alfalfa during the summer they were fed a balanced ration of grain in addition.

The alfalfa hay was expected to be the most profitable crop harvested; so Mr. Williams planned in advance how to handle the successive crops with the least labor and loss of time. As most of the hay was to go into the hay barn sweep rakes were useless. Hay racks and a loader were required. The loader took the place of three or four men and never played out during some particularly hot afternoon. Hay slings were used, which made the labor of unloading practically nothing.

One hundred and seventy-five acres were put in corn. Williams was a soil specialist and adapted his seed to the different grades of soil. In the rich bottom land he planted big, bloody butcher and yellow dent varieties. The streaks of clay and thin soil were

What Do You Consider a Good Investment?

Eight per cent would be called good returns. Do you realize that owning your own scale and doing your own weighing will easily make 100% returns? Not in rare cases but frequently farmers who own

Fairbanks Scales

find the scales pay for themselves in a single season. They will yield just as good returns for you if you sell much produce or stock.

Until you have your own scale you must always wonder if you got full weight for what you sold or paid too much for what you bought; whether your stock is gaining properly, etc.

Buying Fairbanks Scales is in the highest sense an investment because you *only buy once.* Scales installed over 60 years are still in service and weighing correctly.

Scales for all farm purposes are described in Catalog No SR603 Write for a copy.

This Pair of Pliers is Free

I want to give each one of my readers my Combination Fence Pliers. No farmer can afford to be without one, especially when it costs him nothing. It will cut and splice wire, pull staples, grip rods and nuts, and has a screw driver attachment. There are hundreds of uses for this little tool. It also makes a handy household device. It is dropped forged from the best open hearth steel. It is case hardened and nickel plated. It is light and compact—only six and one-half inches long, which permits it to be easily carried in the pocket.

MY OFFER

Send me $1 for one year's subscription to The Homestead, either new or renewal, and I will send you a pair of these pliers postpaid, free of charge. Send your order in at once, as this offer is good only during November. It will positively be withdrawn December 1st. Address

put in white varieties which did not require so much soil nourishment. The corn was planted with a lister and surface planter. The ground, which had been in wheat the ear before and was fall plowed, was disked twice, harrowed smooth, then surface planted. The stalk ground was listed.

The farm machinery used by Williams was of the latest pattern. The listed corn was tended with a double row lister cultivator which had large disks to throw out the weeds, and, in addition, had two pair of small shovels to stir up the ground around the corn. Two times over with this machine, followed by good plowing with the regular cultivator, finished the corn up in good shape. Three mowing machines were put in the alfalfa meadow when the first crop was ready. Williams wished to have the hay dry as evenly as possible. Two rakes were used to put it in windrow ready for the loader. In handling alfalfa with a loader it was best not to let it get too dry. When this happened the leaves fell off, causing considerable waste. By the time the second crop was ready to harvest the first crop was well settled in the hay barn, and had thoroughly cured.

The alfalfa meadow yielded 175 tons from the five cuttings. The hay barn was filled and Williams was obliged to stack a considerable quantity in the open. This made it handy when the time came to feed the stock cattle and cows during the fall and winter; for the fattening steers took up all the room around the hay barn. During the month of October Williams brought the steers home from pasture and put them in the feed lot. He weighed them before doing so, and was pleased to see they had made a fine gain during the summer. This was not to be wondered at; for the pasture was an exceptionally good one. There was a moderate amount of old corn on hand, and the steers were fed this first. The convenience on this farm for cattle feeding were unsurpassed. An eight horse-power gasoline engine drove the feed grinder. A reservoir was kept filled with water so if something should happen to the cylinder or piping of the well, the steers would not need to suffer from thirst.

While corn and alfalfa formed the bulk of the feed stuff, other articles of merit were not neglected. Oil cakes and sorghum cake were fed in small quantities to balance the ration. No one throughout the country got better results from stock feeding than Williams did. He arranged his feed troughs for corn chop, etc., in a row straight south from the granary where he kept the feed. He rigged up a strong cable from the granary to the feed troughs, and upon this cable he ran a feeder carrier. This cut the labor of feeding in half. The hogs, which were being fattened for market followed the steers. The brood sows were kept in a separate enclosure, as were the fall pigs. The sleeping quarters of the fall pigs were kept dry and warm; clean wheat straw was used to bed all the hogs. The grain ration fed to the fall pigs was the same as was fed to the ones raised in the spring; but instead of the green pasture they ate alfalfa hay from specially prepared racks. The last crop of alfalfa was reserved for hog feeding, for it was more suited for the purposes, being more tender and tasty.

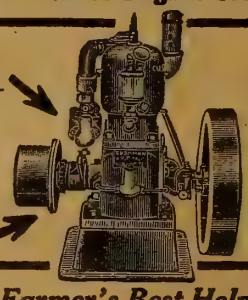
The steers were fed for 120 days. One load of fat hogs was shipped at the same time the steers were. The remainder of the hogs which were fat were sold to a local buyer. Williams struck a good market; both the cattle and hogs sold well. He found the gain on the steers, from the time they were put on grass the spring previous, to the time of marketing, was close to $1,500. The car load of hogs brought between $1,300 and $1,400. The hogs sold to the local buyer, brought around $400. While Williams was at the stock yards he purchased two cars of three-year-old stock steers to take back with him. He intended to pasture and feed these the same as he had done the ones he had just marketed. In doing this he had the full consent of the man whose farm he rented; for what cattle they had left suitable for feeding purposes were to be put through during the summer.

Williams and the landowner made a reckoning the latter part of the winter to ascertain what their profits were for the year. The gains were satisfactory; but of course were not what they would likely be when the summer-fed stock was counted in. The fall pigs were put on full feed as soon as the alfalfa was about eight inches high that spring. From this time on they were fed nothing but corn and alfalfa. This ration was very satisfactory for hogs of that description; for they already had good bone owing to their balanced winter ration. Williams had the spring crop of pigs come later that second spring. His experience of a year ago had convinced him that in a climate where the weather is changeable it is best not to be in too big a hurry.

The summer-fed steers were kept in a corral where there was lots of shade. There were a few heifers fed also. Following the cattle were what runt hogs that had accumulated on the place. The runts soon began to broaden out and grow; before they had appeared to get smaller every day. The summer-fed cattle and hogs were shipped out in July. The hog market was excellent and a good profit was assured on the bunch Williams shipped. Nothing was lost on the cattle; but no great profits resulted from this bunch. Summer feeding was not as profitable in this case as winter feeding.

With the supply of hogs being renewed every spring and fall, and a large number of calves coming on Williams and the landowner could not help making money. The landowner saw that in the hands of a capable renter who had plenty of help of his own, his profits would be greater than if he had farmed the place himself and had hired indifferent help.

Does Everything Any 4 H. P. Engine Does and Some Work That No Other Engine Can Do



The Farmer's Best Helper—His Wife's as Well!

In and Around Wisconsin

ABOUT five years ago a swarm of bees entered the residence of John Williams southeast of Montfort, coming in through an aperture in the roof. Their presence was not observed until one day Mrs. Williams noticed a little pool of honey on the dining-room floor. It appears the comb became to heavy, had fallen and the honey penetrated the ceiling. Recently men repaired the roof and found three sections between the studding filled with comb and honey to a depth of five feet. They removed enough honey to fill two large wash tubs.

Edward Block, of Watertown, recently shot a gray fox, an animal that has become very rare.

Over 6,000 bushels of potatoes were harvested this fall on the farm of the Milwaukee County Hospital for the Insane at Wauwatosa, the crop averaging 190 bushels to the acre. Six thousand bushels have been stored away for home consumption. In the neighborhood of Harvard, Illinois, the potato yield was low, the average being the lowest experienced in many years. Farmers there have been selling them at 90 cents a bushel, and even then dealers find it difficult to obtain them, the growers holding the product in expectation of even higher prices later on. In northern Wisconsin the yields have been much larger and the prices lower. Joseph Raymond, a Forest county farmer, living near North Crandon, harvested 13,000 bushels of potatoes from 100 acres of land.

The planting of willow trees along highways has been declared a nuisance in Illinois. Highway commissioners are required to destroy all cockleburs, Canada thistles, noxious weeds, and brush growing on or along the roads, and to pay a fine of from $10 to $25 for every season that he neglects to do so. All public roads must have a standard width of forty feet and no bridge or culvert may be built that will not sustain a weight of at least 100 pounds per square foot, the penalty for violation being $200. Any person driving a team, whether his own or the team of another, on public roads, while intoxicated, is subject to a fine of not less than $3 nor more than $25. Road commissioners have the power to go on the lands and premises of any property owner and take gravel or any other material they may need for making roads, after paying or offering to pay reasonable compensation.

That inefficient cream separators cause a big loss to farmers has been demonstrated by F. G. Swoboda, county agricultural representative for Langdale county. The tests were conducted at the creamery of Frieder Brothers, of Antigo, who had become suspicious that their patrons were not getting the proper returns from their milk. The man in charge of their milk route was instructed to get samples from all the farmers along the route who were willing. Nineteen responded. Of this number seven came within the standard set, which was that a separator should not allow more than .03 of 1 per cent of fat to pass into the skim milk, the test varying from .01 to .03, most of the seven samples running at .01 and .015. One sample showed a fat content of .8 per cent. On the basis of a milk yield of 100 pounds per day, this separator at this rate would be losing to the farmer .675 pounds of butter fat or about .8 of a pound of commercial butter. This, at 30 cents per pound, would amount to 24 cents per day, or $7.20 per month, and $5.40 per year, or almost the price of a first-class separator. While this test was by far the poorest made, there were other separators which showed up very unfavorably and each meant a considerable loss to the owner. As the make of the separator used was known in each case, and a number of different makes were represented, it was evident that the high per cent of butter fat in the skim milk was not due to the make of the machine. In a few instances the machines had been used for a number of years and were probably worn out. In the majority of cases it was evident that the separators were in need of adjustment. To determine whether or not a separator is skimming properly samples of skim milk should be taken from time to time and set aside. If after it had been standing but a few hours cream can be seen on the surface it is safe to assume that the machine is not working as it should. Creamery owners are in the most instances very willing to test the skim milk for their patrons.

George Foster, a farm hand employed by Gilbert Neff, residing near Neenah, recently husked 112 bushels of corn in ten working hours, which is declared to be a record accomplishment.

More than sixty car loads, or approximately 45,370 bushels, of apples were shipped out of Reedsburg this year.

L. Aderhold, dairy inspector, has caused the arrest of seventy-seven persons for maintaining unsanitary conditions in cheese factories and creameries, all of which arrests were made during the last six months. The total amount of fines paid was about $1,850.

Near Fond du Lac a black eagle measuring six feet eight inches from tip to tip of its wings and weighing twelve pounds was shot by Peter Thuerwachter.

Farmers in the town of Rockland, Brown county, report the loss of hundreds of turkeys through cholera. One lost about seventy-five out of his flock and another 150.

Shipments of sugar beets on the Chicago and Northwestern line are evidence of the fact that the reduction of the tariff on sugar has not affected the acreage devoted to this crop. Last year only 300 cars were shipped over the Fond du Lac division and this year about 350 car loads will be transported. Most of them are to go to the Menominee plant, but some are shipped to the Madison plant.

W. E. Holland, of Chillicothe, Ill., has purchased 320 acres of unimproved land in the Portage county drainage district, west of Coddington, at $75 an acre, or a total sum of $25,000. Before draining this land was comparatively worthless.

The first train of Canadian cattle shipped since the enactment of the new tariff law passed through the state on October 21st. There were twenty-seven car loads of "duty-free" steers on the train.

Five chestnut trees are growing in Durwards Glen in Caledonia township, Sauk county. They are an exotic in this state and very rare. The trees mentioned produced a good crop of the nuts this year.

The bean crop in the vicinity of Portage has been seriously damaged because of the continual rains. Farmers have experienced great difficulty in harvesting it. On the Samuel Lafler farm, near Wyocena, eighty bushels were secured from fifteen acres and sixty-eight bushels were threshed by Frank Kershaw on a ten-acre tract at the G. P. Pearson farm.

According to the statement of the assessor of incomes in Sauk county there are 68,590 apple trees, 22,852 hogs, 10,385 sheep, 26,594 cows, and 14,897 horses in that county.

Since pumping ceased at the mines in and about Platteville the water level has raised several feet. Wells that were pumped dry several years ago may again show a good depth of water.

Peas, corn, and tomatoes were packed at the Albany factory this year. The output was 4,127 cases of peas, each containing two dozen cans, 761 cases of corn, and 4,897 cases of tomatoes. To the farmers there was paid for peas, $1,597.56; for corn, $192.53; for tomatoes, $2,433.86. The total expenses for the season were $17,821. Next year the acreage will be greatly increased.

Lameness Spavin Festers

go when Sloan's Liniment is used. Try it! Here's what others say:

Unsurpassed for Lameness.

"One of my neighbors owned a $200 mule which had been lame for eight months from a bruised and enlarged knee. I bought this mule for $75 and during a period of about 60 days used $2.75 worth of Sloan's Liniment and stopped the lameness completely."—*Mr. W. M. Birchfield, Pyriton, Ala.*

Killed Spavin

"We have a customer that used Sloan's Liniment on his horse for spavin with such success that the horse now appears as well as ever. We always keep a supply in our shop, as we consider it the best remedy for curbs, splints, abscesses or any enlargement, and we are glad to recommend it to our customers."—*Keane Bros., Boston, Mass.*

Fester Gone.

"I had a horse with his back festered, a place as big as a large hat, and cured it with Sloan's Liniment in a week. The hair is out on it and it looks fine."—*John Morris, Kedaryville, Ind.*

DOGS.

Special Collie Sale

WE have about twenty extra select Collies, all best of breeding and beautiful markings. They are from natural workers, and easily trained. We have a fine line of puppies, and will make special attractive prices on two or more. Write us at once.
A. A. MARTIN & SON, TEKAMAH, NEB.

Scottish Terriers

THE best little rat, watch, pet and stay-at-home dog on earth. From puppies to grown ones for sale. When writing please state just what you want.
S. HARR - - RIVERSIDE, IOWA

SCOTCH Collies. Bright, intelligent workers. Airedale terriers for hunters, watch dogs and companions. Grown stock, puppies for sale at all times. Write for large list. W. R. Watson, Box 125, Oakland, Ia.

NOTICE MEN--- COLLIE and AIREDALE pups let out on shares. Some for sale. Circulars and price lists. No $5.00 ones. P. L. Savage, St. Charles, Illinois.

BRIGHT, intelligent Collie pups from trained stock, pedigrees, eligible to registry in A. K. C. Address Mrs. A. N. Bonnett, Birmingham, Iowa.

SCOTCH Collies—Bred females and young stock from imported and trained parents for sale. Also Airedale Terriers. Sunnyvale Kennels, Cumming, Ia.

SMOOTH FOX TERRIERS Best breeding, splendid individuals, great ratters. Special prices, Address N. R. Rogers, Peru, Nebraska.

PEDIGREED WHITE SCOTCH COLLIES FOR SALE
6 months old. Write C. F. Goodsell, Canby, Minn.

HOUNDS will trail and run until holed or trailed Fox, Wolf, Coon, etc., pedigreed. Sent on ten days' trial. R. F. Johnson, Assumption, Ill.

WYANDOTTES.

White Wyandotte Cockerels
AND COCKS FOR SALE. No brass in plumage, good eyes and legs, from No. 1 layers, $2 to $5 each; 6 for $10, and up. Order at once. Have only a few to spare. **John M. Hall, Williams, Iowa**

R. C. W. Wyandotte cockerels $1 to $1.50 each. Won 1st on cock, 1st on hen, Lincoln, 1913. Price list free. Carl Ehlers, R. 3, Gretna, Nebraska.

PARTRIDGE Wyandottes, 50 fine cockerels and yearlings at prices from $1.50 up. Special prices on a few hens. Thos. L. Morian, Indianola, Iowa.

FAHA'S Silver Wyandottes; great stock reduction sale now on; 200 young Silvers; bargain prices. Write wants. Frank Faha, Jr., Bx.626, Dyersville, Ia.

WHITE WYANDOTTES. Choice pullets and ckls. for sale. Geo. W. Livingston, Monroe, Ia.

SILVER LACED WYANDOTTE COCKERELS from good laying strain, $1.50 each. Address Miss Julia Driscoll, Plainfield, Iowa.

PLYMOUTH ROCKS.

300 GIANT BARRED ROCK COCKERELS 300
THESE will make 12 to 14 lb. ckls. at maturity and excel in nice combs, large, yellow legs and fine barring. Exhibition birds $3 to $5 each. Farm stock 3 for $7, 5 for $11 and 7 for $15. Mention Homestead.
THEO. MARTIN - BELLEVUE, IOWA

W. P. ROCK COCKERELS $1.50 each; W. R. pullets and hens $1.25 each. B. W. Eckels, Nevada, Iowa.

INDIAN Runner ducks, fawn and white, for sale. Prices, $1.50 each. Good, strong and great layers. Address Mrs. W. H. Mann, Malcom, Iowa.

75 Indian Runner Ducks pure fawn and white, fawn heads, $1 each. Mrs. Will Michael, Selma, Iowa.

When writing to advertisers please mention The Homestead.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

LATE POULTRY WORK.

To the Editor of The Homestead:

It is well to have all the necessary late fall work in the poultry yard accomplished early in the season. There are several advantages to be derived from early action, the principal one being that where the work is postponed until the last minute, it is very apt to be overlooked entirely.

Just as the spring months should be a general clean-up time in the poultry yard, so should the fall months be a time of general preparation for the long siege of winter.

The most important thing in fall poultry work is to cull out the flock and retain only those individuals you believe will return you an actual profit. To keep drones in the poultry yard will, in the end, be as disastrous as keeping drones in the bee hive. If you wish your hens to earn revenue for you, you must discard all but the workers in the flock.

There are various methods of judging the fowls in the process of culling the flock, and many devices have been patented for that purpose, but the general farmer who labors under conditions as they are found on the average farm today, will do well to follow what might be designated as the "sight" method; that is, judging the individual by its general appearance, its characteristics and general behavior. Of course, this method is subject to many mistakes on the part of the judge, but it will be found the best to follow under average conditions.

Before one can hope to cull out the flock intelligently under this system it is necessary that he learn the characteristics of a good hen or a good cock.

There is a great difference of opinion among the authorities as to what a good hen and her characteristics really are. It is natural that there should be this difference of opinion, and it isn't a bit more strange to find it true that poultry experts should differ as to their idea of a good hen, any more than it is that a number of horse specialists should differ in their respective ideas of what constitutes a good horse. This very frequently happens and more than likely will continue to happen as long as nature gives men the power of free reasoning.

The general agreement seems to be that a good hen is a healthy one. It is natural to assume this fact. If she were not in the best physical condition it is unreasonable to expect that she will be capable of producing a large number of eggs. The production of eggs is the act of reproducing the species, and it is a well-known fact that this is not done, where the act is under the control of nature, unless the individuals be of the best possible condition. So a good-laying hen must be strong physically.

Then she should be strong constitutionally. This requirement is closely allied with that of good health, but there is a distinction between the two that should be recognized and kept in mind. Many people, especially those who are uninformed, confuse these two requirements often thinking that they represent and stand for the very same thing. But, as a matter of fact, a fowl may be strong physically and weak constitutionally. According to the general meaning of "constitutionally strong," we have come to signify that the specimen is a good breeder and capable of reproducing the species. A hen may be strong physically, but absolutely barren as far as reproducing the species is concerned, and she is therefore not strong constitutionally. This distinction should be kept in mind. Possibly the reason why the two have been confused in the past is because they are usually found together; in fact, as a rule, they are. But we merely mention the exception to explain the distinction between the meaning of the two terms and to show that it is entirely possible that they do not exist in common with each other.

Another characteristic that should always govern in the selection of fowls to make up the flock should be soundness of color. Some people may claim that they do not think soundness of color amounts to so very much when they do not intend to breed exhibition fowls. This is not wholly true as color is a very important element in breeding birds for any purpose, and it is just as easy to keep fowls with strong color in the flock, other things being equal, as it is to have a flock of fowls that have every shade of the proverbial rainbow.

Shape is probably the most important element, outside of physical and constitutional vigor, that enters into the list of characteristics that must be observed in culling the flock. It is shape that makes the breed, and shape should always be closely followed. It is generally agreed by the authorities that a heavy-laying hen has a shape peculiar to her activities along this line.

The Kansas station has claimed that a heavy layer in shape very much resembled the letter "V" from the side view. She should be of great breadth in the regions of the abdomen, and is of a slightly rangy type. This does not mean that she is a fat hen, but the fact that you have a fat or rather heavily-built hen does not mean that she is a poor layer.

Generally speaking, the hen or pullet that is full of life, always on the go, full of health and constitutional vigor, and of a type or shape that signifies that she is capable of producing a large number of eggs, is the hen or pullet to select for your winter flock. In the matter of culling out the pullets, it is generally a good plan to be governed slightly in your selection by picking out those individuals that have been especially fast in developing. The slow growers, the dwarfs, or the runts have no right to belong in the flock. They are the drones and will eat up your revenue. They are the ones to fatten for the holiday markets.

In selecting the cocks and cockerels to keep over for use during the spring breeding season, about the same principles will apply as were used in selecting the hens and pullets. Of course, there are a few exceptions that must be kept in mind.

The cockerel or cock should be selected, where he is intended for general uses on the farm and not to breed show birds, largely for his physical and constitutional vigor. That should be the thing pre-eminent in the selection of the male birds. Then look to size, color, shape, general appearance, etc.

Probably it is of greater importance to cull out the males thoroughly and strictly than it is to cull the females of the flock. A very great damage is done each year by farmers allowing males to run at large with the flock that are physically incapable of making good breeders. The damage caused is in the great number of weaklings that are produced, which, in a generation or two, will weaken the flock to the extent that an entirely new start in blood will be necessary. If this matter is carefully guarded by culling the males closely each fall, it will not enter your flock.

After the flock has been thoroughly culled, the next thing of importance is to provide a place to house them during the winter. If an old house is used, it should be thoroughly cleaned and whitewashed. New straw should be placed on the floor for litter, new nesting material should be provided and things cleaned up generally. It would do no harm to close the house up and burn sulphur inside for a period of ten or twelve hours. This will serve to kill any disease germs that may be present and to give a general sense of cleanliness to the place.

Another important thing that is very often overlooked on the average farm is that of providing proper and ample means of ventilation during the winter. If there are very few windows in the house, more should be cut out of the walls. It should be remembered that we no longer keep hens in houses dark and gloomy, as was the method employed fifteen or twenty years ago, but we keep them under conditions as nearly like those of nature as possible.

It is a very good plan to have nearly the entire south side of the house either in glass or in muslin frames. Far better results will be obtained when this is done and you will be surprised at the end of the year, what your hens accomplished with so little time spent on your part to set them on their feet, so to speak, and give them the proper opportunity to make good.

Chesla Sherlock.

STEPPING UPWARD IN BUILDING POULTRY HOUSES.

To the Editor of The Homestead:

In the past quarter of a century we have built on our farm five poultry houses, besides a number of small buildings for chickens. The first two of these were built after the same plan and were quite simple in their construction, having been put up before we really knew what we wanted and patterned after those in common use in the locality where we had taken up our home. The others which came a number of years later, being, in fact, the product of all we have learned during the twenty-five years, present numerous and important differences, both in appearance and in serviceable features. These have all been built in the past three years, one of them now being in the process of construction.

Without stopping to contrast these various houses, let me very briefly refer to this, the latest of our houses, which we hope to have completed in a few weeks, now. The ground on which this house is situated is not exactly level, sloping gradually toward the west and south, so that we have had to fill in to a depth of two and a half or three feet at the end farthest away from the entrance. In one respect we are favorably situated, although we sometimes do not count it a fortunate circumstance that our land is pretty stony. In time of plowing and harrowing we sometimes wish we had a good many less stones; but they do come in handy in filling in for the new poultry houses. The two houses already built have had a good bottom of small stones, but by skirmishing far and near and picking the land over pretty carefully we have managed to get together stones enough to bring the bottom of the new house up to the sills. These stones we have laid in closely, so that the finer material placed above them might not settle and break the cement surface which will cover the whole when the floor is done. The first house we built I pounded the stones down with a heavy maul, breaking them as fine as I could. This was a good idea, but by taking pains one can place the stones by hand tight enough so that not much of the upper material will find its way through them.

On the top of the stones we put a good layer of coarse gravel. This rattles down through the interstices and helps to make a tight bottom. Then the floor is ready for the surfacing, which is laid of cement, just as we mixed it for the floor of the big barn.

Here I may say that the floor of the first of these last three houses was made of earth and gravel, but while this was an improvement over the old board floor, we would not put down another that way, and we are only waiting an opportune season to lay a cement surface over this. The hens eat up the finer portions of the gravel and the rest gets too unclean. One thing we have learned and that is that the floor of a hen house ought to be smooth enough so that any litter

POULTRY PAPER 44-124 PAGE periodical, up-to-date; tells all you want to know about care and management of poultry for pleasure or profit. **Four** months for **10** cts. **POULTRY ADVOCATE, Dept. 124, Syracuse, New York.**

BRAHMAS.

PURE BRED LIGHT BRAHMA COCKERELS for sale at $1.00 each. They are good ones. Mrs. J. M. Dries. Ashton, Ia.

MY HEAVY WEIGHT, Light Brahmas won 14 premiums at the Iowa State Fair. Frank Johnson, Monroe, Iowa.

or foul stuff on it may be shoveled off and hauled away. Cement makes an ideal floor in this respect.

As we have come along, we have more and more learned the importance of light. Our new houses are all located so that the sunlight may fall through the windows as long in the forepart of the day as possible. If I could have my way, I would build my houses on a pivot so that they could be whirled round as the sun shifts its course in the sky. Perhaps we may some day come to this, or to the fashion of making circular poultry houses, as some do round barns.

One of our later houses we made so that between each pair of windows there was an open space covered with muslin. This lets in some air and light. But not enough of either, as we afterward concluded. So the one which came next and the one we are now building will not show these openings, but will have ventilators running from near the floor up through the roof. We think houses thus ventilated are more free from damp than those with the muslin-covered openings.

We have learned that this is an item of no slight importance, for dampness has cost us more than we probably know in the efficiency of our birds. Hens are quite like human beings in this respect. Anything which lowers their vitality has a direct bearing upon the work they are liable to do. That damp houses do take something away from the health of the flock, by reason of colds and coughs cannot be disputed. In order to add to the freedom from damp, we have been insistent that the floors of our houses should be well up off the ground. A little work hauling stone to fill in with is far less costly than diseases due to dampness.

Gradually we have dropped the wet-feed method of feeding. All our poultry of every age is fed by the hopper system. This not only saves work, but, as we now look at it, at the same time furnishes the birds a variety of feed and in such proportions as they are inclined to use it. Some days more wheat will seem to be required. Other days there will be a run on corn. It depends on the needs of the birds. Does it not seem as if they were after all the best judges as to the nature and quality of the food demanded?

All the rest of the farm buildings having been painted as we have improved them from time to time, we have given the last three houses a coat of paint, too. To make this the more possible we have sided the buildings with novelty siding which takes paint well. The body of the houses is covered with red paint, trimmed with white, so that even the hen houses add something to the handsome appearance of the place. The two little old houses we now use to store the different things we need about the poultry work and for the storage of feed.

We do not claim to have reached the top notch yet in the poultry business, but we have made some progress, and the best part of it all is that we have found it profitable. E. L. Vincent.

ADVANTAGES OF PRIVATE SCORING.

To the Editor of The Homestead:

As the season for the sale of poultry draws near, one's thoughts naturally turn to getting the most possible profit out of the stock. Owing to the high price of eggs and the still higher price of feed the past season the dollar bird has been eliminated from the list of profitable ones, and it is good judgment to put all inferior birds on the market for table use. But the better class, those reserved for breeders for ourselves or to be sold as breeders, are the ones we look to for profit, and it behooves us to get their full value. For the big breeders, those who have bred, exhibited and advertised until they have acquired a reputation, this is an easy matter. But for the small breeder it is a very different proposition, and it is for this class I would urge private scoring, which has many advantages.

First: It sorts the flock.

Second: It shows the breeder in what sections his flock is weak, enabling him to select his breeders for the coming season so as to overcome the defect.

Third: It is a disinterested party's description and valuation of the bird, thereby reducing the responsibility of the selling party to a minimum, and at the same time guaranteeing to the buyer the quality he has a right to expect.

Many a case of dissatisfaction could be avoided by the use of a score card. Many a $5 bird has been sold to the butcher that would have met with ready sale and been profitable to both the buyer and seller, simply because the owner has no proof of the bird's quality and the prospective customer had to be shown. There may be a single bird in your flock on which a score card would increase the value enough to pay for scoring the entire flock.

In conclusion let me say, find out the quality of your stock, then advertise, and you will bless the day you read this article. Poultry Breeder.

PROBABLY APOPLEXY IN FOWLS.

An Iowa subscriber is puzzled as to what is the trouble with his flock of bright, apparently normal, flock of fowls. In his communication he says:

I am a reader of your paper and it would be a favor if this is answered in an early issue. I have about 150 nice looking chickens, they seem to be all right, but they just tumble off the roost dead. What is the trouble and what shall I do for them?

The immediate cause of apoplexy is the rupture of a blood vessel in the brain, causing instantaneous death or paralysis. The cause is invariably attributed to an overly fat condition which is partly correct.

However, the overfat hen is a myth, so long as it is solid muscular fat induced by correct feeding and adequate exercise. An excess of fat coupled with poor condition, meaning fowls that are overfed with the wrong ration, causes weak, flabby fowls that are subject to disease.

The lighter and more nervous breeds are rarely troubled in this manner. If they do, which is sometimes the case, they rarely succumb, unless frightened. The heavier breeds and older fowls frequently succumb from heat or on the nest, and sometimes, as our correspondent states, they drop from the perches dead.

Little or nothing can be done in the way of treatment. Give less carbonaceous feed, more green stuff, and induce exercise.

POULTRY AS WINTER COMES ON.

To the Editor of The Homestead:

From all present appearances there will be pretty good money in poultry keeping for the next few months at least. Prices for both eggs and meat are simply soaring. It is a most favorable outlook from the standpoint of the farmer; and we ought to place ourselves in a position to make the most of it.

For one thing, we might add a few hens to our present flock, provided we have room in the house for them. If the increase must be made at the expense of room, better not try it, but depend on better care of those we can properly house for our surplus eggs.

Again, it is not yet too late to build a new house if we get at it at once. Then we may pick up perhaps a small flock of some neighbor who is about to make a change of residence. There are often opportunities one may learn of by keeping his eyes open. It never pays to do this, however, unless one feels competent to care for the larger flock. Losses often arise from trying to do a business on small experience.

It is a good plan to lay in a good supply of feed now before the higher prices of the later season come on. I have in mind now a farmer who has already stocked his bins well with such feeds as he does not grow himself, anticipating the day of much higher prices. A few dollars saved on feed counts at the end of the season, and is not to be lightly regarded.

I do not suppose any of us will ever be too careful about making our houses as clean as possible. That is advice which has been given so many times that we often pass it by lightly; and yet, there is no more important point in connection with poultry keeping. Hens are by nature very neat creatures. They like to be clean in feather and limb. They do their best at it under all circumstances. We may do much to aid them if we will.

And while we are doing that, what else are we doing? We are making it sure that our birds will lay more eggs and so place more money in our pockets. Cleanliness, therefore, has a real money value. Better housing, better feed, better care and better returns from the eggs and other poultry products sold. E. L. Vincent.

Try The Sure Hatch at My Risk

My Incubator is the Ever-Ready, Ever-Dependable Chick Producer—more reliable than the setting hen, and more profitable. No experience needed. Automatic in operation; requires little attention. Never fails even in freezing weather.

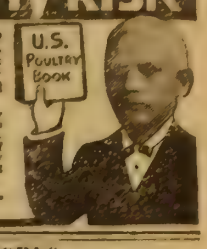
I'll send it to you, freight paid, on 60 days' free trial. Your money back if not satisfied. Get started early to make your profits big. Write today for free illustrated catalog and low prices.

My U. S. Poultry Book is not a catalog, but a book of important facts. Proven by practical demonstration. It isn't for sale at any price. I'm giving it away free to every purchaser of a Sure Hatch Incubator.

FRANK HAMMOND, Pres. Sure Hatch Incubator Co. Box 16, Fremont, Nebraska.



GREEN FEED NECESSARY FOR CHICKENS IN WINTER.

The importance of supplying plenty of green feed to poultry during the late fall and winter is urged by J. G. Halpin, of the College of Agriculture of the University of Wisconsin. Nearly all of the common vegetables are relished by fowls and they should be given rations of beets, cabbage and rutabagas at regular intervals. Mr. Halpin says that silage may be used, provided that only a small quality is fed at first until the hens become thoroughly accustomed to it. Onions should never be included in the ration for laying hens, despite the medical qualities of this vegetable, because fowls fed on them will produce eggs with an undesirable flavor.

When the poultry breeder cannot easily obtain vegetables to feed his flock, alfalfa or clover hay may be substituted, but it should not be thrown into the pen loose, as in this way much of it will be wasted. Packed in a wire pocket or trough, the chickens will eat all of the alfalfa leaves and this system is preferable in that it saves waste and provides the flock with exercise. When feeding clover chaff or chopped clover hay, Mr. Halpin suggests that the poultryman should occasionally fill a pail about three-fourths full of the fine leaves, add boiling water, cover, and allow it to steep for a couple of hours. After mixing it with ground feed, such as bran and corn meal, it can be fed as a crumbly mash with fine results.

POINTERS

—Buff Leghorns are offered for sale by K. Brunia, Pella, Iowa. He will be pleased to furnish descriptions and prices to prospective buyers.

—Mrs. W. S. Huber, Tipton, Iowa, can supply Homestead readers with White Plymouth Rocks from select stock. Her advertisement appears on page 22.

—G. H. Blake, Oelwein, Iowa, advertises White Plymouth Rocks on page 22 and offers cockerels for sale at unusually low price. Write him before buying.

—On page 22 of The Homestead appears the advertisement of Miss Julia Driscoll, Plainfield, Iowa, offering Silver Laced Wyandotte cockerels from a good laying strain for sale.

—Jesse D. Howarth, R. 2, West Grove, Iowa, advertises Single Comb Rhode Island Red cockerels and White Holland turkey toms on this page. The prices named are remarkably low, but are good only for the month of November.

—C. & C. T. Van Lint, Pella, Iowa, announce on page 22 that they have fifty Rouen ducks for sale. These ducks were first and second prize winners at the late Iowa State Fair. They have also for sale Silver Campine cockerels from the best imported stock at $1.50 each.

—Carl Ehlers, R. 3, Gretna, Neb., advertises Rose Comb White Wyandotte cockerels at low prices on page 22. Mr. Ehlers' flock won numerous prizes at the Nebraska State Fair this year. At the price named these birds will not remain long unsold. Buyers should forward their orders immediately.

—In an advertisement on this page L. G. Housholder announces that he is prepared to score poultry at reasonable prices. There is no doubt that the scoring of a flock of poultry is to advantage of the owner, as well as to his patrons. Mr. Housholder has had thirty years' experience, does his work in a satisfactory manner and at a reasonable cost. Address inquiries to L. G. Housholder, Bonaparte, Iowa.

—Theodore Martin, Bellevue, Iowa, is advertising Barred Rock cockerels at very reasonable prices on page 22. Mr. Martin states that they will make twelve to fourteen-pound cocks at maturity, are nicely marked and are worth more money than the price he is asking. Mr. Martin has been advertising in The Homestead for many years and we have yet to hear of a single complaint from any of his customers. You can feel safe in sending him your order and rest assured that you will get your money's worth. When writing kindly mention The Homestead.

LEGHORNS.

ROSE COMB BROWN LEGHORN COCKERELS
At the Pike Timber Stock Farm
DAVENPORT & MACK, BELMOND, IOWA

BIG BARGAINS in R. C. Brown Leghorn hens and cockerels; also in Fawn and White I. R. ducks and drakes scored and unscored. Also a few White I. R. drakes of the Fischel strain. Write your wants. Mrs. G. W. Brockway, Clarksville, Iowa.

BARGAINS in all varieties Wyandottes, Orpingtons, Minorcas, Reds, Rocks, ducks, geese, turkeys. Progressive Poultry Farm, Bx. 10, Hampton, Ia.

Galloway's 1914 Advance Announcement

Extraordinary

Listen! I personally want you to read this announcement.

I have something to tell you.

Real News. News that means a lot to you personally and all of your neighbors.

Why?

Simply because there is no man in the United States today who tills the soil whether he is a land owner or a renter who can help but be personally and vitally interested in this announcement.

It tells the real facts about the great **Galloway Direct from Factory Manufacturing Business.**

Yes, sir, I want you to read every word of this announcement so you will know better what we have done here at Waterloo for the **Farmers of America** and why we have done it.

You have no doubt read about how this business started. About how I left the farm twelve years ago and started to work for an implement dealer; then later on went out on the road as a salesman and found out by this experience the real cost of goods, the cost of selling and the real trade conditions and then later on started in with a small factory selling goods direct to the farm. I have been adding department after department, line after line, until today we have the ***Largest Institution*** of **Its Kind** in the **World** that makes its own goods and sells them direct from factory to farm.

A little over seven years ago this business started having only a comparatively small trade. Today we have wound up the most wonderful year in our history with a business of over twelve times that of six years ago.

What has brought about this tremendous volume of sales of **Galloway Made Machines?**

I will give you the answer briefly and in a few words.

Just three things.

HIGH QUALITY GOODS,
LOWEST POSSIBLE PRICES AND
A TREMENDOUS VOLUME.

No business could expand like this business has without these three things.

It's a fact that we are turning out goods here in our big factories at Waterloo such as gasoline engines, manure spreaders and cream separators and selling them direct to the consumer at less money than the average dealer can buy similar goods at in solid car-load lots for spot cash.

It's a fact that on account of our tremendous volume we are selling much of our merchandise and machinery to the consumer for less money than some factories can turn them out at first shop cost.

So great has been the demand for Galloway goods that many of our customers asked us to install other lines. The result is that we put in a large and complete line of farm machinery, also a big line of general merchandise, such as clothing, furniture, carpets, rugs, stoves, watches, dishes, etc., on which we can save you 30 to 50 per cent.

Better Goods at Lower Prices

That has always been my policy. On the goods we sell I challenge all competition both in quality and price. No one can meet us on quality and price today.

Why?

Because of our economical operating expense.

Because of our tremendous factory volume.

All Galloway machines are made in enormous quantities with all operations standardized. We have the finest automatic machinery, the best labor conditions. Everything that goes to reducing cost of production. Then on my **Direct** from **Factory** to **Farm Plan** we sell every Galloway made machine direct to you with only one small profit added to the actual cost of materials and labor.

That's what I mean when I say "Galloway Divides the Melon With His Farmer Friends and Customers."

The share that ordinarily goes into the pockets of a lot of middlemen you can keep and put right back in your own pocket.

If every man who reads this advertisement really knew the actual truth and facts about the wholesale prices we give they would buy only Galloway Merchandise and Galloway Made Machines.

I just want you to study carefully the picture at the top of this page.

They are the fellows who do things around the Galloway Plant.

You know the old saying still holds good, **"Two heads are better than one."**

In the Galloway business the men you see at the top of this page work together like so many teams of horses. They get together with me, take out their pencils and we figure out what we are going to do for the coming year. **Then spread the news to everybody.**

Our goods, our prices and the great satisfied public that has bought from us all over the United States, Canada and thirty-two different foreign countries do the rest.

Here Is What We Are Going To Do For 1914

Make still more goods, make a still lower price and this means we will do a bigger business than ever before in our history.

Our new low prices are based on a larger volume than ever before. We will have to make and sell three machines where we formerly made and sold one on account of the still lower price that we are making today.

When we passed the million dollar mark we thought we did something big, but we have now passed the two million dollar mark and on the way to bigger and better things for 1914.

My catalogs which I will gladly send you any time on request will quote you the lowest prices that we have ever made to the **Buying Public of America** and never before has the quality of our goods been better because our manufacturing facilities have been better. We have refined and perfected all the little details and best of all are now in position to give you quicker and better service in the way of prompt shipments than ever before.

Every man at the head of every department in the Galloway institution is a live one. He is wide awake and knows the policy of this institution from A to Z. If there is a customer who is dissatisfied or who has had any trouble at any time with a purchase made from us, it is because he has not given us a chance to make it good. We will not knowingly have a dissatisfied customer.

Here Is Our Policy

No matter what you buy from us, we want you to try it, test it, compare it with anything else in its class and if for any reason whatever the article does not suit you in every way after you have given it a fair trial, we agree to take it back, pay freight both ways and give you back your money.

We leave it up to you to decide whether or not Galloway goods have merit and whether or not they are what you want.

Remember every article we sell is guaranteed and backed by a $25,000 legal bond assuring you the return of your money any time if the goods do not please you.

This bond is not necessary as far as we are concerned, but we simply put it up so that even the most skeptical cannot help but feel they are taking no chance whatever in buying Galloway goods.

I can save you money on every article we sell—real money—money that you can put back in your pocket—money that will buy you pleasures—money that will pay your rent, your mortgage or help you to make a bigger profit at the end of the year.

There are two ways of making money on the farm.

One is Selling Right—the Other is Buying Right.

You know and I know that whenever you sell grain, corn or live stock you always try to get the best possible price. You are looking for the top notch market figure.

Why not BUY the same way?

If you can save $50, $30, $20 or even $10 on every $100 purchase you make that is the thing to do, because this saving is just as good in buying as the extra price is in selling. Because money saved in buying means just as much as money earned in selling.

Yes, sir, I can save every farmer of this country hundreds of dollars on his annual purchases and shrewd business farmers everywhere are taking advantage of my liberal offers and many of them making big money every year in their purchases.

Over 135,000 Satisfied Galloway Customers

That is the real proof.

The men who have bought and used and still continue to buy and use **Galloway Made Machines** and every year make more friends for the **Galloway Way** are the real proof that my **Direct** from **Factory Plan** is a **Success.**

Now you know my policy.

I know you are going to need something listed in the Big Galloway General Merchandise Book inside the next few weeks.

Send for my catalogs. Get my big general Merchandise 120-page book for anything you want in clothing, furniture, stoves, household supplies, watches, etc.

Write me for my gasoline engine catalog, manure spreader catalog or cream separator catalog if you are interested in buying any of these three money-making machines.

We will do our best not only to save you money on the first cost alone, but to help you make your machines give you the best possible service.

Come to Waterloo and See Us

Visit our offices and factories if you can and see for yourself how Galloway machines are made.

The Galloway Plant is something different, something original, highly educational and of personal and vital interest to you and every farmer in America who wants to know the facts about why and how Galloway makes the goods, makes the price and still maintains the very highest quality.

If every farmer in the United States really knew the truth and the facts about the values I give, in spite of our already tremendous volume, we would have to increase our factory capacity at least 10 to 15 times in order to supply the demand.

Now, I have given you the latest news in a nutshell about our Prices, Products and Plans for 1914.

Let's make this the starting point in our getting acquainted.

Don't believe all your dealers or our competitors may say about us. Find out for yourself.

The first step in getting acquainted is writing for my catalogs, which are my only salesmen, the best and cheapest salesmen on earth. A one-cent postal will bring them. Write me today.

Your friend at Waterloo,

Wm. Galloway, Pres., WILLIAM GALLOWAY COMPANY

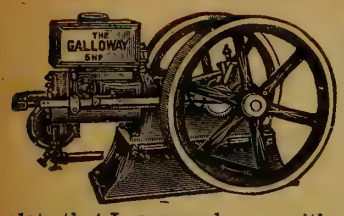
17-D Galloway Station - - - - - - - - - WATERLOO, IOWA

The Largest Manufacturing Concern in the World Selling Its Entire Output Direct From Factory to Farm

Yes, sir, my big factories, my big organization, are all working at top-notch pressure—almost at the bursting point—turning out Galloway-Made Machines to make possible my 1914 plan of more goods and lower prices. My big 1914 campaign is right at red heat. We are going to do bigger and better things for the Farmers of America than ever before. My famous slogan—"Galloway Divides the Melon with His Farmer Friends"—is going to be heard by more people in every section of the country and thousands are going to benefit by my new campaign. It's going to be chuck full of surprises—surprises in the way of better-than-ever machines—still lower prices and special offers never before made you by any manufacturer. You may have been holding back—hesitating for some reason or other, about trying my direct-from-factory plan. You can't afford to hesitate any longer. It means money in your pocket, more money than you may realize, to get acquainted with my direct way of doing business.

It means right at the start that you save all jobbers', dealers' and agents' profits, salesmen's expenses, bad dealer debts and many other necessary charges that you have to pay when you buy on that round-about method. My plan not only enables you to save money on gasoline engines, cream separators, manure spreaders, and a complete line of farm machinery—but it includes today many articles for the farm, home and family. Such lines as clothing, furniture, stoves, watches, etc., on which I can save you from 20 to 50 per cent. Just write me today. Get my catalog. That's the first step toward getting better acquainted. Just mail me a postal for my big complete catalog.

I'll Save You $50.00 to $ 300.00 on Gasoline Engines



That's a lot of money—$50 to $300—to save you on the price of one of my engines, but I'll do it, **positively.** As proof of my claim—I will sell you my 5 h. p. stationary engine complete ready to start—at only $99.50. Dealers are asking from $225 to $300 for inferior engines of same capacity. Prices on my other styles and sizes to match. Remember, my line of engines is especially designed for farm work. They are built in sizes of 1¾ h. p. up to 15 h. p. and can be had mounted on hand or horse portable trucks—equipped with wood sawing attachment, or stationary. Then my line is so complete that I can supply you with many of the machines such as grinders, shellers, washing machines, cream separators, etc.—which you may want for running by power. I will quote you special low combination prices on such outfits. Prices that you can't equal anywhere else. All Galloway engines are sold on 30 days' **Free Trial** backed by a strong 5 year warranty on materials and $25,000 legal bond, and best of all, my engines have stood the acid test of actual use on the farms of over 30,000 Galloway engine owners. You simply can't take any risk on my plan. Now, I am making some new, low, 1914 advance prices on my complete engine line. You will simply be amazed at my low prices and the high quality of my engines. Let me give you all the facts. Just write me for my big 60-page illustrated engine catalog. A one cent postal will fetch it right to your mail box.

Free Service Department. My force of engine experts are at your command and absolutely without charge. They will tell you how to select pulleys, line shafting and the engine that is best suited for your work. How to test and judge an engine,—how to use your engine to best advantage, how to fit up a power house, etc. This is service that costs you nothing but will save you many dollars. Get my catalog. Get acquainted with my direct-from-factory, money saving plan.

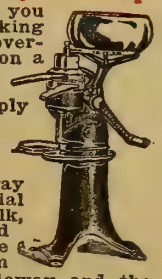
WRITE FOR MY MONEY SAVING CATALOGS

I want one or all of my catalogs in your home. Every farm home should have a set of Galloway Bargain Catalogs, so in case you want something in a hurry you can just refer to my bargain books and save time and money in ordering. I'm selling direct every article of merchandise listed in my catalogs. Yes, sir, right direct to your farm at lowest possible prices—money-saving prices. I cut off the useless profits and unnecessary expenses you have to pay when you buy through middlemen—and give you a better guaranteed and better quality article. Every article I sell—whether gasoline engines, manure spreaders, cream separators, washing machines, clothing, furniture or other merchandise, I give you a positive money-back free-trial privilege. And I also make you more liberal terms than you can get from your dealer or agents or any catalog house. The first step in your getting acquainted with my direct-from-factory plan of selling is getting my catalogs. My catalogs are my only salesmen and they cost only about one-third the price of a salesman's ten-cent cigar to put them in your mail box. They are the cheapest and best salesmen on earth. They are in over a million farm homes today. You should have them in your home, for they will save you big money on your next year's purchases. Write for them today.

MANURE SPREADER PRICES SLASHED $64.75 up

My advance 1914 prices are cut clear to the bone. I am out after a bigger spreader business than ever before in the history of this business and I am making prices that will get it. Yes, sir, I've cut my prices but not the quality of my famous Galloway line of spreaders. They are better than ever before—and my line is now complete ith nine different styles and sizes. My new low-down, semi-underslung spreader is the latest, the very best type of low-down spreader on the market. Two horse pull—large capacity, light draft—with all the old, tried out, and proven Galloway features of construction. Not an experiment but a wonderful success. Now, just compare my prices. Only $64.75 for my complete OA-50 bushel spreader—or $76.50 for my IA-60 bushel spreader. My famous No. 5-70 bushel spreader with all steel, detachable trucks sells for only $79.50. The greatest spreader value in history. My attachment spreaders, the only successful wagon box spreaders made, sell for only $39.50 and up. I know my spreaders will give you the best satisfaction. Over 40,000 in use today. All sold on 30 days' trial on most liberal terms ever made. Get my new spreader catalog—just out—and my famous "Streak of Gold" Book—Free. Write me today for my new, low prices and catalogs.

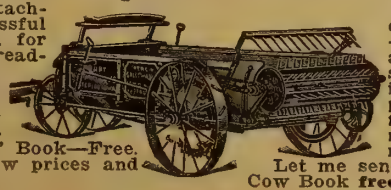
THE NEW GALLOWAY SANITARY SEPARATOR $42.50 up



If you have more than three cows you should have this separator and I'm making my offer so easy you can't afford to overlook it. I save you from $35 to $50 on a cream separator and give you a better machine than you can get anywhere else. My factory-to-farm price simply can't be beat, that's all.

I'm not going to take space here to make a lot of claims. I'm simply going to make a fair, square offer that PROVES the quality of the new Galloway Sanitary. You get my separator on trial and make this test: Take a pan of milk, put half in an ordinary separator and half in the Galloway. When both have done their work put the skim milk from the ordinary separator into the Galloway and the skim milk from the Galloway into the ordinary separator. **Then watch the cream spouts.**

This test will prove to you that the Galloway gets you more cream per gallon than any other separator.



Disc type bowl, the best type ever designed. Oval milk tank, oval frame—no crevices for milk to gather in and putrify. The most sanitary cream separator ever made. Gearing all set in single gearing case same as high priced automobiles. Oil-bath, splash feed lubricating system. The easiest machine to clean and the easiest and most economical to operate.

Let me send you a copy of my Galloway Dairy Cow Book **free.** Most complete practical manual of dairying ever published. No matter how much money you're making you can make more after reading this book. Regular price, $1.25. I send it free. Write me today for my new catalog and low prices.

GET MY NEW GENERAL MERCHANDISE CATALOG TODAY

It's just off the press. The latest prices, the latest styles of everything. Chuck full of bargains for your home. Money saving prices on clothing, furniture, rugs, carpets, watches, stoves, machinery—in fact, the complete Galloway Line of Merchandise is shown in my big General Merchandise book. I want to put this book of bargains in your home—right now. Just write me a postal or letter and I will mail you a copy right direct to your mail box, postage prepaid.

Save From 20 to 50 Per Cent On Everything You Buy

You'll be convinced when you look through my Big Book of Bargains that Galloway does just as he says he will do—"divides the melon with you." Try my plan once—and you will be a Galloway booster always. You will see that my plan pays best—You'll be tired of "dividing the melon" with the big trusts and middlemen and paying four or five unnecessary profits on the things you buy. I have a copy of my catalog for you. I want to put one in every farm home in the country—so just write for a free copy today. Do it now.

Get My Special Co-operative Profit Sharing Offer

I've got a brand new offer that will help you get a gasoline engine, cream separator or manure spreader partly or entirely without cost to you in the end. I will explain my offer to you in detail when you write me for my catalogs. You can accept it or not as you please. If you do accept it, you will get an added benefit that no other manufacturer ever before made you. It's just another way I have worked out to help the men on the farm benefit by buying right direct from me at my low, direct-from-factory, money-saving prices.

Now, write me for my catalogs—any or all the catalogs you are interested in and get my new low prices and special offer. Don't wait. Write me this time without fail. You want to know what Galloway has to offer you. My catalogs will show you and you don't put yourself under any obligation whatever. Send for them today. Do it before you lay this paper down. Address,

Wm. Galloway, President, WILLIAM GALLOWAY COMPANY, 17-D Galloway Sta. WATERLOO, IOWA

Do Your Own Butchering This Fall—It Will Pay

Good, pure, well-seasoned country sausage—city people are just crazy to get more of it. Instead of shipping all your hogs on the hoof, do your own butchering and get retail prices for the meat. Sausage is easy to make, and there is no danger of spoiling when you use an

ENTERPRISE

Sausage Stuffer and Lard Press

Cylinder Bored True

with the patented corrugated spout. Makes sausage that keeps because it stuffs casings free from air bubbles—the only machine that fills casings perfectly. You will find it a great convenience to own an Enterprise Meat AND Food Chopper—a machine especially made for chopping meat. Chopping is done by knives—an exclusive Enterprise device. **Insist on your dealer showing you these machines.** Their advantages are so great you cannot afford to be put off with substitutes. Say "Enterprise," and insist upon it.

No Bolts to Loosen--No Stove Putty to Crumble.

The Arcadian Malleable Range is built of tough, malleable iron and charcoal iron plates. Its joints are riveted together instead of being merely bolted together, and the seams are not stuffed with stove putty like ordinary so-called steel and cast iron ranges.

The Arcadian is built exactly like a locomotive boiler—no bolts to loosen, no stove putty to crumble and let in false drafts to fan the fire when you want to shut it off, or deaden the fire when you want it to burn. *The ARCADIAN cuts down your fuel bill at least a third.* No blackening needed—just wipe off with oily rag—stays a perfect baker because it stays airtight for a lifetime—has oven thermometer and all work-saving features.

Arcadian Malleable Range Co. Dept. 39 Milwaukee, Wis.

ARCADIAN
Malleable Non-breakable
RANGE

FREE BOOK—Write for interesting free booklet telling inside facts about range building. Shows how to pick out the weak points in poor ranges. The facts in this free book will save you money. Write for it today.

Shetland Pony Given Away

Here is your chance to get a fine Shetland Pony. Cut this picture into six pieces and paste or pin the pieces together so as to make a complete picture of a boy riding a pony. LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Rural Route No. 56, Box 21, Philo, Illinois.

WITH THE EDITOR.

Several letters have been received, asking for information about starting a club. One letter especially appeals to me. In substance it says:

In our neighborhood there has never been a farm women's club. We would like to organize, but do not know how to go about it. I have often wished there was a club, where we might have a social visit with neighbors and keep out of the mental rut. One gets into the habit of staying at home, and thus the rut gets deeper and deeper. Therefore I hailed with delight the motion to start a club and come to you for advice.

It is a privilege to be of some help, and especially to one of our sister farm women, with a houseful of babies to care for. Mothers spend the best years of their lives rearing their families, and they, of all people, need the stimulus of new ideas, and the broader outlook that comes with associating with other people.

As the women of this neighborhood are wholly inexperienced in organizing a club, the better way would be to start informally. Invite the women of your neighborhood to your house, on a certain afternoon, ask them to bring their sewing, preferably some light work. Serve light refreshments; nothing rests a weary housekeeper so much as the refreshments that she had no part in preparing.

Before separating decide to meet at some other home the next week, or the next month, the time depending on the wishes of the majority. At the next meeting choose a president, either by acclamation or ballot. Also a secretary-treasurer, whose duty it is to read the report of the last meeting, and take care of the money, when the club arrives at the dignity of a treasury. After the report of the previous meeting, the secretary should call the roll, in answer to which the members should respond with something which will be a benefit to the others. It may be an article from a magazine, or some particular way of doing things, which she has learned through experience. This may be extended to many subjects, and is sure to arouse enthusiasm.

When well started the club may assume a more businesslike form. It would be well to get a book on parliamentary law, and study it at the meetings. Little by little the club will advance as a whole, and be all the better because of the informal start.

From just such a beginning our home club in a dozen years, has a membership of fifty, whose respective dues are fifty cents a year. We have monthly meetings, and get out a year book, which contains a printed program for each meeting. There is an annual banquet, at which each member is privileged to bring one guest, and a picnic, to which the whole family is invited. The picnic dinner is served cafeteria style, and we surely do have good times.

Dear friends, if you are tired of the old way just start a club. You will be surprised at the different views it will give you, and how soon you will forget to be frightened at the sound of your own voice.

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

The day becomes more solemn and serene
When noon is past—there is a harmony
In autumn, and a luster in the sky,
Which through the summer is not seen nor heard.

Sow an act and you reap a habit;
Sow a habit and you reap a character;
Sow a character and you reap a destiny.

If you have gracious words to say,
Oh, give them to our hearts today,
But if your words will cause us sorrow,
Pray keep them till the last tomorrow.

I am bigger than anything that can happen to me. All these things, sorrow, misfortune and suffering, are outside my door. I am in the house and I have the key.

FOR THE COOK.

Meats That Are Left Over.—Grind meat that has been left over from a previous meal; mutton, veal, beef or pork; butter a baking dish, sprinkle with bread or cracker crumbs; alternate with a layer of meat and a layer of crumbs, until all are used. Moisten with broth or gravy from the meat, or milk. Dot with butter, and bake. Mashed potatoes, instead of crumbs, gives a substantial dish, which provides a large part of the meal. Bits of left-over ham, finely chopped, and added to pancakes, omelette, warmed over potatoes, either creamed or fried, disposes of the meat and adds a fine flavor.

Stale Bread.—A stale loaf of bread, even if quite dry can be used, by cutting the top off and scooping out the inside of the loaf, and filling the shell with meat prepared as for the above. Secure the top with toothpicks, dampen, and heat in a quick oven. Serve with a gravy, or cream sauce.

Left Over Fruits.—Butter a baking dish and place a layer of bread crumbs, or bread and butter in the bottom. A layer of fruit (one or the remnant of several kinds) more crumbs, and continue until all are used, having the top layer of crumbs, which should be well buttered and sugared. Pour fruit juices over all, and bake, or steam. You will be surprised how toothsome it is, and the cost is little or nothing.

Pudding From Left Overs.—A pint of flour, two teaspoons baking powder, one teaspoon shortening; mix rather stiff with milk or water. Butter glasses or cups, and place a teaspoonful of the dough in the bottom, then an equal amount of fruit, bits of jelly or preserved fruit. Continue until all are used and place in a steamer twenty minutes. Serve with liquid sauce or cream and sugar.

Left Over Cereals.—Any kind of cereals can be used in puddings in the place of bread, or when cold may be dipped into bread crumbs or flour and fried.

For the Soup Kettle.—Place in a kettle anything left over from any meal; add water and simmer slowly for some time, adding enough beef extract to season. Strain and add salt and pepper, and you have a splendid soup, which may be eaten with crackers, or bits of broken bread toasted. Even soup bones cost money, and soup made from left overs is pure gain.

Last End of the Garden.—One gallon chopped cabbage, one-half gallon green tomatoes, one pint lima beans, boiled, one quart small onions, one gallon string beans cut up and boiled, one hundred very small cucumbers, one dozen sweet peppers, one and one-half ounces black pepper, whole grains, one quart cider vinegar, one-half pound ground mustard, one pint salt. Scald vinegar; stir the mustard in cold vinegar until the consistency of cream, then add to the hot vinegar. Add sugar, salt, pepper and the vegetables well mixed and cook one hour. Serve with meat.

AMONG OURSELVES.

We especially welcome inquiries and suggestions relative to school matters. E. L. Wulff, Iowa, desires a new plan for a social. In a letter which has just reached my desk, he says:

We are to give a program at our school soon, and wish to serve refreshments. We have given so many box socials and pie socials that we desire a change. I have come to "Among Ourselves" for suggestions. The proceeds are to go to the school.

Let's have a school talk in the near future. Suggestions for socials, plans to make the schoolroom a more comfortable place for our children to stay, the books suitable for a school library, and plans for Christmas entertainments. No school is too small to give some kind of program relative to the day. The country schools, many of them, have only a very small attendance. This, however, will not discourage the hustling, up-to-date teacher. Letters are desired, not only from interested parents, but from teachers and pupils as well. Do not hesitate; there is small danger of sending too many letters on this, one of the most important of all subjects.

As a complement to the editorial theme "E. S." gives a talk on a home appliance to lighten labor. It is much gratification to know that the good things of our club enter into many homes:

A year ago last spring I purchased a vacuum cleaner, a "sweeper-vac," that has been very satisfactory. It takes all the dirt out of carpets without beating them, and they can be cleaned on the floor. I was just recovering from a siege in the hospital, so you can, I think, understand the help it was to me when I tell you that I was not able to use a broom. The one I have does not take up ravel-

ings, and large litter, but it is now made with carpet-sweeper attached, and would, I think, be about perfection. I am hoping this will help Mrs. Lowater and others.

Speaking from experience, I sanction every word "E. S." says. And if one is unable to buy a cleaner it is better and cheaper, in the end, to hire some one who owns a cleaner to clean rugs and carpets twice a year. Many paper-hangers and painters keep one for the purpose. Aside from the saving of strength, which is the main consideration, the saving of the floor coverings is money saved in the end. Who else has a strength saver? We would be glad to use a subject of this kind every issue.

After talking about so many practical subjects our members will, I am sure, enjoy hearing our Mrs. Soesbe, who always brings us something outside of the four walls to think about. This valued member gives food for thought that, if applied, will help us over many otherwise dark days this winter:

Every season has its own peculiar advantages. One thing that should reconcile us to the winter is the fact that it gives us the long evenings, with time for our book friends again. One of the most pleasant privileges of the mother is that of reading or telling stories to the little ones, or directing the reading of the older children. Mrs. Lowater gave us some fine suggestions on reading for young people, and I wish to tell you of a few books that I have found to be good to read to small children. As soon as the child asks for a story, we have the opportunity to begin to cultivate his taste for good literature. As a rule, I care very little for fairy stories, unless they teach some good lesson, such as obedience or kindness. Biography I think very good, and from the lives of our great men we can teach many lessons; also many facts which form a connecting link with history. "Fifty Famous Stories Retold," "Stories of Great Americans," "Discoverers and Explorers," "Life of Lincoln" and "The Century Book of Great Americans" are among the books of this character. Children are also interested in other children, and you can teach geography while telling them about children of other lands. One especially interesting book is "Children of the Arctic," by the "Snow Baby" and her mother. The "Snow Baby" is Marie Peary, who tells of her trip to Arctic regions. The story of "Hiawatha's Childhood" will interest your children in the Indian children and also give them an acquaintance with one of our American classics. Another class of stories that are very good are the animal stories such as we find in Kipling's "Jungle Book" and the Thompson-Seton books. As the stories are rather long you may have to tell them at first, and later they understand them when read. Sometimes our children surprise us by enjoying things we would suppose too old for them. Our six-year-old boy listened with much interest to "The Man Without a Country" by Hale. That best of all books, the Bible, must not be neglected. There are many good books of Bible stories. I have found the "Beginner's Stories" in our graded Sunday-school lessons to be very good. Our children should be taught to love poetry too. I agree with Mrs. Lowater that children like poetry of action best. I hope other mothers will join in this discussion, and tell us what books their children enjoy. I am sure we all wish to make our meetings helpful this winter.

We thank Mrs. Soesbe again and again for giving of her time, her experience and her splendid mentality. If you do not file the copies do, I beg of you, preserve this one. Sure as you live, mothers, you will sooner or later need this very information.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

4th Quar. Lesson 6. Rom. 14:7-21. Nov. 9. 1913.

ABSTINENCE FOR THE SAKE OF OTHERS.

As in a mirror, in the Epistle to the Romans we see a faithful reflection of one apostolic church. The sight is disappointing. Where is the unity of the spirit? The church is rent. The converts from Judaism, taught from childhood to consider the prohibitions of the ceremonial law as of divine origin, deem them still obligatory. They observe them with scrupulosity. They look upon those who do not obey them as no Christians. They are censorious. On the other hand, the Gentile converts, never having been in bondage to the ceremonial law, knowing nothing of its arbitrary distinctions as to days, weeks, etc., were inclined to resent any attempt to rivet the Mosaic ritual upon them, and to look with contempt upon their brethren, who wore these fetters so complacently. Doctrinally, the purpose of the Epistle to the Romans is to show that Christianity is the legitimate fruitage of Judaism; that there is as little room for strife between Christianity and Judaism as between the fruit and the blossom. It is the blossom's destiny to fade and fall, that the fruit may come to perfection. A fight for Judaism is a fight for a blossom. Practically, Paul's purpose in writing is to outline those principles which will most surely conduce to peace. This is the first, and as yet unsurpassed, essay in Irenical Theology. Paul unequivocably asserts that what might be called the liberal party is in the right. He enrolls himself with it when he says, "We, then, that are strong." But he proceeds to give certain maxims adapted to immediate use. First, as the tenets of the Judaic-Christian faction relate to matters comparatively indifferent. They are to be received with cordial fellowship. Again, the censorious disposition is to be steadily repressed. There is only one Judge of the conscience. But if anybody is bent on judging, let him turn his judicial spirit upon himself and see that he does not grieve his brother by a selfish use of his liberty of conscience. It is possible in this way to cause the apostasy of a novice in religion, and thus undo the work of God in his regeneration. If one believes himself free in these indifferent matters, let him keep it to himself. Parading his advanced opinions may injure his brother. The use of liberty is right, but there is a manner of using it which brings condemnation.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Rural Route, No. 56, Box 21, Philo, Illinois.

A TRUE STORY.

(First Prize.)

It was a fine autumn day, and the sun was just going down behind the trees. My dog and I were walking along the road, going after the cows. There were trees along the side of the road, and the birds were flying from one tree to another. Then I heard a shrill cry in the woods, which sounded like a wild animal that was frightened. My dog ran as fast as he could to where the cry was heard. Pretty soon a rabbit ran out of the bushes as fast as he could. I ran to pick him up, and my dog ran all over the woods barking; I think a fox had been after the rabbit, but I did not get a chance to see him. I took the rabbit home and in a half hour he was all right. I turned him loose, and he ran as fast as he could. I hope nothing else frightened him.

—Willie Helmstaden.

About Wheat.

(Second Prize.)

First we plow the ground, then we drag it until it is very fine. Then we sow the wheat and drag it again. Then we roll it. When it rained the wheat came up, and some thistles came up too. We hoed the thistles out. When the wheat got ripe we cut and shocked it, and let it stand until it became dry. After it was dry we hauled it to the barn. Then the threshing machine came and threshed it. My father takes the wheat to the mill, where it is ground. After father brings the flour home mother makes it into bread, and it is ready to eat.

—Elna Prange.

A Little Cake Baker.

(Third Prize.)

I live in the country, and go to the country school. I help my mother do many things, and can bake nice cakes. I have twenty-eight chickens of my own. If I raise them I am going to sell them and buy myself a coat and hat. I help father milk, too. This is a good candy recipe: One cup molasses, one cup sugar, one very small piece of alum, one pinch of soda. Flavor with vanilla.

—Hazel Walker.

Prof. G. F. Warren, of Cornell University, says the soiling system is out of date on New York farms. Ensilage furnishes the best green feed. Pasture, corn, silage, hay and grain make the best feed combination for dairy cows.

We Have Given Ideas for 30,000 Home Parties and Church Socials in Three Years

For girls at home who wanted to entertain their set: for young people's church societies: for ladies' aids: for women in frontier towns who wanted to entertain women who "never had a party in their lives": for women in the great cities who had run out of ideas and wanted new ones for luncheons and teas: for the minister's wife who wanted to raise money for the church—for everybody, in fact, young and old, in city and country.

And we have given ideas for these thousands of happy-time occasions without a penny's charge.

It is part of the personal service that has been building for twenty years back of *The Ladies' Home Journal*, and every subscriber or reader is entitled to the service without a penny's cost. An editor with two or three assistants does practically nothing else but travel, buy, and collect the newest ideas for all kinds of good times, and pass them on.

It is worth knowing about. A booklet, entitled "The Story of 600,000 Invisible Hands," tells something about this service. A postal-card request will bring a copy.

A year's subscription to *The Ladies' Home Journal*, by mail, costs $1.50, or it may be bought from any Newsdealer or Boy Agent at 15 cents a copy.

THE CURTIS PUBLISHING COMPANY
INDEPENDENCE SQUARE
PHILADELPHIA, PENNSYLVANIA

HERE is a chance to learn how "the other fellow" is improving the flavor of his butter and cured meats.

These books will tell you. They are free:

"Butter Making on the Farm"
written by a practical dairyman.

"Curing Meats on the Farm"
describing up-to-date methods.

The makers of the tastiest butter find that sweet flavor is best brought out by using Worcester Salt. Its fine, even crystals work in smoothly—and dissolve instantly.

Successful meat packers use only Worcester Salt. It gives the cleanest and most salty brine—free from sediment or scum.

In the home, too, the absolute purity of Worcester Salt will appeal to the housewife who desires her cooking to be savory and tasty.

Either or both the books sent free on request.

WORCESTER SALT

The Salt with the Savor

For farm and dairy use, Worcester Salt is put up in 14-pound muslin bags, and in 28 and 56-pound Irish linen bags. Good grocers everywhere sell Worcester Salt. Get a bag.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6092 Girls' Dress.—A good-looking type of dress for the small girl is here presented. The frock closes at the front and has three-gored skirt. The collar, which is a pretty feature, may be round or square. A sash belt holds the blouse in position. Woolen goods or wash materials may be used.

The pattern 6092, is cut in sizes 6 to 12 years. Medium size requires 4⅛ yards of 27-inch material or 3¼ yards of 36-inch material. Price of pattern ten cents.

6293 Misses' Dress.—One of the most comfortable of the simple summer models is shown in this design. The plain blouse opens in front, the neck is low, the armhole extra large and the sleeve short or long. A three-gore skirt, with either raised or regulation waist-line completes the costume.

The dress pattern 6293 is cut in sizes 14, 16 and 18 years. Medium size requires 4⅛ yards of 36-inch material, with ¾ yards of 24-inch satin for the girdle. Price of pattern ten cents.

6312 Ladies' Dress.—This simple dress opens in front, a little to the left of the center of both blouse and skirt. A smart collar trims the neck which is cut out deep in front to display the front piece guimpe which is worn with the dress. The skirt has three gores and is made with the high waistline.

The dress pattern 6312 is cut in sizes 34 to 42 inches bust measure. Medium size requires 4¾ yards of 36-inch material for the dress and ¾ yard of 36-inch lining and ½ yard of 22-inch net for the yoke. Price of pattern ten cents.

6020 Children's Night Drawers.—Every small girl and boy needs a pair of night drawers and here is an excellent pattern for making such a garment. Canton or outing flannel can be used to make this garment.

The pattern 6020 is cut in sizes 1, 3, 5, 7 and 9 years. Size 7 years requires 3 yards of 36-inch material. Price of pattern ten cents.

6248 Ladies' Waist.—Linen, madras or messaline can be used to make this waist with the collar of contrasting goods. The body and sleeve sections are made in one. The waist is made with a sailor collar.

The pattern 6248 is cut in sizes 34 to 42 inches bust measure. Medium size requires 2¾ yards of 36-inch material with ⅝ yard of 27-inch contrasting material and 2 yards of ribbon. Price of pattern ten cents.

MONEY IN PEARS.

The horticultural surprise of the year was the great pear crop. Of course, we have grown pears to some extent before, but we remember no season when there has been such a prolific crop. Every tree, big or little, and of all varieties, made a new record for yield. As a result, we have learned some facts about pear growing of which we were not so sure before, although we may have had some strong opinions. The pear is singularly free from insect injuries, even where the trees are surrounded with apple trees whose fruit was three-fourths destroyed by worms. Pears are not as salable as peaches, and in price are liable to approach the selling price of apples.

In many localities where pears were grown this season, the general public were not familiar with the uses of this fruit, and possibly this accounted for the slow sale. The fruit has been sold at from seventy-five cents to $1.50 per bushel, but such has been the yield of the trees that there was profit, even at the lowest prices.

The writer knows of cases where trees standing so close that an acre would accommodate 400 trees have produced four bushels per tree. If a crop like that should have to be sold at fifty cents per bushel it would yield the snug sum of $800 per acre.

The early pears are like the early apples, in that they will not long endure, but must be used up as soon as ripe. As their season is so short the market must be near and lively to make them pay. As a dessert fruit they come into competition with plums, grapes and the fall apples. Yet, under such conditions, we have found them to sell well when people are once induced to try them. In fact, a sweet, juicy pear is about as near perfection for a dessert fruit as anything we can get to satisfy the majority. It is well-known that the chief difficulty in pear growing, for forty years back, has been the blight, and the effort of planters has been to get varieties that were blight proof. And very likely we have gone a little too far in our neglect of high quality in fruit, endeavoring to secure durable trees.

Certain it is that many trees not considered safe have paid for themselves many time over in this one favorable season. The weakness of the pears, this tendency to blight, usually develops just after the tree comes into heavy bearing.

It is probable that there is such a close connection between these facts that the thinning of the crop, removing half of it, would reduce the fatal results to the trees. We recommend this treatment to pear growers, and admitting that it is at first only experimental, it ought to be tried long enough to establish some facts, pro or con.

The efforts to find non-blighters have had some results. While perhaps no trees are absolutely safe we do have in the Lincoln, Suddoth, Warner, Mt. Vernon and Keifer varieties much less liable to injury than some of the old lists.

Warner and Suddoth have stood to be twelve years old, bearing successive crops with no sign of blight. Mt. Vernon trees of some age show some dead limbs, but are still fruitful. While Keifers of twelve years are dead except a few limbs, one-third of the tree. Of course, the live limbs are loaded to breaking.

The Warner is a small pear, about the size of Seckle. It is ripe September 10th. It is sweet, and a little inclined to be mealy when overripe. Suddoth comes a month later. It is larger, and not quite so sweet.

The Mt. Vernon is large, and a juicy pear, with a little acidity which some people relish very much.

These three varieties are very promising for general planting where early pears are desired, and judging from this year's experience there is big money in growing them.

MENACE OF FIRE IN A DRY TIME.

To the Editor of The Homestead:

A few nights ago I stayed at a farm house in our neighborhood. For some reason I was not sleeping very well and along in the night, wishing to know the time, I got up, struck a match and looked at my watch. As I was holding that flickering bit of wood in my hands waiting for it to go out, the thought came over me with terrible force that we were in that house without a single drop of water save a couple of pailfuls we had brought up from the home place in a milk can that evening. The house well was as dry as a bone, while the spring, which had never failed before out in the pasture nearby, was perfectly dry.

"What would we do in case of a fire? What could we do?"

That is the question which came to me over and over again. And there was no solution to the problem for the present moment. The only thing we could do was to be desperately careful that no such condition might arise. Now, all through that section of the southern tier of New York there are farmhouses which are in just the same state, as far as water is concerned—creeks dry, springs dry, wells dry and no water to be had save by going away to some favored place and bringing in water in a can.

Farmers are praying that winter may not come on before heavy rains start the sources of water. Meanwhile everywhere the utmost care must be maintained to guard against fire. Recklessness in the use and care of pipes, cigars and cigarettes is nothing less than a crime. To throw a lighted cigar stub down anywhere where there is matter that may be ignited should be forbidden by the law of the farm and its master. All ashes should be stored in some place where there will be no danger from the wind fanning the embers into life. The stoves in the house ought to be watched with the utmost care. For it takes only the smallest possible spark to set every building on the place on fire.

Also, there should be some water kept on hand at all times. It must be brought to the farm in cans; let this be attended to every day before night comes on. Many fires could be stopped with a dipperful of water, if a dipperful were on hand. E. L. Vincent.

BIG HOME COMBINATION

FOUR PAPERS FOR THE PRICE OF ONE

I have closed one of the best subscription arrangements ever made by a publisher of a farm paper.

If you will mail your order during the month of November I will send you The Homestead three years, Home Life, McCall's and Today's magazines each one year for the regular subscription price of The Homestead alone. Read about these four papers.

The Homestead

The leading live stock and farm journal of the West. Its editorial advice and the experience of its large corps of contributors are written with the especial purpose of adaptation to the needs of the readers. It takes up in detail every feature of live stock raising, general farming, dairying, poultry growing, etc.

Regular price, $1.50 for three years.

Home Life

Filled with human interest articles on health, hygiene, character, religion, education, and the preservation of the home. It tells how to beautify the home and make it attractive. It contains several pages of short stories and several noted serials during the year.

Regular price, 25 cents per year.

Today's

Today's Magazine is a monthly and contains from 32 to 44 pages. Large, complete woman's magazine. Full of the choicest kind of literature relating to history, travel, science, invention, art, drama, education, religion, music, fashions, needlework, hair dressing, home dressmaking, health, hygiene, cooking, etc. Also short stories and serial stories.

Regular price, 50 cents per year.

McCall's

McCall's Magazine contains from 80 to 124 pages each month and is one of the greatest Woman's Fashion Journals in America. It contains special articles on dressmaking, millinery, fancy work, home decorations and household management. It illustrates 50 to 60 fashion designs every month, some in colors, besides containing numerous other attractive features which make this a favorite magazine in over one million homes.

Regular price, 50 cents a year.

THIS IS MY OFFER

Send me only $1.50 for three full years' subscription to The Homestead and I will send you, without additional charge, McCall's, Today's and Home Life, each one for a full year. Remember, the offer is good only till December 1, 1913. We cannot supply you with the combination after that date. Wrap a fifty-cent piece in a one-dollar bill, attach it to the coupon below and mail it to me at once, at my risk. Do this now, before you forget it.

(This coupon is not good after December 1, 1913.)

Echoes From a Kansas Farm

BY HENRY HATCH

Kansas has lately been enjoying spring-like weather, following a cold snap that was cold enough to put ice the thickness of window glass over water. The freeze killed all ordinary vegetation, including the Kaffir corn.

Binders are now busy cutting the Kaffir crop. Although as green as green can be before the freeze, the leaves now are dry and brittle. There is plenty of sap in the stalk, but with drying weather it will cure out all right.

We find upon cutting, that our Kaffir corn is better than we thought it was. We do not mean by this that the grain it bears so sparingly is better, but the quantity of fodder to the acre is more than we thought. With no bad weather to blacken it while curing, the quality will also be better than the corn fodder.

While the Kaffir corn is short, there is a good stand in most fields, and it is taking a lot of twine to tie it up. Twine, too, is scarce. The dealers find ready takers for each shipment as it comes in. Some fear they may not get twine soon enough so they can tie their Kaffir, but as long as this fine weather lasts the standing fodder will take no hurt.

One of the larger sized sales was held in the neighborhood yesterday. A great crowd was in attendance and all property sold well. Even horses, which have been rather draggy at some sales, sold well. A coming-four mare, weighing around 1400 pounds, brought the high price of the sale, $203. The high price for cows was $80, but both the mare and the cow were good stock.

The terms given at yesterday's sale were rather unusual, there being twelve months' time given at only 6 per cent interest. This favored the time buyer. On the other hand, the cash buyer received no favors, as there was nothing off for cash. The man making the sale was compelled to quit farming because of poor health, and it was understood he is to hold the notes himself.

Not all the cash buying done at sales is really done with cash. Perhaps this sentence sounds rather "off," but it comes about in this way; at the sale where ordinary terms are given, such as usual time with 7 per cent interest and 3 per cent off for cash, a reliable man not having the ready cash can get it at the banks for 8 per cent, and this he will do and pay cash at the sale for what he buys. By doing this, he gets the 3 per cent discount, which makes him pay only 4 per cent, hence the strange assertion that all the cash buying done at sales is not done with cash.

It seems that almost every other man you meet who lives in town is now trying to act as a grain or hay dealer. A commission is what these men are after, which, simmered down, means a chance to make money without work. It is surprising what a horde of such folks are now being kept by the real workers of the world. The number is far too numerous.

It is a waste of valuable time for auctioneers to dwell too long on small articles when there is a large amount of property to be sold in a short day. While most sales are billed to begin at 10 o'clock, the crowd seldom arrives until about 11, so every sale starts practically an hour late. On short winter days, it is chore time for the bulk of the crowd early by the clock, so the sale must end by 5 o'clock at the latest. Taking up too much time selling the small traps is a great mistake.

When an auctioneer starts off a sale by selling things fast, bidding is usually brisk all the way through. People who really want to buy a thing will bid lively as well as tardily if they are made to believe they must speak fast to get it, so all an auctioneer has to do is to start selling rapidly and the crowd will follow him. With bidding kept up at a fast clip, prices are liable to rule higher than otherwise.

STORING CELERY FOR WINTER

"First catch your rabbit" is the first clause of a famous recipe. So with keeping celery, by far the most important preliminary is the growing of it. But we will suppose that you have had the proper soil and have done the required labor and have a good crop of celery, which is sure to be worth money during the coming months. You are naturally anxious about the best ways of storing the same. Experienced gardeners build great surface cellars. They excavate, say three or four feet, and put on a heavy earth roof. Ventilation is provided for so that an even temperature may be maintained, and all danger from freezing upon the one hand, and of overheating upon the other, is eliminated.

These storage rooms are built thirty feet wide and 100 feet long. Earth floors are left, for they are an important part of the equipment.

This cellar should be ready in October and then when the first of November comes "with an eye severe and a stormy language hoarse to hear" and you understand that the northwestern gale means a drop of the mercury to about twenty above, get busy, for the profit upon your celery crop is in danger. Get your own boy and hire your neighbor's boy. Do three days' work in one. Let the boys lift the celery with spades, of course. Run it to the cellar on wheelbarrows, for, of course, you have been wise enough to build your storage room close to the celery patch. The old man (with the strong arm and wise head) begins at the back end of the cellar. He excavates a trench close to the wall four inches deep and wide enough to place the celery roots with the dirt adhering. He tells the boys to strip off all broken leaves. Then he takes it from the barrow and packs it closely in the trench. When the trench is full the whole width of the cellar, he turns a pail of water upon the roots. One pailful will be about enough to moisten the whole row. Then with a light spade he digs down again, another trench, throwing the earth carefully back over the roots of the first row. Another row is placed and the roots wet in precisely the same manner. After about ten rows are placed, leave an alley in the center, packing upon each side. This center alley is needed, because you must be able to get into your stored riches at all times until the crop is sold out. Go on until the cellar is filled. And your alley need not be over two feet wide if space is scarce. If carefully placed over 2,000 dozen can be set out in such a room of the size named. Of course, there is celery and celery. Some roots will be twice as large as others. It all depends upon the varieties grown and the distance apart of the planting. Now if your boys work vigorously and you pile it all out of the way as fast as brought in your crop should be all safely housed by one day's work.

But if you are short of help and have so much of a crop that one day is not time enough to secure it you must scent the blizzard a day in advance and commence operations in time. Be sure of this: you must not let it freeze up in the open. A light frost will not harm it, but when a crust forms upon the soil it will suffer severely.

If you have been industrious enough to bank it high so that all tops are covered of course you are secure. But not one celery grower in ten does that. They depend upon getting it in cellar before the freeze or upon trenching it.

This last plan is simpler and will keep the celery up to Christmas. It consists in digging and packing closely three or four rows wide in an outside ditch and then covering over entirely. If the earth cover is only an inch thick three or four inches of straw or stable manure is added. With care in opening trench to remove the product as wanted it will keep well until real winter settles over you.

But the cellar way is the best. Keep the temperature about forty. Examine often and when you see decaying bunches remove them first and sell upon call. Having caught your rabbit make the most of it: keep your celery in prime condition until the last is sold.

FROM TOWN TO TOWN.

In a few years half the Kansas population will be in the cities if the present figures are carried out. At the present time 39 per cent of the state's total population is in the cities of the state of more than one thousand population, while ten years ago the percentage of town residents was 34 per cent. Two decades more and the Kansas urban and rural population will be practically divided. And while Kansas' cities are becoming larger and more numerous its farm yields an acre are not increasing.

These conditions are a cause of worry to F. D. Coburn, the bookkeeper and statistician for the Kansas farmer. The population figures gathered by Mr. Coburn show that in many Kansas counties the rural population has decreased in ten years, while the urban population has increased materially.

This is true even in the years when there was an actual falling off in the total population of the state. This can mean only one thing—the removal of many farmers to the cities—and Mr. Coburn looks upon the farmer in the city as in about the same condition as a fish out of water.

"The average farmer in the city is a pretty poor sort of citizen," said Mr. Coburn. "He has been used to an active outdoor life and unless he has something to do to keep him employed in town he is one of our more forlorn and discontented men. It is too bad that so many of our farmers are moving to the cities. We need the farm owners on the farms. They keep up the land and the fences and the buildings. He is his own boss and never has to worry about the quality of the work he is doing as the man does who is working under a boss.

"The tenant is interested only in getting the largest crops possible at the least expense of time, labor and money and he cares little about the appearance of the farm.

"The farmer has many advantages a city man cannot enjoy and he is getting now where he has about all the city man has in conveniences and much that the city cannot supply. The rural mail route, electric lights, hot and cold water with modern plumbing, telephones, furnace and everything else the city provides except paved streets and the corner cigar store as a loafing place. Kansas cannot afford to lose any of its farmers and it is too bad that the figures show the greater growth in the cities, rather than in the country."

That the English farmer is also suffering from lack of help is made evident from the following item taken from the London Live Stock Journal: "The heavy land farmer in many districts is troubled to get plow boys in these days, as the work is regarded as monotonous and ill paid, therefore the village lad looks, and goes, townwards. Where pairs and threes can be used with reins, the boy can be dispensed with, but winter plowing on wet land cannot be done in this fashion, and when two men have to be sent with a three-horse team the cost of working arable land is considerably increased. That this is felt by farmers is proved by the fact that advertisements for carters in the provincial papers often end with the words 'one with boys preferred.'"

A recently-issued bulletin from the United States Department of Agriculture says that after a careful study of the habits and the examination of a large number of crow stomachs the biological survey experts of the department have reached the conclusion that the crow consumes enough grasshoppers, cutworms, white grubs and other injurious insects to make him highly valuable to farmers. The one danger from the crow, according to department experts, lies in large numbers. If the number can be kept down so that its normal food is sufficient there is every reason why farmers should encourage the bird to remain about their farms. Evidently the department investigators have overlooked the crow in his capacity as a medium for distribution of swine disease.

Poland China boar at head of the herd of C. B. Powers, Aurora, Neb. See advertisement on page 40.

SHEEP.

ELK GROVE SHROPSHIRES

I AM offering thirty choice rams for sale. Twenty-four yearlings, five two year olds and one five year old, bred by Henry L. Wardwell. Prices $25.00 to $50.00. Address
FRANK RAINIER - - - - - - - - - - LOGAN, IOWA

FORTY GOOD SHROPSHIRE RAMS

ONE, two and three-year-old Shropshire rams. All sired by an imported ram and out of ewes sired by imported rams. The ewes also directly descended from imported ewes. Address
DAVENPORT & MACK - - - - - - BELMOND, IOWA

Golden Hoof Stock Farm

OFFERS a few hundred rams of exceptional merit. No better or more noted flock of Shropshires was ever assembled. The Hampshires are of exceptional merit and the Rambouillet and other breeds offered are of the same high order. If looking for the best ever, and at reasonable prices, address
GEO. ALLEN & SONS, LEXINGTON, NEB

FOREST HILL STOCK FARM

A FEW real bargains left in Shropshire rams, including our flock ram. We now offer ewes bred, at prices that will look good to all contemplating purchasers. Lambs of both sexes. Write or call. Bargains in ewes for next 30 days or until surplus sold.
KAUFMANN BROS., R. 1, MOSCOW, IA.

POLLED DELAINE MERINO SHEEP

EXTRA large rams, also choice young ewes at ½ price.
POLAND CHINA HOGS, BIG-TYPE
Fall and spring boars at $18.00 to $20.00. Rams same prices. Order now and get the best.
F. F. & V. G. Warner - - Bloomfield, Iowa

SHROPSHIRES
of the right breeding.
60 imported and home-bred rams. 40 ram lambs and ewes to match, of the Rector family. C. D. NICHOLS LIVE STOCK CO., Cresco, Ia.

SHROPSHIRE SHEEP

I AM closing out my herd at cut rate prices on account of other business. 11 choice yearling rams, 1 two-year-old ram, and some ram lambs. They are heavy boned and well wooled. Low prices to close out. I am about sold out of ewes.
EARL BLOOM - BRIDGEWATER, IOWA

SHROPSHIRE RAMS, also a few ewes of the very best sort for sale. Address Eugene Haws, Charleston, Neb.

REGISTERED Shropshire lambs and ewes of the best breeding and quality. Willard Miller, R. 2, Anita, Iowa.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, Nov. 1.—About 66,000 cattle registered at Chicago this week, the largest run of the year and a crop full of medium and low-grade stuff. Packers had in close to 5,000 head of canner stock direct from Buffalo, Toronto and elsewhere. The class of stocks running from strictly good to prime was not in such profuse supply this week and there is a growing impression that the reserve supply of that kind in feeders' hands has been reduced to small proportions. Western markets have had lighter cattle supplies this week, but the deluge in the East continues.

All bets are off regarding what is likely to happen in the cattle trade during the next few weeks. Seasonable liquidation is to be expected and the poultry season is right ahead, but the proportion of good cattle in the run is steadily dwindling, which may keep the grades now selling above $8.75 up and thereby widen the spread. Some western cattle are expected next week, but this will practically close the western gathering season. Closing of the pasture season, coupled with high cost of feed, is likely to keep native stuff of common and medium class coming in considerable quantities until the country gets into winter quarters, although there was nothing about the trade at any time this week, especially on the last rounds, to warrant filling the market lap with it next week.

Cattle values show very irregular but some sharply downward price breaks as compared with a week ago. In the beef steer trade prime yearlings and a few loads of prime heavy bullocks that get action on the reputation of the feeder have escaped loss, but everything else is irregularly 10c to 40c lower. Most of the good heavy cattle dropped 10 to 15c, while the rank and file of the $8.25 to $8.85 grades took 25c declines. A part load of fancy yearlings scored $9.85, a new high point for the year and some 1,300-pound bullocks reached $9.40 to $9.50, but heavy cattle selling at $9 had to be of the crackerjack variety and the run has carried a raft of cheap and medium short-fed and grass stuff selling under $8 line that showed the full decline. Butcher she stuff was hard hit, canners and cutters dropping 15c to 25c, while 35c to 50c declines were most general on in-between classes of cows and heifers and even choice fat cows sold 25c lower, prime-fed yearling heifers holding up well in value. The break should be effective in checking the run, the influx or Canadian stuff will soon subside, as well as the movement of Virginia, Kentucky and Tennessee cattle, and liquidation of pasture and stalkfield stuff should soon show abatement, giving the Eastern demand a chance to come back and the market an opportunity to harden.

Some Argentine beef is dribbling into Atlantic markets. The supply is not large enough to be a serious factor in determining prices, but every pound of foreign stuff means one less pound of domestic product needed, as the consumer is getting no benefit in the way of reduced cost of beef. The cattle market may fluctuate 50c per hundredweight in a week, but retail prices are fixed and those who make them inexorable.

Volume of trade in stock and feeding cattle the past week was the heaviest of the year, buyers from Illinois, Indiana and Ohio flocking Chicago were attracted by sharp downward breaks in prices Monday and within recent weeks. Fair call also developed from New York, Michigan, Pennsylvania and Iowa and Wisconsin buyers were somewhat in evidence. The big supply was well cleared by week-end at 10c to 25c declines from the week previous, the bulk showing 50c to 65c declines from high time early in October. It is largely a $6.50 to $7.25 market and fair to choice 850 to 1,000-pound weights, best fleshy feeders reaching $7.50, while $6 to $6.75 is now taking the bulk of the stocker steers.

Packers have intimated by their bearish attitude late this week that their bear campaign in the hog market would be resumed and pushed vigorously next week, and shippers under the delusion that the boom early this week is of durable variety are likely to experience a rude awakening, if supply proves at all generous. Market sentiment is by no means bullish and the reaction of the last week has undoubtedly been due solely to lack of ammunition, country shippers being afraid to continue gathering in the face of a continuous decline. There were 11,000 more hogs at eleven markets Friday than a week ago and packers regard this as a herald of a swelling movement and easier picking next week, in case they will resume the price-smashing process, a stunt possible only when supply is in excess of fresh meat demand.

Bulk of the hogs sold on the Friday market at $7.85 to $8.15, the general average at $8 standing 15c higher than a week ago. The extreme top at $8.30 was but 5c higher but most packing stuff was 25c up, the range in prices having narrowed. Packers make a semi-official announcement that their objective point is 6½c for house droves, but the trade does not believe common cost can be held as low as 7c for any considerable time during the winter packing season unless growers decide to liquidate the new crop of hogs prematurely regardless of what they realize owing to high cost of corn.

Some of the provision specialists take issue with Patrick Cudahy in his prediction that there will be 1,000,000 more hogs packed from now to March than a year ago. They still hold to the belief that the premature marketings of drouth and cholera scarce hogs together may mean a dearth instead of a surplus. In any event they also believe that January products are quite likely to sell higher than the May delivery, as there is but a small supply of product at a profit at the current prices prevailing for both. There is but little chance to manufacture ribs in time for January delivery, and there is not much over 300,000 pounds of ribs now available for delivery.

Friday's closing hog quotations on the Chicago market follow:

Bulk of sales	$7.85@8.15
Mixed, 210 to 250 lbs	7.80@8.00
Mixed, 170 to 200 lbs	7.80@8.00
Medium weights	8.00@8.10
Light butchers	8.10@8.20
Heavy butchers	8.15@8.25
Light shippers	8.00@8.10
Heavy shippers	8.15@8.25
Heavy packing	7.70@7.95
Rough, heavy packing	7.50@7.65
Throughout packing sows	6.75@7.40
Fair to choice light	7.75@8.05
Light-light, 135 to 155 lbs	7.50@7.85
Pigs, good to fancy	6.75@7.70
Pigs, inferior to fair	5.25@6.65
½Boars, inferior to choice	1.00@3.00
Stags, subject to dockage	7.90@8.40
Government throwouts	4.00@5.00

½Subject to Government inspection.

Ovine trade opened the week under the handicap of a 68,000 head supply on Monday, and fat lambs closed that session at a 25c to 35c decline. The loss was all repaired by early Friday, but a 10c lower close at week-end was a warning to sellers not to crowd next week's market. Sheep and lambs are selling high for this season of the year and eastern dressed markets are not as healthy as they might be. What the immediate future market has in store the selling side depends wholly upon supply and it is variously reckoned. Range stuff from the Dakotas and Montanas will be run for two or three weeks yet, but it has fallen to a feeder crop almost exclusively. Holders of fed westerns are showing a disposition to cash in early-bought stuff to escape a feed bill and a run of half-fat stuff of that character and a good supply of natives is feared. At week-end fair to best fat lambs are selling at $7.00 to $7.50, feeders largely at $6.25 to $6.65 fat ewes from $4.25 to $4.50, feeders up to $3.85 and good culls to $3.25, while choice fat yearling wethers of light weight are quotable at $6.00 to $6.25 and best wethers to $5.10.

October receipts of live stock on the Chicago market, with comparisons with October, 1912, follow:

	1913.	1912.	Inc. or Dec.
Cattle	242,175	272,238	†30,063
Calves	19,914	26,867	†6,953
Hogs	642,278	521,874	*120,400
Sheep	803,459	803,085	*374
Horses	5,019	6,124	†1,105
Cars	22,979	22,813	*166

*Increase. †Decrease.

Chicago livestock receipts for the ten expired months of the year, with comparisons:

	1913.	1912.	Inc. or Dec.
Cattle	2,044,254	2,164,480	†120,226
Calves	33,150	458,801	†125,651
Hogs	6,042,916	5,946,580	*96,336
Sheep	4,730,890	4,861,673	†130,783
Horses	82,100	84,250	†2,150
Cars	208,601	209,526	†925

*Increase. †Decrease.

For the first ten months of 1913 six leading western markets received approximately 6,264,000 cattle, 14,975,000 hogs and 10,940,000 sheep, a decrease of 59,000 cattle and 709,000 hogs, and an increase of 94,000 sheep over corresponding time last year.

AN AUTO ENGINE FOR POWER PURPOSES.

To the Editor of The Homestead:

I notice your inquiry from a subscriber who desires to know whether any one has had experience with an auto engine for furnishing stationary power. I also notice that he cay buy an old machine cheap and thinks that the engine is all right.

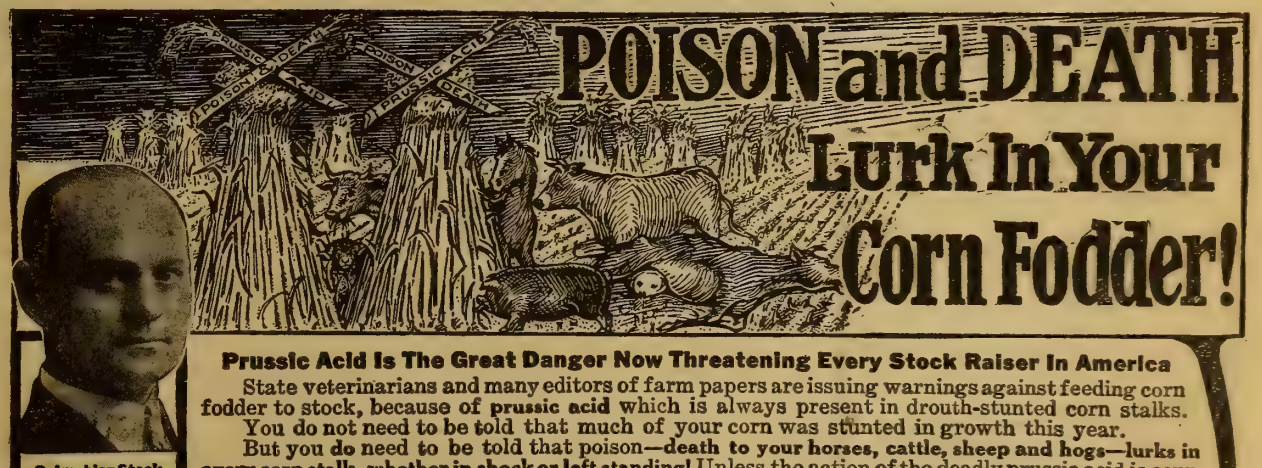
The following is my experience: I purchased a forty-horse power auto engine, had it mounted on a good, heavy, gas engine truck, tapped the fly wheel of the original engine and fastened a sprocket wheel to this fly wheel and ran a chain from this to a shaft about twenty inches above and on this shaft (that is fastened to the truck with very heavy braces) another sprocket which, of course, turns the power shaft upon which I have different-sized pulleys.

As to power I think it will yank anything along in good shape that the ordinary sixteen to twenty-horse power gas engine won't budge. I am now rigging this up for the same purpose that your subscriber desires to use it; that is, I am rigging the feed grinder. The engine works, because I cut nearly a thousand tons of ensilage with it this fall and it did not choke down any oftener than a steamer and I can cut seventy-five tons a day of ten hours. The only thing so far that I have had trouble with is keeping it cool. An auto engine is designed with small radiator and fan that will work while the machine is traveling, but not so while it is stationary.

The water boils, or nearly so, very quickly. After trying several devices I have a five-barrel galvanized tank that I fill with water and as it gets too hot I let the engine pump the water (with the circulating pump) on the ground and replace with cold.

As to its being practical, I think mine is, but there are several things to take into account. When an engine is bought, be absolutely sure that it is a good one; an auto engine is very apt to be worn out long before the balance of the car and I think 90 per cent of them are no good. Get a big one; that is, with a large cylinder displacement. Horse power may be all right the way they figure it, but I know of some forty-horse power autos that really have twenty-eight and if the engine is in bad shape it might not pump enough water to keep itself cool. Have a good machinist "rig" it up; it will cost considerable, perhaps nearly as much as an engine originally built for the purpose. I have mine with self-oiler, magneto and only start with batteries.

Nebraska. Fred E. Mockett.



Prussic Acid Is The Great Danger Now Threatening Every Stock Raiser In America

State veterinarians and many editors of farm papers are issuing warnings against feeding corn fodder to stock, because of **prussic acid** which is always present in drouth-stunted corn stalks.

You do not need to be told that much of your corn was stunted in growth this year.

But you do need to be told that poison—**death to your horses, cattle, sheep and hogs—lurks in every corn stalk, whether in shock or left standing!** Unless the action of the deadly prussic acid is counteracted it often kills in a few hours. Many stock losses from this source have already been reported.

Every hog raiser knows too, the danger of feeding new corn to his hogs, especially as in this year it is chaffy and stunted. It causes one of the worst forms of indigestion and worms, and like cholera frequently wipes out whole herds in a few days.

I CAN PREVENT THAT LOSS

Let me prove to you, before you pay me a cent, that the deadly effects of corn fodder poison and of new corn fed to hogs are positively counteracted by giving your stock free access to Columbian Stock Powders.

The forage poison (prussic acid) and new corn cause acidity of the stomach and fermentation resulting in acute digestive troubles which quickly cause death. Columbian Stock Powders are anti-acid and anti-fermentative. Feed these powders and you can give your stock the free run of the fields—standing or in shock. All ill effects from eating the undeveloped corn and stunted stalks will be absolutely counteracted.

Columbian Stock Powders best for general stock feeding, exterminating worms, fattening hogs and preventing hog cholera.

Cattle Tone—A powerful, highly concentrated digestive tonic for cattle. The sure, quick way to turn corn into beef.

Columbian Sheep Powders—Especially prepared to keep sheep free from disease and worms, stop losses and increase profits. A wonderful appetizer and tonic. Counteracts acidity in fodder and silage.

COLUMBIAN STOCK POWDERS

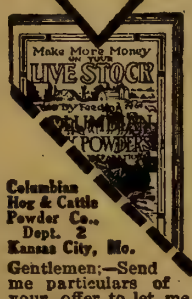
are not a food, but a highly efficient medicated preparation. They contain a powerful vermifuge and not only kill but expel all worms in hogs, horses and sheep. These strength-sapping, disease-breeding parasites are the cause of fully 90 per cent of all stock diseases. You must get rid of them in order to have thrifty stock. The only way to keep your stock vigorous, free from worms and disease and poison-proof is to treat them internally with Columbian Stock Powders. Will put a speedy end to all their digestive troubles, make them fat and sleek, and keep them in finest condition. Indispensable for brood sows because it keeps them free from fever, insures strong healthy litters and an abundant flow of pure milk.

A BIG PROFIT MAKER—NOT AN EXPENSE

Columbian Stock Powders are not only insurance against stock losses—they actually increase your stock profits. Enable you to fatten hogs with less feed and shorten the fattening period. Start feeding "Columbian" to your fall pigs now before cold weather sets in, so as to hasten their growth and insure more pounds of prime pork. In daily use by thousands of practical raisers who declare that "Columbian" has put stock raising on a permanently profitable basis for them.

Write For My 90 Days Free Trial Offer

Just write or mail coupon stating how many hogs, cattle, horses and sheep you are feeding and I'll make you an offer whereby you may try Columbian Stock Powders 90 days before paying me a cent. I absolutely convince you that it's big money in your pocket to keep on feeding them. This is the most liberal offer ever made on a proposition of this kind. Don't fail to take advantage of it.



FREE Our new book on hog and stock raising is just off the press—an intensely interesting and highly instructive book that you should read. Gives lots of valuable information and experiences of many of the largest and most successful stock raisers. Send coupon today for your free copy.

Columbian Hog & Cattle Powder Co.,
Dept. 2

Regular price is $5; but if you will write or mail coupon, at once I will tell you how to get one **FREE**

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000

for erecting your buildings, fencing, sinking well and breaking. You have twenty years in which to repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based On Good Land

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps. Write today.

Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

Common Sense Methods of Livestock Feeding.

THAT the economical feeding of livestock is of great importance no one for a moment will deny, yet how few farmers we find who are at all acquainted with the principles which are involved or understand the cause of which they, in their practice, see only the effects. They learn from experience that some kinds of food contain greater fattening properties than others, yet are content with this imperfect knowledge and pay no attention to an investigation of the causes of these differences.

Of course it is not to be expected that every farmer can conduct scientific investigations of the various kinds of animal foods, but there is no reason why he should not keep in close touch with the experimental farms and agricultural colleges and keep posted in their results instead of blindly following the old routine adopted by his forefathers without even an effort or desire for improvement.

It is not sufficient for a feeder to know that some kinds of grain, forage and roots possess fattening properties exceeding those of others, but he should understand why this is so and be able to mix his stock feeds so that he can obtain results at the smallest possible outlay.

It is not only necessary that a feeder should understand the values of the various feeds he uses so that he can use them in the most judicious manner, but he should understand the principles by which they operate and provide nourishment to his animals and thus be enabled to employ those containing the most desirable elements for each particular branch of feeding, and also be enabled to go into the feed markets and buy grain foods that will prove adapted to his needs. It is not my purpose to discuss this question scientifically, but to discuss the two classes of animal foods and how to utilize them in the most profitable manner.

Albuminoids, protein or nitrogenous food stuffs are meat and milk making, and their base is nitrogen. This element is nearly pure in the white of an egg, and it predominates in albumin, gluten, gelatin, fibrin, casein and all proteins, both vegetable and animal. This protein is the expensive element and the element which is deficient in the generality of home-grown stock foods. Hence we should make a special effort to produce foods on our farms that are rich in this element, such as clover, cowpeas, alfalfa, rich pasture grasses and other forage and fodder crops that are rich in protein.

The carbohydrates or carbonaceous foods are the heat and fat producing foods and their base is carbon. This element predominates in the diamond, coal, wood fiber, starch, sugar, oil, resin etc. These foods are cheaper than those rich in protein, and most of our home-grown foods contain an excess of these carbohydrates. The proper balance of these two classes of foods for young stock and milk cows is about one part protein to six parts of carbohydrates. The ration for each 1,000 pounds of live weight is 24 pounds of dry food per day, of which 15 pounds must be digestible, and the 2.5 pounds of this must be nitrogenous or the equivalent of this. Thirty pounds of clover hay is about an equivalent. In order to more fully explain this subject we will quote a few tables and show their relative values when fed singly or mixed with other foods. Below is given the institute ratio of some of the so-called nitrogenous foods:

Skimmed milk	1 to 1.9
Buttermilk	1 to 2.6
Cottonseed cake	1 to 1.8
Brewers' grains	1 to 3.0
Hempseed cake	1 to 1.5
Red clover	1 to 3.8
Alfalfa before bloom	1 to 2.3
Flaxseed	1 to 3.1
Linseed cake	1 to 2.0
Rape cake	1 to 1.7
Malt sprouts	1 to 2.2
Sunflower seed	1 to 1.3
Peas	1 to 2.9
Pasture clover	1 to 2.5
Field beans	1 to 2.3
Pea meal	1 to 3.0

These foods should be balanced with carbonaceous ones, or they will injure the animal or go to waste. The nitrogenous element goes to make meat, muscle, casein or cheese. These foods are the most expensive and difficult to obtain, hence they are seldom overfed. It has been clearly demonstrated that the fats in milk do not come from carbonaceous foods, but from a proper combination of these foods with nitrogenous foods. All concentrated foods should be fed with care and caution. The aim of the feeder should be to feed both bulky and concentrated foods at the same time. The wise feeder will grow a variety of both classes of foods to supply the needs of his animals and buy such as he cannot grow on his own farm to feed in connection with what he may be able to grow at home. It will pay, not only as a gratification to his animals, but as a true economy from the money side of the question. The attention of the farmers should be devoted to the science of feeding animals in an economical and efficient manner.

There is another class of foods that are fairly well balanced as far as protein and carbohydrates are concerned, but these foods must be utilized with coarser foods to give the stomach proper stimulus or distension, to keep its contents loose so that the gastric juices may act on and digest them. When we feed two classes of foods that are not properly balanced there is a waste. True economy consists in the feeding of a properly balanced ration and one the animals will eat up clean. The various foods may be balanced by feeding them alternately as well as in combination, but when feeding some of the more highly concentrated grain foods it is often desirable to utilize some of the more bulky foods as a divider in the ration, so that the juices of the stomach may obtain a more favorable action on the fine particles of food and prepare them for more perfect digestion and assimilation. While feeding dairy cattle we have found that they are enabled to make better use of their grain foods when they are fed with ensilage. In this way the ensilage acts as a divider and helps to separate the particles of grain food and assist in the work of digestion. The juices also act upon the grain food and assist in the work of digestion. There are some kinds of grain foods that are made more palatable by the use of a divider, such as middlings, low grade flour, oil meal and other foods that are inclined to form a sticky, doughy mass that makes them unpalatable to some kinds of farm animals. Cut clover or alfalfa can be used to advantage as a divider of grain foods, and if horses are being fed heavily with grain it is many times advantageous to mix the grain with cut hay to prevent them from becoming gorged with too much food. Swine also obtain great benefits from clover and grasses while they are being fed cornmeal and other rich concentrated foods that have a tendency to form a doughy, sticky mass in their stomachs. We must plan to make all our rations palatable as well as balanced. Some animals do not like one kind of food as well as another, and a careful feeder will study the likes and dislikes of his animals as well as their capacity to consume the various rations at a profit, and plan his system of feeding to meet the individual needs of the animals that are being fed.

There is another point that we should keep in mind, and to illustrate it we will consider alfalfa. Here we have a food that is fairly well balanced, but if anything it contains a little too much protein, so we add a little corn ensilage or timothy hay to make a balanced feed, but when we feed it we do not get as good results as our figures show. What is the reason? Simply that the ration contains too much coarse, woody, indigestible fiber, and it requires too large a waste of the animal's energy to eat, digest and assimilate the ration. Thus we see it would be better to supplement the

$850 profit per family!

The surplus farm profits in Southeast Missouri average $850 *per family*. Farmers of this section are making big money because their soil is the *deepest* and *richest* in America.

"Albert Paintor, of Malden cleared 235 acres and put it in cultivation. His first crop of corn averaged 75 bu. per acre. "This land", he says, "is worth $100 when it begins to grow corn. Yet there is plenty of it that can be bought, unimproved at $25 to $35 per acre and it costs only $10 to $15 to clear." Along the

Cotton Belt Route in Southeast Missouri

a man can make big money in stock raising. Cattle and hogs go through the whole winter without stall feeding. Seven months are without frost; and the pastures are green every month. E. J. Mahoney, of Stoddard County says "Last fall, we bought 50 head of young calves for $10 a head, pastured them all winter on wheat and sold them in the spring for $31 a head. We finished them on cotton seed meal, but fed nothing else."

Think of this rich soil—10 to 50 feet deep—**close** to the big city markets, in the **center** of civilization, with all the social advantages of good schools, fine modern towns, churches, phones, rural service—surely here is an apportunity for the progressive farmer. These lands have not been grabbed before, because it was only recently that the U. S. Government took hold of the drainage, and made the land productive and healthful.

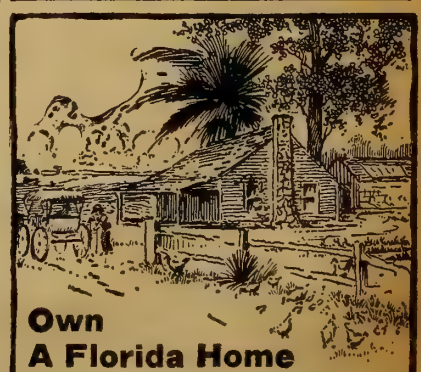
Book by a farmer—free!

We got a practical farmer to travel all along the Cotton Belt Route and talk with the farmers themselves, get **pictures** of their farms and their **personal** statements. Because he **was** a farmer this man knew what you wanted to know about these sections and he tells you in this free book—showing **scores** of actual **photograph** pictures of the farms he visited. You must not miss seeing this book. Send me your name and address on a post card today.

E. W. LaBeaume, Gen'l Passenger Agent,
1008 Pierce Building, St. Louis, Mo.

Low Fare Excursions via Cotton Belt Route on 1st and 3rd Tuesdays each month. Ask me about them, write!

COTTON BELT ROUTE



Own A Florida Home

Thousands of persons are *dreaming* and *planning* to own a *little farm* some day. Are *you* one of them? A *home* with a grove, truck farm, and poultry yard in *Florida* means *independence.* Success is easier than failure. Let us help you locate right. alfalfa hay with concentrated grain food.

As a general proposition the great problem is to find foods rich in protein to supplement the carbohydrates, but in feeding skim milk we face a different problem, for here the carbohydrates have been removed and the protein of the whole milk condensed into the skim milk so we find it economical to feed corn and other feeds with skim milk to young and growing animals. Many practical feeders use whole corn with excellent results. Professor Henry, of Wisconsin, found that the best results came from feeding not to exceed five pounds of skim milk with one pound of corn. For calves that are eating hay, the proportion may be larger.

Another fact that is not recognized among farmers in general is that early cut and properly cured hay contains from 20 to 50 per cent more digestible nutrients than late cut hay. Among the foods that are classed as well balanced may be named the following:

Cow's milk	1 to 4.4
Wheat meal	1 to 5.7
Wheat bran	1 to 5.6
Millet	1 to 5.4
Red top	1 to 5.4
Alsike	1 to 4.9
Quack grass	1 to 5.2
Turnips	1 to 5.8
Barley middlings	1 to 6.0
Buckwheat bran	1 to 4.1
Rye bran	1 to 4.1
Cottonseed	1 to 4.6
Wheat	1 te 5.8
Red clover	1 to 5.7
Fermented beet leaves	1 to 4.0
Ruta-baga leaves	1 to 3.9

All these foods should be fed with others, or alternately, so as to make them palatable and prepare them for perfect digestion. Some may be fed alternately with good results, but care should be taken to feed a wide variety and not two foods alone.

Next we will consider the carbonaceous foods. If not fed other food the animals crave the nitrogenous elements which these foods are deficient in. They will gorge themselves in their efforts to get sufficient of the nitrogenous elements. We must keep in mind that these foods contain chiefly fat and heat-producing elements. If the animals are exposed to the weather they will require more of these foods than if kept in a warm barn or stable. The following is a list of some of these foods with the nutritive ratio of each:

Cream	1 to 30.5
Wheat bran	1 to 9.7
Corn bran	1 to 10.3
Wheat middlings	1 to 6.9
Pumpkins	1 to 18.4
Buckwheat grain	1 to 7.4
Corn	1 to 8.6
Oats	1 to 6.1
Barley	1 to 7.9
Rye	1 to 7.0
Carrots	1 to 9.3
Sugar beets	1 to 17.0
Ruta-bagas	1 to 8.3
Potatoes	1 to 10.4
Artichokes	1 to 8.3
Cornstalks	1 to 34.4
Oat straw	1 to 29.9
Rye straw	1 to 52.0
Corn ensilage	1 to 12.0
Sorghum	1 to 7.4
Fodder oats	1 to 7.2
Hungarian grass	1 to 7.1
Fodder rye	1 to 7.2
Blue grass, in bloom	1 to 7.5
Timothy	1 to 8.1
Orchard grass	1 to 6.5
Meadow hay, medium	1 to 8.0
Apples and pears	1 to 43.0
Corncobs	1 to 71.2
Oat chaff	1 to 33.8

Many of these carbonaceous foods are more valuable than others owing to their mechanical action. Some of the root crops may be utilized as a source of protein up to a certain amount a day and take the place of protein feeds. Root crops can be more profitably fed if the animals are being fed no other form of succulence. There are numerous protein feeds on the market, and we would advise every feeder to keep in close touch with his nearest experimental farm and read the bulletins concerning these feeding problems and know the value and composition of the various kinds of materials he uses.

EXPERIMENT WITH SIBERIAN ALFALFA.

The middle Northwestern states have become tremendously interested in the alfalfa problem, says W. P. Kirkwood in The Review of Reviews. They see in this wonderful forage the basis of more stable and profitable farming. But they have had trouble to find just the hardy kinds of the plant needed to meet rigorous climatic conditions. A campaign now well under way in South Dakota—to grow alfalfa widely and especially to reclaim the high-and-dry lands of the state with alfalfas obtained from Siberia and Russia—is, therefore, of the utmost significance to western agriculture. It is certainly one of the most significant movements in agriculture today.

The great importance of the movement lies in the tremendous value of alfalfa as a forage for practically every kind of live stock. Alfalfa grows luxuriantly, giving abundant yields, it is rich in protein, it is extremely palatable, it gathers nitrogen abundantly, it renovates the soil and provides better conditions for succeeding crops, and it is long lived. It has been the chief support of great peoples in the region between the Indian Ocean and the Mediterranean, famous for its herds since long before the Christian era. By helping to restore the live stock industry of the western uplands it will directly enhance the wealth of the West. But live stock means improved soil conditions and these spell better crops of different varieties. Consequently alfalfa means more stock raising and more crop raising, and greater general prosperity wherever it can be grown. It has been proved that the Russian and Siberian alfalfas can be grown on the high-and-dry uplands. Hence the effort to extend the alfalfa areas over these regions, if successful, means immensely increased prosperity. It is little wonder that the people of the middle Northwest are interested.

Professor Hansen believes that even rough lands of the high and dry kind in the Northwest of our country can be made valuable—possibly worth $100 an acre—if they can be made to grow alfalfas. The success of South Dakota's campaign, which already is assured through the co-operative work of some fifteen hundred farmers under the professor's direction, will, therefore, point the way to the profitable use of millions upon millions of acres of uplands in the vast region between the Mississippi River and the Missouri on the east, and the Rocky Mountains on the west, and from the Panhandle of Texas on the south far to the northward. This will mean reclamation of a high order and on an immense scale, where irrigation is quite out of the question.

Alfalfas for such areas had long been dreamed of, but never realized in this country. From the Panhandle of Texas, from Oklahoma, from western Kansas, from Colorado, Idaho, Montana and elsewhere, came the cry for something of the kind, but in vain. The common alfalfas would not do. Unless provided with ample moisture in the summer and covered with a blanket of snow in the winter they would die out. A hardier variety must be found. Then came Professor Hansen with a new philosophy of plant life and the discovery of hardy alfalfas in Russia and in the heart of Asia, giving promise of a vast extension of the alfalfa belt on this continent and of a drouth resistant and cold resistant forage for the high-and-dry uplands. It is upon experiments with these new alfalfas that men and women who have been trying to subjugate dry, cold areas are now building their hopes.

DOUBLE HOG HOUSES.

A subscriber who has been unusually successful as a pork producer has adopted the plan of double hog house herewith illustrated. He argues that the natural tendency of the hog is toward sociability and if two litters are housed in a double house separated, of course, by a partition, that they will do better than if each were in a separate house and much better, certainly, than if all were together. Each litter will keep to its own department of this house. As will be seen the construction is of the simplest character, a minimum of lumber being necessary and the work such as any farm mechanic can do. It affords protection just as well as the most expensive hog house. In emergency it may be moved from lot to lot. This house is seven feet high, ten and a half feet wide, and six feet long. The doors are two feet wide and two and a half feet deep.

CHEAP AND CONVENIENT DOUBLE HOG HOUSE.

CROW IS THE FARMER'S FRIEND.

"Be kind to the crow," is the injunction issued to city and country dwellers alike by the department of agriculture. The crow has been found as the result of first hand study by experts of the biological survey to be a friend to the farmer and a champion of the corn crop. "After a careful study of the habits and the examinations of a large number of stomachs," it is said, "the department experts have come to the conclusion that the crow consumed enough grasshoppers, cutworms, white grubs and other injurious insects to make him highly valuable to farmers. There is, however, one bad habit which the crow has, and that is the destruction of young birds and birds' eggs, but this trait is outweighed by the good the bird is doing for the farmer in the destruction of worms and insects.

Scientists tell us that the compounds of nitrogen are broken up during warm weather by the rapid growth of minute germs that live in the soil, and that it is due to the presence of these germs on the roots of clover that that plant is able to secure such a large amount of nitrogen. This is running the germ theory into the ground.

That lime may be used with benefit on some soils has become a stern fact, based on the experience of farmers of many countries extending through many centuries. Roman farmers practiced marling more than 2,000 years ago. The use of lime for agricultural purposes was well known to the English more than 250 years ago. No doubt the Chinese were the first to use lime on the soil.

NEWS OF THE SALE RING

The Lake Mills Holstein Sale.

The eighth semi-annual sale of the Lake Mills Holstein Breeders' Consignment Sale Company, held October 29th, adds another laurel to the crown of success which this sales company has achieved in the past four years. Held as usual in their finely equipped sales barn, which is reported to be the best arranged dairy sales barn in the United States, they drew a crowd of over 500 interested breeders and lovers of the black and white. Colonel Hager, of Algonquin, Illinois, Colonel Mack, of Fort Atkinson, assisted by Colonel Love, conducted the selling in a most excellent manner, and are to be complimented on the satisfaction which they gave, both to consigners and purchasers. The sales barn, which is one of the elements that makes this one of the most successful sales is equipped for the comfort and convenience of consigners, purchasers and the cattle consigned. The loading platform is 165 feet long, located directly on the main line of the Chicago & Northwestern Railroad. Eight cars can be loaded or unloaded at one time. The building is 165x60 feet on the main floor. This floor contains office, sales ring with elevated seats accommodating 400, one ton elevator, dining room and kitchen, box stalls, fifteen feet by 140 feet total length, toilet rooms, etc. The second boor contains a hay loft, which holds four tons of hay and bedding and sleeping rooms for attendants. The basement, 40x165 feet, contains stanchions for cattle, 255 head can be comfortably housed under cover. The dining room, one of the attractive features of the building, will seat 260 people and is completely furnished with tables, silverware and dishes. Much credit should be given the ladies of the Methodist church for the excellent meals served. The sale was enthusiastic from the start, although at the first some great bargains were picked up as all the buyers had not yet arrived. Among the heavy bidders were: J. W. Goldthorp, of Genoa Jct., Wis.; John Abbott, of Palmyra, Wis.; F. E. Getzelman, of Hampshire, Ill.; Dr. H. B. Faville, of Chicago; H. A. Yates, of Belvedere, Ill.; Henry Royce, of Spokane, Wash.; Archie Reid, of Janesville and several others. Mr. Getzelman spoke several times urging the breeders to bid more on certain particular animals, although he was trying to buy the animals himself. Brown Brothers, of Hartford, S. D., who held a sale of eighty grade Holsteins in September, were present and took twenty fine animals. Mr. N. A. Hanson, of Galloway, Minn., representing the Detroit (Minnesota) Commercial Club, purchased several animals, which the club will introduce into the territory surrounding Detroit to improve the herds. The buyers represented nearly every state in the northwest section of the United States, Illinois, Iowa, North and South Dakotas, Minnesota, Wisconsin and Washington, being the heaviest recipients of the offering. There were 104 animals sold at an average of $236.78 for both old and young, totaling $24,625. Offers of $200, $150 and $125 were frequently heard for the unborn calves of the cows sold, because of the excellent breeding on the sire's side. J. Bristol & Sons, of Oakfield, Wis., had the largest offering, which contained nineteen females bred to King Segis Pontiac Polkadot. The highest priced bull, Sir Ormsby Pontiac Korndyke, consigned by Nathan E. Gatzert, sold for $1,125. The highest priced cow, Ivy Ormsby De Kol, consigned by Frank Fargo, sold for $975, Uneeda Korndyke Dema, a senior yearling who sold for $335, was the highest priced heifer. The highest priced bull calf was a son of King Segis Pontiac Polkadot from an untested dam. This calf was but a few days old, and sold for $95. The highest priced heifer calf, one day old, daughter of Ivy Ormsby De Kol, the record-priced cow of the sale, sold for $325. This was the most phenomenal sale of the day. The consigners were: M. E. Hoffman, of Bassett, Wis.; F. J. Bristol & Sons, of Oakfield, Wis.; F. B. Fargo, S. W. Faville, Wm. Everson & Sons, Milan Demerit, C. B. Rutherford and E. J. Fargo, all of Lake Mills, Wis.; John Hetts, of Fort Atkinson, Wis., and Nathan E. Gatzert, of Libertyville, Ill.

104 head	$24,625;	average..$236.78
91 females	21,445;	average.. 235.66
13 males	3,180;	average.. 244.61

The Thurman Sale.

One of the largest crowds seen at a sale in southwestern Iowa, in many years was present at the dispersion of the Short-horn and Shire herds of A. G. Thurman, at Blanchard, on October 30th. The sale was in all respects a good one from start to finish. The Shires and Percherons made an average of $363 and the Short-horns averaged $141 on everything, including calves. Mr. Ted Dunbar, Clarinda, Iowa, was a heavy buyer and secured most of the Shires as well as the old bull, Master B. Mr. W. M. Golding, Maryville, Mo., secured the very best of the cattle, getting Orange Bud, a daughter of the great Ringmaster at $285 and Birdie Gloster at $195. Ramsden's Missie, a well-bred Cruickshank Missie, and one of the best cows, went to J. W. Barber, Skidmore, Mo., at $220, while H. C. Chandler got Dora of Woodbine at $215. Col. Harve Duncan cried the sale and did splendid work. Below we list those lots that sold for $100 and above:

Keota Teddy 6882, July, 1900; Steve Belding, Northboro, Iowa	$400
Hector Prince 91431, June, 1911; J. S. Athen, Hamburg, Iowa	380
Beechnut Flower, 1906; Ted Dunbar, Clarinda, Iowa	380
Bonnie Royal, April, 1911; Ted Dunbar	475
Rosa, Ted Dunbar	470
Lady Lawrence, June, 1904; Ted Dunbar	295
Pride of Cromwell, May, 1908; Economy Stock Farm, Shenandoah, Iowa	225
Peach Blossom, May, 1913; Ted Dunbar	210
Evalena 4th, June, 1909; Ted Dunbar	495
Lady Betsey, June, 1910; Elson White, College Springs, Iowa	350
Clarinda Jen, July, 1910; W. M. Golding, Maryville, Mo.	315

SHORT-HORNS.
BULLS.

Master B., 303462, calved January, 1907; Ted Dunbar	210
Ramsden's Cumberland, calved January, 1913; V. L. Gaston, Tabor, Iowa	160
Master D., calved November, 1912; Chas. Steele, Blanchard, Iowa	120
Woodbine Boy, calved April, 1913; Geo Webster, Blanchard, Iowa	125
Duke of Woodbine, calved January, 1913; John Luhr, College Springs, Iowa	110
Bull calf, 8 months; A. O. Stanley, Sheridan, Mo.	165

FEMALES.

Red Rose, calved July, 1910; L. T. Folk, Essex, Iowa	170
Woodbine Lady, calved August 1909; N. I. Staples Burlington	

LANDS AND HOMES

Nevada

is calling you. The pioneer mineral state in the country has thousands of acres of good farming land. Subject to dry farming or irrigation by wells. Your markets are at home. The miners of Nevada buy the best and pay the highest prices. There are 100,000 acres in Elko County at prices from $2.50 to $12.00 an acre Write and I will send you free information regarding this land

B. A. McALLASTER,
Land Comm., 803D Flood Bldg., SAN FRANCISCO, CAL.

RANCH OF 930 ACRES

WITH 8-room house only 3 miles of town in Franklin Co., for only $30,000, worth $50,000. We also offer a good wheat farm. Address **BUCKEYE AGENCY, OTTAWA, KANSAS**

SOUTHERN MINNESOTA CORN LANDS

GROWS any grain Iowa farmer grows. Improved land $65 to $125 per acre. Address **McCadden & Allison, Fairmont, Minnesota**

OUT THEY GO $2 AN ACRE DOWN

And then you can pay for one of our 160 or 320-acre farms out of the proceeds of one-half of the crop raised yearly until the farm is paid for. Come on out with the down payment and select your land—20,000 acres to select from. Prices $15 to $30 an acre and good land. Where can you beat these terms for such rich land? Write for facts or come right to our office now. Wm. H. Brown Co., Mandan, Morton Co., North Dakota, or Mott, Hettinger Co., North Dakota, or 5 N. LaSalle St., Chicago. Get in while land is cheap.

Land Opportunity

is for the man who carefully investigates before he buys. There are many large and small tracts of good land along the Union Pacific System Lines. Your land opportunity is among them. I will give you free authentic information concerning any of these tracts if you will write to me. It will pay you to investigate before you move.

R. A. SMITH,
Colonization and Industrial Agent, Union Pacific Railroad Co., Room 1188, Union Pacific Building.
OMAHA, NEBRASKA.

STATE LAND SALE IN NEW MEXICO

ON December 8th, 1913, there will be sold at the court house in Deming, New Mexico, **18,000** acres of land. Practically all the land will be sold in tracts of six hundred forty acres. The land is in what is known as the shallow water belt, and irrigation by pumping is being operated successfully on lands in that vicinity. The terms of sale are cash, or ten per cent of the highest bid, the balance divided into thirty equal annual payments, with four per cent interest on all deferred payments. **Robert P. Ervien, Commissioner of Public Lands, Santa Fe, N. Mex.**

STOCK CATTLE RANCH FOR SALE

STOCK Cattle Ranch in Central Oregon, 2,000 acres of irrigated land. 700 acres now in alfalfa and other crops. Main canal running three miles through place. 450 Short-horn and other mixed stock cattle, with 40 horses and other stock. Finest prospect for stock ranch in the West. Plenty of outside range. Mild winters and fine climate. Feed about six weeks. Ranch fenced with woven wire. 10 miles from railroad. Ranch capable of caring for 2,000 head per year and selling off 500 head per year at an average selling price of $90 per head. F. S. Stanley, 515 Railway Exchange, Portland, Ore.

FOR SALE---Montana Land IN THE FAMOUS GALLATIN VALLEY

1120 ACRES, three miles from town on two railroads: 750 acres in cultivation: decreed water rights: improvements cost over $30,000.00. An ideal proposition for stock or dairy farming. Attractive terms and prices. For full information, address **H. H. KEYES, HELENA, MONTANA**

Best Bargain in Kansas

356 ACRES, 5 miles from Emporia, all best river bottom, 250 acres fine alfalfa, balance corn, some timber, fine buildings. Owner sold over $12,000 off this place this year. Old age is only reason for selling. Price $125 per acre. Write for our list of alfalfa lands and ranches. Willis & Co., Emporia, Kan.

AUCTIONEERS

LET us sell your farm and other real estate at auction. We are making successful sales for others. CAREY M. JONES & CO., Auctioneers, 14 N. Sacramento Blvd., Chicago, Illinois.

FOR SALE, 1,000 FARMS

GOOD soil, water and climatic conditions. Good schools, churches and railroad facilities. High-class stock country. All year round grazing. Will give first purchaser in your territory selling contract, paying 75 per cent purchase price. Maps, bookiets. Write **Marbury Lbr. Co., Marbury, Ala.**

FOR SALE Rusk Co., Wis., cutover hardwood lands; wholesale prices; any sized tract, fertile clay silt loam soil, in dairy and clover belt; good markets, schools, churches, easy terms. Write for map and information. Arpin Hardwood Lumber Co., Grand Rapids, Wisconsin

SOUTHEASTERN KANSAS

IS the place to go for good homes, low prices and easy terms. Send for full information. Address The Allen County Investment Co., Iola, Kansas

Farm For Sale We have for sale three good farms which we believe are the best bargains in Weld county, Colorado, that must be sold. Write for description. Farmers National Bank, Ault, Colorado.

If You Want A Home in the best corn, clover, blue grass and fruit country on earth, send for list of 500 Iowa farms. J. E. Hamilton, The Honest Land Man, Winterset, Ia.

SETTLERS wanted for clover lands in central Minnesota. Corn successfully raised. Write Asher Murray, Wadena, Minnesota.

SALE AND RENT good improved farms, Southwestern Minnesota. Close to Iowa. Address Owner, Box 284, Mapleton, Minn.

ALL KINDS OF FARMS FOR all kinds of people. Free Catalogues. Hall's Farm Agency, Owego, Tioga County, New York.

280 ACRES, improved, Freeborn county, Minnesota, $90.00 per acre Jas. Pickett, Emmons, Minn.

Junction, Iowa 130
Oaklawn Jenny, calved May, 1906; Howard C. Chandler, Essex, Iowa 130

Heifer, Chas. Steele 105

The Peterson Duroc Sale.

A splendid crowd attended the sale of J. P. Peterson, at Herman, Neb., on October 27th, and he sold forty-one head at an average of $35.30. It was one of the good sales made in Nebraska this fall. The top was No. 14, a son of The Brave 13417, and he went to Robert Bros. & Reese at $70. He was an outstanding good pig and was a bargain at that figure. The offering was in nice breeding condition, but was not loaded with fat. It was a very satisfactory sale and Mr. Peterson was well pleased with the outcome. Col. E. Z. Russell cried the sale and was assisted in the ring by Colonels Jensen and Bross. We list below those selling for $25 and above:

0. John Hansen, Herman, Neb. $35
1. Lee Bovee, Craig, Neb. 52
2. J. B. Peek, Tekamah, Neb..... 25
3. J. T. Oberst, Herman, Neb..... 41
4. Soren Jensen, Herman, Neb..... 25
5. R. P. Witherow, Tekamah, Neb. 27
6. B. E. Oberst, Herman, Neb..... 35
7. James Lowe, Herman, Neb..... 52
8. G. F. Hurrell, Craig, Neb..... 58
9. Mike Wetson, Blair, Neb..... 35
10. W. D. Hamock, Tekamah, Neb.. 43
11. J. F. Moravee, Fontanelle, Neb. 45
12. Bert Loftus, Herman, Neb..... 31
13. H. A. Platts, Arlington, Neb.... 30
14. Robert Bros. & Reese, South Omaha, Neb. 70
15. John Jensen, Craig, Neb..... 40
17. M. C. Luther, Hooper, Neb..... 26
18. Carey Cameron, Herman, Neb... 31
19. Carey Cameron 31
20. Carey Cameron 31
21. John Cameron, Herman, Neb.... 46
22. Joseph Lyons, Herman, Neb.... 36
23. Wm. Hansen, Blair, Neb..... 34
24. A. J. Robert, Herman, Neb..... 29
25. John Patrick, Ute, Iowa..... 48
27. John Oberst, Herman, Neb..... 31
28. John Cameron 27
30. Carl Hansen 36
34. Virgil Patterson, Craig, Neb..... 25
35. Julius Ziegler, Ft. Calhoun, Neb. 26
36. A. G. Vought, Herman, Neb..... 25
37. Joe Thiefsldt, Herman, Neb..... 65
38. James Broderson, Herman, Neb. 38
40. John Hansen 56

McCullough's Poland China Sale.

The sale of Poland Chinas made by O. J. McCullough, of Clarks, Neb., at Central City, Neb., on October 28th, encountered the first real blizzard of the season. The extremely stormy day kept many from the sale and resulted in a lower average of prices than would otherwise have prevailed. The offering contained some very fine specimens, but the most of them were not as well grown and developed as they should have been to have sold to the best advantage. Thirty head were sold at an average of $27.65. Col. H. S. Duncan did the selling. Those selling for $30 or more are listed:

1. H. G. McIntosh, Alda, Neb.....$50
2. T. J. Place, Wolbach, Neb..... 40
4. C. O. Calvin, Cadams, Neb..... 37
5. Ed Hensley, Central City, Neb... 41
8. Ellsworth Ball, Albion, Neb..... 41
20. Chas. Graw, Bennington, Neb... 55
31. Wm. Glenn, Wolbach, Neb..... 34
33. John M. Belcher, Raymore, Mo.. 39
Extra Sow, Butcher & Van Noy, Central City, Neb..... 51

TRIMMING GRAPE VINES.

November is the month for this very necessary work. Trimming is work which must be done if you would have large crops of good fruit. Anyone may raise small crops of poor grapes without any attention to the rules of treatment which give the best results. But the man who is ambitious for the best results from his labor and investment must trim.

Nature produces an immense amount of wood—she overdoes the business of preparing the foundation for her crop of fruit. If this surplus wood is left it will produce small, imperfect clusters of half-sized fruit. But when by proper use of the pruning knife you force nature to concentrate her efforts, you will be rewarded by perfect clusters of large, fully-developed grapes, and those well-grown clusters will be found to total in weight twice as much as the scattered, ill-nourished bunches of the untrimmed vines.

To one who understands the growing of grapes, it is absolutely painful to ride through the country, and mark the usual farmer's vineyard. It is a wearying suggestion of unrealized possibilities—of opportunities gone to waste. For whenever a dollar's worth of grapes are gathered from neglected vines—proper care would have secured three dollars' worth. Oh, farmers and gardeners! wake up and save that possible extra two dollars.

Vines which have been allowed to grow at will for eight or ten years, need an entirely new deal. The old wood should all be cut off near the ground. Save the new sprouts which may have started from the root—or anywhere near the roots. Remember that young wood means good fruit. If there are no strong new shoots cut out the old wood anyway. The new shoots will come next spring, but, of course, you will be one season without fruit. Hence the need of saving the new shoots when you have them.

Three or four feet in length is enough to leave of this new wood. Bear in mind that the nearer the earth you grow your fruit the better it will be. If there are plenty of strong shoots leave only three. Three is enough for one root. These, when the growing season comes again, will throw out each, three or four laterals, or fruit spurs, and your vine will produce from twenty to thirty good clusters. That is enough, and you will have more fruit, by weight, than in fifty dwarfed clusters with eight or ten grapes per cluster.

In case of young vines, or vines which have been trimmed so that there is no accumulation of old and useless wood, remember the rule that the fruit laterals will come from the first three or four buds, on the new growth. Two or three stems, main stems to the root is enough, and do not let them branch out too much. Four or five branches of bearing wood to the stem is as much as you should leave. Cut away—show no mercy—clear out the rubbish. Fit the vine to the trellis. A four-wire trellis, the top of which is six feet from the ground, is tall enough.

And your vines, if properly trimmed, will, when tied up in the spring, not project above the trellis, and no more than properly fill it when spaced so as to be six inches apart. And keep them so every year, cutting the old wood without mercy and constantly conserving the new sprouts. Now this is a general outline of the way to grow grapes. And it is the only way to grow big clusters of fine grapes, that is, good and profitable crops.

WORKING FOR BETTER TEST

To the Editor of The Homestead:

A young farmer I met yesterday told me with a good deal of pride in his face and voice that the man at the creamery told him recently that the average test of his eighteen cows at the time of last testing, according to the Babcock machine, was .53. This was, as the creamery man added, the best test of any dairy which sent milk to that creamery. No wonder the young man felt a good deal elated. He was coming to see some of the results of his work for a term of a number of years.

It had taken that young man a long time to bring his dairy up to the point where the cows would test 5.53. Think what this means: a composite test of the whole eighteen cows in the dairy, and not that of some particular one or two. There no doubt were cows in that herd which alone would test 6 and, perhaps, 7 per cent. For the farmer still has some grades in his stable. So that the report speaks very well for the dairy as an entirety.

The way it was done was to get first a full-blooded bull and two or three heifers of the same quality and breed. These were introduced into a dairy of pretty good grades, the selection of a good many years. It took time and patience to work up to that standard.

Nor ought I to say that this was the standard the young man had set for himself. I am sure that he never thought, "When I reach 5.53 I will rest on my oars; that will be as high as I shall care to go." By no means. I know him well enough to know that nothing else than the very best possible, will ever satsify him.

As the calves came on that farm, they were carefully selected, only the best grades being retained for the herd. The thoroughbreds were picked out with the same care, realizing that not all animals which are eligible to be registered as thoroughbred stock are worth keeping on the place.

What a satisfaction there is in working up in this way! To see one's herd coming to be a little better and a little better every year, while still more satisfactory things seem to lie ahead, is one of the farmer's highest rewards. The dollars and cents naturally follow, and of course these are what we all like to see; and yet I do not feel that money ought to be the dairy farmer's highest ambition. That would be to reduce life to a pretty low level. It ought to be the aim of every farmer to leave the world a little better than it was when he came into it, particularly that little circle of it in which his influence is cast. That is one of the richest returns of farming.

E. L. V.

CORN SHOWS HELP ALL.

To the Editor of The Homestead:

Corn has been called "king" and it is without question the greatest of Missouri's crops; but strictly speaking the term "Agricultural Exhibit," or "Agricultural Show," would be better than "corn show." Wheat, rye, oats, cowpeas, alfalfa, clover, timothy, and a host of other products are just as much an item of successful farming and should not, and do not fail to come in for their share of attention. When we say corn show then we mean a general display of farm products.

While business men and other interested persons usually subscribe premium funds generously, premiums are not the best part of the show. The principal benefit comes from seeing the displays. One neighbor sees what another has produced, and the man who has not done so well resolves that neighbor Jones cannot beat him raising corn, wheat or potatoes, and that he will show him next year. An agricultural show where the premiums are awarded by a competent judge is a good place to go, to form ideas as to what the best really is; or, it is a good place to go to exchange old ideas for new ones. Sometimes it restores confidence in one's own locality. For instance, during the Cape County Fair, numerous visitors remarked that they never thought it possible for such corn and wheat, clover, alfalfa, and other crops to grow in such a season as the present one had been. Every one went away feeling better.

Such an exhibition besides being a great object lesson and a great booster for better crops often serves as a sort of clearing house for good seed. Many a bushel of good seed corn and wheat has been bought or sold at a grain exhibit. Whenever we have an opportunity to brush up against our neighbor we usually learn something, and, no doubt, the same rule applies to him. The benefit is not purely individual, for whole communities often are better for it.

Only four years ago the little village of Appleton, Mo., held it's first corn show. There were exhibitors in plenty who thought that the longest ear of corn was the best, no matter if it had only ten rows on it. They didn't think much about the per cent of corn to cob, of maturity, uniformity and a host of other important points. In the short space of time that elapsed since that first show things have changed materially. The visitor at their show will now find nothing but first-class entries. Entries from Appleton were conspicuous winners at the larger shows in Jackson and Cape Girardeau last year. The same is also true in their livestock classes, where neighbor competes with neighbor and all are benefited. The man who used to say, "I've got twice as good stuff as that at home" is finding that his audience isn't very appreciative.

This is the season for the fall shows and there will be many of them during the next three months. Make up your mind now to exhibit one or several things. Whether or not you get a premium you are sure to be the winner in the long run.

C. M. McWilliams.
"County Man," Cape Girardeau Co., Mo.

REMOVING THE OLD BARK.

There are various ways of fighting insect pests, such as spraying, destroying the rubbish in the orchard, picking the egg covers from the trees, and scraping the trees to remove the insects hiding in the old bark. When apple trees get old enough to accumulate old dead bark, its capacity for concealing insects becomes enormous, and the numerous cracks, fissures, and crevices are ideal places for the deposition of eggs.

When the growing season is ended and the trees are at rest is the right time to destroy these traps of the enemy. You may do it by scraping the tree, and so removing all decaying bark, and with it all the seeds of future mischief.

You should get your blacksmith to make you a scraper with a curving blade to fit the shape of the tree trunk. Of course, any strong, heavy knife blade will do the work, but the more suitable the implement the more rapid the work.

Spread an old sheet about the tree trunk, to catch the scrapings, for these must be burned to destroy the eggs and dormant bugs and worms. Scrape all the crevices thoroughly, but not in such a way as to injure the new bark.

Go over the entire trunk of the tree, and carry on the work upon the main branches, especially where layers of dead bark in the crotches furnish ideal shelter for the foe.

The old decaying bark is never found upon the smaller branches. Examine any old apple tree, and note the mass of rough, broken bark, and then think, if you can, of any possible better breeding place for the insect enemies of the fruit.

It is estimated that by removing this and destroying it, with the hosts of eggs which it carries, we can lessen our insect troubles for the coming season by at least one half. And not only do we remove 50 per cent directly, but we render the remaining nuisance, 50 per cent, such as we cannot quite get at, more liable to our spraying efforts. We make it so that the poison can reach it.

The worms hidden by the old bark are like an enemy in ambush. We may shoot in the general direction, but, not seeing the foe, we are not likely to hit him. But if his cover is removed we can spot him. Let it be understood that this method of insect fighting only applies to old trees. Trees only eight to twelve years old have smooth bark and there is nothing to scrape away, consequently no hiding place for the foe. So this rule applies only to the old trees. And yet there is something to do for the man who has only young, smooth-barked trees in his orchard. Let him take his stepladder and go over the treetops and pick off all the leaf tufts, which are clinging there. They will be found to be glued together, and are practically tents, shelter tents for the insects, which will emerge from those germs to feed luxuriously upon the tender buds and young fruit of next May.

When you have done this, do not think that you have done all. But in March cut strips of sticky fly paper and tie them about the tree trunks about three feet from the ground. Tie them in such a way that the sticky side will be down and the strip light at the top and loose at the bottom. This makes a trap which will catch the curculio and other bugs and worms as they ascend the tree. They will gladly crawl under this sheltering strip, making it a sure death trap. That none may find an exit upward, put a little loose, soft grafting wax about the upper edge of the paper.

There are various modifications of this plan. Some use only strips of cloth, and others only soft grafting wax. But we like the fly paper.

FIELD NOTES.

On page 41 K. Brunia, Pella, Iowa, Offers for sale genuine Welsh and Shetland ponies.

C. F. Goodsell, Canby, Minn., has an advertisement on page 22 of this issue offering Scotch Collie puppies for sale.

E. Crabs, Aledo, Ill., can supply Duroc Jersey boars and gilts at reasonable prices as per his announcement on page 47.

For Tamworth swine of prize-winning blood lines write C. C. Roup, Kalona, Iowa, as per his advertisement on page 46.

A big-type Poland China boar pig of excellent breeding can be purchased of B. F. Marmion, Farmington, Iowa, at farmers' prices. See page 45.

F. T. Quire, Sully, Iowa, can supply Hampshire boars of the same breeding as his silver cup winners at Des Moines in 1912 at $35 each. See page 44.

J. B. Heisel, Grinnell, Iowa, is making special prices on Poland China boars and gilts as well as 1913 fall pigs on page 45. Write him your wants.

A registered Red Polled bull, two years old, is offered for sale by K. Brunia, Pella, Iowa, whose advertisement will be found on page 43. A reasonable price will be quoted.

A good two-year-old and a yearling Percheron stallion are advertised for sale by H. D. Clore, Lucas, Iowa, for $1,000 for the two on page 41. He also offers some good Hereford bull calves for sale.

McCullough & Tumbach, 138 N. Main St., St. Louis, Mo., advertise on page 15 that they pay highest prices for furs and furnish free price list and shipping tags. Write to the address named.

Immune Chester White hogs are advertised for sale by C. F. Sealock, Neola, Iowa, on page 46. He offers a good yearling for $40 and spring boars for $25 each. Write him your order at once.

Nicely bred and good individual Berkshire spring boars are advertised for sale by Fred Divelbess, Logan, Iowa, on page 43 of this issue. These animals are cholera immune. Write Mr. Divelbess for prices.

John I Dripps, Springville, Iowa, is offering yearling and two-year-old Shropshire rams and a fine lot of big-type fall and spring boars of the best big-type Poland China families at the right kind of prices. See page 44.

For Duroc Jersey boars of prize-winning ancestry write M. E. Merfeld & Sons, Greene, Iowa, as they have bought nothing but descendants of prize winners and can supply that kind to their customers. See page 46.

Howard Niswander, Kinross, Iowa, is in position to supply really high-class Hampshire boars sired by Messenger Boy, Dudie and others to those in need of this class of stock. His prices are right and he has the goods. See page 44.

Menaugh Bros., Gardner, Ill., have a fine lot of Duroc Jersey boars of spring and fall farrow for sale. They also have Polled Durham bulls and heifers of the most approved Scotch breeding that they are pricing very reasonable. See page 47.

J. A. Beaumaster, Elma, Iowa, has a fine lot of big-type, heavy-boned Poland China boars of spring farrow sired by Long King by Long King's Equal and O. Wonder, a grandson of A Wonder. Write him for prices. See advertisement on page 45.

Galvanized or painted roofing like that illustrated in the advertisement on page 9 is sold to readers of this paper direct from the mills at mill prices. A free sample and price list may be obtained by addressing a request to the Sykes Metal Lath & Roofing Co., 520 Walnut St., Niles, Ohio.

J. H. Cope, Carlisle, Iowa, advertises on page 40 that he wishes to sell a few Poland China spring boars and to sell them quick. They will weigh 250 pounds or more, are in perfect health and much better than average pigs that will be sold at the prices he quotes on them. Mr. Cope wants to get them out of the way of his fall crop of pigs and for that reason will make prices that cannot fail to interest buyers. He has recently purchased a new herd boar from Marshall, of Monroe. This is a spring pig by Giant King, dam a Jumbo sow. The pig is one of size and has quality as well. Mr. Cope looks for good results on his high-class brood sows. For prices on pigs above referred to write to J. H. Cope, Carlisle, Iowa.

Did you write J. F. Kerns, Holstein, Iowa, for one of those immune Duroc Jersey boars he is advertising for sale on page 47? He is pricing them at $25 and $35. Send him an order at once and mention The Homestead.

Did you order one of those big, lusty, big-boned Poland China boars from James Cockerton, Whiting, Iowa? He offers twenty head of big, spring boars and a splendid yearling that will make a 1,000-pound boar when matured. Read his advertisement on page 45.

Profit Farm Boilers which are advertised on page 9 have been in use for so many years that they have become a necessity on well-regulated farms. Particulars concerning them may be obtained by writing for circular P, addressing request to D. R. Sperry & Co., Batavia, Ill.

One November 11th, Hugh M. Ficke, Long Grove, Iowa, will sell thirty-six Duroc Jersey boars at public auction. Mr. Ficke breeds for size, heavy bone and smoothness and he will sell boars in this sale as large as you will find anywhere in the country. See advertisement on page 46.

Slingerland's Correspondence School of Music advertised on page 26 provides musical education on the violin, cornet, guitar or other instrument. For particulars with reference to the free instrument write to Slingerland's Correspondence School of Music, Dept. 44, Auditorium Bldg., Chicago, Ill.

August Post, Moulton, Iowa, advertises Poland Chinas on page 44. He is offering fifteen boars and fifteen gilts of spring farrow which are the tops of his season's crop of fifty head. In order to reduce the number on hand quick, he will make some remarkably low prices. See advertisement and write to the address above given.

In a new advertisement on page 40 H. Crabtree informs our readers that he has sixty head of Poland China pigs of both sexes of April farrow and that he will sell them at very reasonable figures. These pigs are cholera immune, having been vaccinated, and are in perfect health and thrift. For prices write to H. Crabtree, Baxter, Iowa.

H. F. Funke, whose advertisement of Short-horn cattle has been a prominent feature in our columns, recently advises us that he has now sold all his cattle except two cows and one bull. These are described in the new advertisement on page 43. They will be sold at very reasonable prices in order to clear up the lot. Address inquiries to H. F. Funk, Greenfield, Iowa.

I. J. Wilson, West Branch, Iowa, is offering to sell boars sired by Wilson's Crimson Wonder and out of sows sired by Wilson's Defender, a litter mate to the grand champion, Disturber, at $25 each while they last. Mr. Wilson guarantees satisfaction and if you send him $25 for a boar you will get your money's worth. See page 46 and when writing kindly mention The Homestead.

Twenty head of big-type Poland China boars are offered for sale by J. M. Sheehan, Stuart, Iowa, who advertises them on page 40. These pigs are of popular lines of breeding, their sires being Long King Wonder, Long King's Equal, Sterling Giant and Choice Look. Much size may be expected from these pigs because their dams are 700 and 800-pound sows. Reasonable prices will be quoted on them.

Florida East Coast Railway traverses the most desirable portions of that state and encourages the settlement of farmers who are interested in fruit growing, trucking, poultry raising, bee keeping, and like departments of farming. A new book giving a great deal of information entitled "Facts About Florida" may be obtained without charge on application to Louis Larson, Room 122, 109 W. Adams St., Chicago, Ill. See page 32.

Orlando Jacobs & Son, New London, Iowa, write as follows in regard to their Berkshires: "The Berkshire boars and sows we offer for sale are as well bred as will be found and are a nice, thrifty lot. They have been fed with a view of developing stock for breeding purposes and will weigh 140 to 200 pounds. They carry no surplus fat and are in a condition to do the buyer good. We believe they will please." See advertisement on page 43.

Singmaster & Walker, Sioux City, inform us that they are having good sales, among the more recent ones being a fine two-year-old draft stallion to a South Dakota farmer and a pair of Percheron mares to an Iowa farmer. They have some extra good stallions and mares at Sioux City, many of which were imported as yearlings. For this reason they can make prices less than if they were imported at a mature age. See page 42.

We desire to call attention of readers of this paper to the advertisement of Hart Bros., Osceola, Iowa, on page 41, who are among the best known importers of Percheron and Belgian Stallions and mares today in the West. Their fall importation arrived on October 8th, and were personally selected by Warren Hart, and if he ever bought a good string of horses he certainly got them this time. The Percherons are all blacks and grays. While the Belgians are roans and bays, and everything they brought are two year olds and some of these will weigh 1,900 pounds. These horses have the size, bone and quality that the trade is demanding and you will find some especially good horses in this importation. Two very excellent Belgian stallions are sired by the great horse, Paul, that was champion at the Brussels show. This importation is a strictly choice lot from one end to the other. In fact we have never seen a better lot of horses in their barns, and now is a good time to go and see them. Their prices are low enough that anybody can buy and if you are going to want a stallion it will pay you to go and see these horses right away. In corresponding with them kindly mention this paper.

The application of oil to the purpose of tank heating is the unique method employed by the Positive Supply Co., whose advertisement appears on page 29. It is claimed that by this method water may be kept at a proper temperature at less than one-half cent an hour. Another feature of importance is that the heater runs day and night and needs no watching. An illustrated circular describes it fully. Address Positive Supply Co., 405 Rock Island St., Davenport, Iowa.

Farmers or breeders of Berkshire hogs will be interested in the announcement of M. A. O'Brien, which appears on page 43 of this paper. That gentleman has for sale some high-class boars weighing from 135 to 200 pounds, which he will dispose of at the remarkably low price of $20 to $35 each. These are the select pigs of the season's crop, because the inferior ones were sent to market where they captured the top prices of the season. For information address M. A. O'Brien, R. 2, Reedsville, Wis.

Goods made by the Kalamazoo Carriage & Harness Co. have met the requirements of farmers everywhere. Just now a novelty in the way of a sleigh is offered for sale and illustrated in the advertisement on page 12. It has the finish and style of an automobile with side doors and luxury body. Better than that is the fact that it is sold at a saving of from $5 to $20 over an ordinary sleigh. Before buying it is well to obtain a catalog which describes it in full. Address Kalamazoo Carriage & Harness Co., Department IH., Kalamazoo, Mich.

The Shamrock herd of Chester White hogs advertised on page 46 is offering for sale an excellent line of spring boars. The herd is headed by St. Patrick 22353, a hog of unusually good lines of breeding. His dam, Lady Perfection, was an Iowa State Fair winner in 1911. The brood sows are of good lines of breeding, have size, good strong backs with finish and quality. These pigs are recorded in the American Chester White Record Association and sold under a guarantee that the purchaser will be satisfied. For prices or additional descriptions write to L. I. Handlon, R. F. D. 3, Farmington, Iowa.

C. & C. T. Van Lint offer for sale a bunch of eight Short-horn heifers that should not remain long unsold at the prices at which they are offered. The Messrs. Van Lint have been breeding Short-horns as a pure, money-making farm transaction and the cattle now offered for sale are the kind that have been making money for them many years. The only reason for their sale is that this herd has outgrown the capacity of the farm to provide for them. They are all of producing age and right in every particular. Descriptions may be learned by writing to C. and C. T. Van Lint, Pella, Iowa.

It is not often that a good, old, standard Poland China herd like that of M. G. Arnold & Son announce cut prices on boars, but the crop of fall pigs is becoming so numerous that forty boars weighing from 150 to 300 pounds will be sold at half price if taken soon. These boars are by Orange Boy, a thousand-pound hog of the most popular big-type breeding. The dams are equally as well bred and of the sort which have made the Arnold herd famous the world over. Pigs will be sold at from $20 to $25 each, which is remarkably low when the size and quality are considered. Satisfaction will be quaranteed or pigs will be shipped on approval to responsible buyers. See advertisement on page 45 and for further descriptions write to M. G. Arnold & Son, Strawberry Point, Iowa.

W. F. Drummy, Ryan, Iowa, informs us that he has for sale an October, 1912, pig by Drummy's Col., dam Empress Queen, that is a grand animal with length, heavy bone, extra strong feet and all the make-up of a high-class herd header. He only asks $50 for it. He also has a February, 1913, pig of the same breeding that he will sell at $40. Mr. Drummy says: "I have forty March and April pigs of choice strains. Some of them trace to the herds of Menaugh Bros., Harding & Son, W. S. West and W. A. Cottingham. They are sired by Drummy's Col., Illinois Chief, Supreme Goods, Cherry Prince and Superba Junior. These pigs are long, heavy boned and of a nice cherry red color. I have spared no expense in getting the best breeding stock and now offer very high-class pigs to my patrons." See advertisement on page 47 and address inquiries to W. F. Drummy, Ryan, Iowa.

At the 1913 Illinois State Fair the display of draft horses was one of the best ever seen at any state fair, all breeds being strongly represented. No breed came to the front any better than did the Clydesdales, a fine lot of horses of the popular Scotch pattern being shown. The Lafayette stud, of John Leitch & Sons, Lafayette, Ill., was the prominent factor in the success of this show. They exhibited twenty head of as good Clydesdales as any firm can show. The ribbons were tied by the veteran Clydesdale importer and breeder, Alex Galbraith, and when the show was over Leitch & Sons had captured first, second and fourth on aged stallions with Strathbaun, Regal Style and Benwell; first and fourth on three year old with Craibstone and Gold Leaf; second on two year olds with Monarch; first, third and fourth on

aged mares with Parkend Beauty, Jess of Hartbush and Pride of Avondale; second and third on three year olds with Jean of Fairfolds and Augusta; first on best five stallions, and their grand mare, Parkend Beauty, was made champion of the show. Leitch & Sons are easily the largest Clydesdale importers in the country, and they secure the best that money and experience can buy on the other side, so that they are always in shape to show to intending buyers a choice lot of horses. See page 41.

In a recent letter ordering the change in his advertisement, H. S. Allen, Russell, Iowa, says: "To the Duroc Jersey breeder in need of a herd boar I want to say that I have two of the greatest prospects that can be found in the West. One of them is a first-prize winner in the under-year class at the late Nebraska State Fair. His sire is Crimson Wonder Again, his dam Missouri Lady by Valley Chief, he by Ohio Chief. The second dam is Missouri Girl, the dam of the noted H. A.'s Queen. This boar and his three litter sisters won six first prizes, two seconds and one sixth and were one of the most sensational litters ever seen at the western fairs. The boar is one of the most royally bred animals in the country and has a show record to back his pedigree. He has strong masculine character and every attribute of a good sire. He will be priced worth the money. The other boar is a spring yearling sired by Crimson Wonder Again and out of the great brood sow, H. A.'s Queen. These two will be priced worth the money. Both are cholera immune. I have also a bunch of big, heavy-boned farmers' boars to be sold at reasonable prices." See advertisement on page 40 and write to the address named for other information

A Market for Your Furs and Hides.

On page 15 of this issue appears an advertisement of the La Crosse Fur & Hide Company 18-20 South Front Street, La Crosse, Wis. This concern buys all kinds of furs as well as beef hides, horse hides and sheep pelts and claim to pay good prices. To our readers who are interested we would suggest that they write this company at the address given.

Immune Poland China Boars.

Those of our Poland China friends who want an immune boar should consult the advertisement of C. H. Porter, Eagle Grove, Iowa, on page 44 and write him your order. He is offering forty-five head of good boars, all vaccinated and immune and he is pricing them at from $30 to $50. Write him or go and see these boars and you will be sure to buy.

Davenport & Mack Offer Poland China Boars.

Davenport & Mack, Belmond, Iowa, are advertising some good Poland China boars for sale on page 44. They are of the large type, are heavy boned and of the kind that will please the breeder or farmer who wants to raise a profitable hog. They are mostly sired by Big Wonder and out of sows by Jumbo. Write them your wants, mentioning The Homestead.

Martin & Son's New Collie Farm.

A. A. Martin & Son, formerly of Lincoln, Neb., will from now on be located at Tekamah, Neb., and they are making a special removal sale on a fine lot of Collies. These gentlemen breed as fine a strain of high-class Collies as will be found anywhere. Their stock are noted winners and from the best imported stock. It will interest those that have had an idea of buying to get these special prices. Write A. A. Martin & Son, Tekamah, Neb., for full particulars.

McKerg's Short-horns.

Geo. W. McKerg, Marengo, Iowa, offers eight ten-months heifers at $100 each. He also has a few yearling and two-year-old heifers for sale and three yearling bulls. A Homestead representative has inspected these bulls and heifers and can commend them to anyone looking for low-down, thick, beefy heifers or bulls of good blood lines. The sire of this sale stuff is Royal Guide by Narcissus King. Part of the heifers are Scotch and the balance have five or six Scotch tops. See page 40 and write for prices.

Funke Offers Short-horn Herd.

The greatest opportunity we know of to buy a few select Short-horns is offered by Henry Funke, Greenfield, Iowa, on page 43. He has sold out his farm and must sell his small but select herd of Short-horns and this is the greatest opportunity we know of to buy a Scotch herd. You cannot possibly go wrong in buying this herd as everything is of the very best Scotch families and not a poor individual in the lot. Get busy if you want this herd and go and see Henry Funke at once. When writing him kindly mention The Homestead.

Pederson's Immune Poland Boars.

With this week's issue we begin the advertisement of C. M. Pederson, Dunlap, Iowa, who is offering twenty-five head of immune Poland China boars for sale and he has some very good ones. These boars were all vaccinated with the double method and are, therefore, cholera immune and can be shipped into any herd no matter what the conditions may be. In a recent letter from him he says: "My boars are all immune and I have some extra good ones. I am offering four good fall boars for sale and one of these is an extra good one and he was a winner of first prize at the Crawford County Fair and I am pricing him at $50 and the first man that sends a check gets him. He is sired by Golddust Wonder and in out of Large Tecumseh, a granddaughter of old Long King, and Chief Tecumseh 3d. Another right good one is sired by the same hog and is out of the grand brood sow, Miss Monarch, that actually weighed in breeding condition 800 pounds on my scales. These boars have good backs and the best of feet and legs. I also have twenty big, stretchy spring boars, mostly sired by Golddust Wonder, Long Orange and Defender Again Pride. I am pricing these at from $25 to $35 and the first man that comes or sends his order gets his pick of the bunch." Write Mr. Pederson at once about these boars and mention The Homestead. See page 40.

An Aid to the Housewife.

We desire to call the attention of our readers to the advertisement of the Enterprise Meat and Food Chopper which appears on page 26 of this issue. Every housewife experiences many perplexing problems in preparing the meals, for the human family demands a variety. The food and meat chopper goes a long way in solving this problem and the meals are easier and quicker to get. At butchering time it takes care of the sausage meat. We suggest that our readers look up the advertisement and write the Enterprise Mfg. Co., of Pa., Dept. 83, Philadelphia, Pa.

Cagwin's Husker's Liniment.

Corn husking during any season is hard on the hands, but it is reported this year that the corn is rougher than usual, and this coupled with the frosty weather of unusual severity right at this time is the cause of many corn-roughed hands among our readers. We desire to call attention to the advertisement of J. E. Cagwin, of Ames, Iowa, which appears on page 15 of this issue and suggest that our readers send for some of the goods. This liniment is manufactured in the center of the corn belt to fit conditions found here, and the large sale which it enjoys at this time speaks well for its merits.

W. H. Cooper, Livestock Auctioneer.

W. H. Cooper, Hedrick, Iowa, is well known throughout the corn belt as a popular livestock auctioneer as well as one of the best breeders of big-type Poland Chinas in the middle West. Mr. Cooper has an extensive acquaintance among breeders of pure-bred livestock and from actual experience has gained a thorough knowledge of the breeding of pure-bred livestock. Mr. Cooper is not a man who does things in a theoretical manner and omits the practical side. He has the best equipped farm for the breeding of pure-bred swine which this Homestead representative has had the pleasure of visiting. It is practical in every particular and every-convenience for the hog's comfort is carefully looked after. It is such a man that can render most excellent service as an auctioneer in any pure-bred sale. The fact that Mr. Cooper's auction business is growing from year to year is excellent evidence that his services please his patrons. If interested in the services of an auctioneer write Mr. Cooper in plenty of time as his dates are booked early. On February 4th, Mr. Cooper will hold a sale of big-type, cholera-immune sows bred to his famous big-type boars. Write Mr. Cooper for a catalog and any other information you may want, kindly mentioning The Homestead. See page 44.

Hollingshead's Great Sale.

On Tuesday, November 11th, at Chariton, Iowa, R. C. Hollingshead will sell one of the greatest Poland China offerings of the year, and those of our readers who have not as yet bought their boars will find in this sale some of the greatest young boars that have been listed for a public sale this fall. He is selling thirteen head of fall boars that for size are hard to beat. He is also selling a grand good lot of fall sows and we will say in all candor that we have not seen such an array of fall sows in any sale this fall as he will offer in this sale. You cannot afford to miss this sale if you are on the market for a boar or a few choice sows. Our M. T. White will attend this sale in person and will care for any bids sent in his care.

Kreischer Offers Bargains in Polands.

E. W. Kreischer, Mt. Vernon, Iowa, has one good September yearling boar sired by the noted Mastodon Chief that he will send to the first man who sends him a check for $45, and if the buyer is not pleased he can return the hog and get his money. He also has one yearling boar of the herd-heading sort sired by Mastodon Chief that weighs over 650 pounds in breeding condition. Fifty dollars will buy this hog. He has thirty boars of March and April farrow weighing from 175 to 225 pounds in nice growing condition that he is pricing at $25 each. Mr. Kreischer desires that anyone in the market for a boar send him a check for $25 and he will send the boar. If the purchaser is dissatisfied he can return the boar and get his money. Every hog on the farm has been treated with the simultaneous method and is immune from cholera. The spring pigs are sired by the famous 1,000-pound Mastodon Chief, the boar that was at the head of Mr. Kreischer's herd until the boar died last summer. There are also some by Big Jumbo 2d, a son of the famous Big Jumbo, and also a few by the best boar that Mastodon Chief ever sired. He is nineteen months old and weighs 700 pounds in fair condition while his dam was an 800-pound sow sired by A Wonder. Mr. Kreischer is making these attractive prices in order that he may have room to give his fall pigs good care and also that he may have more time to prepare his sows for the bred sow sale on February 5th. See page 44 and send Mr. Kreischer your order. You will receive fair treatment.

Weberg Offers Duroc Boars.

On page 10 P. W. Weberg, Denison, Iowa, is offering some special bargains in Duroc Jersey boars for the next thirty days. He offers three very choice spring boars that are sired by his noted grand champion boar, Crimson Wonder III., and out of a Defender dam, and he also offers a lot of boars that are sired by the 1,000-pound C. H. Special, Col. Gano and other noted sires. Mr. Weberg says for us to say to Homestead readers that he not only has a great string of boars on hand, but that he is pricing these where they will sell, and if a man will only go and see him he will be sure to buy a boar. He also has a number of good fall boars on hand that are sired by C. H. Special. Don't delay this matter, but go and see these Weberg boars at once. Kindly mention The Homestead when writing him.

Warp Bros. Now Offer Bred Sows.

Without question, one of the greatest opportunities that will be presented this season to get an extra big, extra good Poland China bred sows at reasonable prices, is now being set forth by Warp Bros., Minden, Neb. These gentlemen have one of the very best herds of big sows and gilts that the writer has any knowledge of. They are sired by two boars, their equals are very scarce. One of them was Roesler's Giant, by Long Chief. The other was Old Reliable by Long King. Roesler's Giant was the best boar raised by Thos. F. Miller three or four years ago, and he first went to the head of the A. Roesler herd at Wilcox, Neb., he was later purchased by Warp Bros. and used two seasons. He was a boar that stood forty inches high and weighed in ordinary farm flesh right at a 1,000 pounds. He sired a boar that was shown the past season at the Nebraska Fair, weighing as a two year old, 1,010 pounds on the fair grounds. He was the heaviest two year old ever shown at Nebraska. Most of the brood sows on the Warp place are sired by him. These sows were bred to Old Reliable and we want to say that outside of Long King's Equal, he was the best son of Long King that we ever saw, and as a breeder he is the equal of any extremely big boar we ever came across. Sows of this sort, the extra big, deep, long sows are now for sale and will be sold bred to A Columbus, an extra good son of the champion Coulmbus, or either to Bonapart, a son of the 1913 champion, The Big Orphan. It seems that this sort of stock should meet with a ready sale. Certainly nothing better is to be found in the West, and only few herds offer such attractions. We would urge ordering without delay. See advertisement on page 40.

Koenig's Duroc Jersey Offering.

H. H. Koenig, DeWitt, Neb., is offering choice Duroc Jersey boars sired by the great Golden Model 2d, also Echo's Chief, King's Wonder and Red Model. These are all boars of note, and should attract attention. Red Model is sired by Golden Model and has proven a good sire. King's Crimson was the top boar in the Beem dispersion sale and is a really good boar. Echo's Chief is of Van Patten's breeding, which should be sufficient to commend it. Mr. Koenig has none but good brood sows on his farm, for he is very particular concerning his breeding stock, hence the boars now for sale are, and of a right should be good. If interested, write at once and kindly mention The Homestead. See page 47.

C. B. Powers Immune Poland China Sale.

On November 12th, in the sale pavilion in Aurora, C. B. Powers of that place and one of the best and most favorable-known Poland China breeders within the state will offer forty-five immuned Poland China boars and gilts. These are the get of Again Expansion, one of the greatest boars ever produced in Nebraska, also some by Big Bone, he by T. A. Sampson and out of a daughter of Long King. These boars have established reputations as sires of the big stuff, and they were big also. Again Expansion was a late pig, farrowed in May, yet he went to the fair as a junior yearling and won second, and was larger than the March boar shown against. Big Bone is one of the extremely big sort, and, as his name implies, is extra heavy boned. In the sale that will be made on November 12th there will be offered a few boars really choice enough to head the very best kind of pure-bred herd. We make this statement advisedly, and know whereof we speak. Many might say they were all herd headers, and probably the most of them are, but at least a few are outstanding. The gilts are also good, and as they are immune, they will be good stuff to tie to. This sale was only thought of on very short notice, and as it will be advertised very little, there will probably be no big outside crowd, and bargains are sure to be plentiful. We would just suggest that those that can use something good attend this sale, for we are convinced in advance that it will be the bargain sale of the whole season. J. C. Price will be on hand at this sale, representing The Homestead and bids may be sent to him in care of Mr. Powers. See advertisement on page 40.

Merrick's Good Durocs.

Probably as good boars are now for sale in the state, are offered by F. E. Merrick, Osceola, Neb. Merrick has no great number, something like a dozen, but they are as good as only the best of the spring crop were saved for breeding purposes. They are all of good breeding, being sired for the most part by a son of Belle's Crimson Wonder and by Golden Rod Hero. The first named boar is a good sire, has turned out a lot of good ones and they breed on. The latter boar is by Golden Model and out of the famous producing sow, Miss Hope. He is one of the best Golden Model boars we know of and he is making a record as a sire. Homestead readers in search of something good will find what they want in Mr. Merrick's herd and at a right price.

Wilkinson Importation Coming.

H. P. Wilkinson, who is at the present time in the old country in the interest of the firm of H. P. Wilkinson & Son, at Mitchellville, Iowa, writes us from Rugby, England, saying: "I have been in France and England buying Shire and Percheron stallions and mares. I am leaving Tilbury Dock, London, with the best lot of horses that ever went to the states. I have been a prize winner at the best shows in England." Messrs. Wilkinson have usually had for sale horses of the very best character and the addition of the lot mentioned in the above note will make it worth while for buyers to investigate the new importation. The Messrs. Wilkinson do their own buying and their own selling and have no profits to divide with anybody. The importation leaves London for New York on the 7th of November. As soon as the new horses are comfortably settled on the farm further announcements will be made in these columns.

Choice O. I. C. Boars at $22.50.

With this isue of The Homestead, Wm. Buehler, Sterling, Neb., is starting an advertisement in which he offers readers of this paper some decided bargains. He is naming the very low price of $22.50 on the choice of ten early spring boars that will weigh from 225 up to 250 or more. These boars are all of good breeding. However, a few cannot be recorded as he has lost the pedigree of the dam. But the remainder of them are eligible to record and the same price prevails on the whole bunch for choice. He is naming absolutely bed rock prices, because he wants to sell them immediately. Mr. Buehler is a good stockman, and he buys none but the very best breeding stock. At the public sales over Nebraska the past few seasons, he has bought or been a contending bidder on the very best of the offerings. Readers that are interested will certainly be able to do no better and we would urge ordering immediately. See the advertisement on page 40.

Special Bargains in Holsteins.

On page 40 you will find the advertisement of the Rock Brook Stock Farm, Omaha, Neb., who is offering forty head of Holstein-Friesian cows and heifers, ranging in age from three to six years, all fresh or springing. These cattle were originally intended for their sale some time ago at South Omaha, but they failed to arrive in time, and now that he has them on hand he wishes to close them out within the next two weeks. He is pricing these from $75 and up and they are certainly great bargains at these figures. These are very choice Holsteins and there are some splendid milk cows among the number. If you are going to want some good Holsteins it will pay you to go and see these cattle right away. Mr. Glissman will be at home for the next two weeks and if you will only see him before he gets away you will be able to buy these cattle at prices that will astonish you. When corresponding with him kindly mention The Homestead.

Harry Dodds' Last Call.

In last week's issue we gave a detailed description of the Poland China offering that H. F. Dodds will sell at Florence, Neb., on November 13th, and we just want to again emphasize the importance of attending his sale. This sale, remember, will be held on November 13th, at the feed yards in Florence, Neb., and he is going to sell one of the most representative offerings of the fall season. Many of the good things in his sale will be sired by his noted herd boar, I Am Big Too, the sire of the great Nebraska State Fair winner, Futurity Jack. This hog has been noted as one of the good breeding boars in the state of Nebraska and he always sires the good ones that the breeders are all after. Some of the very best spring and fall sows in this sale will be sired by him also some of his best show and breeding sows are daughters of this great breeding boar. The best fall boar he is selling is Dodd's Best and he is a son of this boar and is out of the great sow, Victress, who in turn is a daughter of the noted boar, Big Victor. In brood sows he is selling Show Girl, a daughter of I Am Big Too, and

NEXT WEEK'S SALE PROGRAM

Tuesday, November 11	Poland Chinas, R. C. Hollingshead, Chariton, Iowa.
Wednesday, November 12	Poland Chinas, H. F. Dodds, Florence, Neb. Poland Chinas, Mrs. August Gorder, Plattsmouth, Neb. Poland Chinas, C. B. Powers, Aurora, Nebraska.
Friday, November 14	Aberdeen Angus, Marion C. Stone, Kansas City, Mo.

she was one of his greatest winners this fall at the fairs. He is also listing three spring boars by the undefeated boar, Columbus, and also four very choice spring gilts by the same boar. These will undoubtedly be sought after by the best breeders because they are all right and will make money for any man that buys them. It is unnecessary for us to go on and enumerate the entire offering as we gave a detailed description in last week's Homestead. We will say, however, that Harry Dodds is selling a splendid lot of Poland Chinas and it will be a good sale to attend. Write him at once for catalog and be sure to go to his sale. M. T. White will represent The Homestead at the sale and will look after any bids sent in his care. See advertisement on page 41.

The Economy Duroc Sale.

The Duroc Jersey sale made by the Economy Stock Farm, at Shenandoah, Iowa, on October 29th, was well attended and they made an average of $47.50. The sows they offered bred to Big Wonder, their Iowa State Fair grand champion boar were eagerly sought after and they sold at an average of $102.50. The top was Miss Col., a daughter of King the Col., and she was purchased by S. W. Swanson, Red Oak, Iowa, at $175. He also secured a choice gilt at $75 and V. L. Gaston got another at $77.50. Mr. W. R. White, Mabton, Wash, got one of the greatest sows in the sale in H. Blazes at $150. This is a litter sister to their third-prize Iowa State Fair sow, and she was regarded as one of the great bargains in their offering. Mr. Swanson also secured Miss Gano at $77.50 and Peter Hopley & Son, Lewis, Iowa, got Queen Blazes at $85 and Velsep Queen at $77.50. The old boar Highland Chief, was purchased by V. L. Gaston, Malvern, Iowa, at $177.50 and Top Col. went to E. O. Pete, Shenandoah, Iowa at $60. Col. Nelson G. Kraschel cried the sale and did splendid work.

DeYoung's Duroc Boar Bargains.

In a recent letter from A. J. DeYoung, Sheldon, Iowa, he says: "I have a grand lot of Duroc Jersey boars on hand and they are doing fine. These are all vaccinated and immune, and I am closing them out at farmers' prices. I have some extra good boars for sale that are sired by my great breeding boar, Big Bone Climax, and these will certainly make great boars. I recently received a letter from a breeder in South Dakota that bought a Big Bone Climax boar from a breeder that secured a sow at my sale and he says he is the best boar he ever saw. You can just say to Homestead readers I have a number of boars on the place and for sale that will be just as good if properly cared for. I recently bought of W. N. Shanks, Worthington, Minn., a great fall boar sired by Crimson Wonder Again, and he ought to be a great held to King of Cols. Again and Big Bone Climax, and with these three great boars I will certainly be able to furnish the breeders what they want. Just now tell Homestead readers to write me about these boars I am offering for sale." When writing Mr. DeYoung kindly mention this paper. See page 47.

Hopley's New Importation.

The well-known firm of Peter Hopley, Lewis, Iowa, have arrived home with their first importation of Percheron and Belgian Shire stallions and mares, and the horses are now quartered in their barns where they can be seen at any time. They have another importation of Percheron and Shire mares coming, and these land about the middle of November. They have a grand good lot of stallions in their barns just now and will take pleasure in showing them to intending purchasers. These horses were personally selected by the senior member of this firm, Peter Hopley himself, and there isn't a better judge on either side of the water. The firm of Peter Hopley & Son have built up a reputation for handling a high-class lot of horses, and they do not import any other kind. Among the Shires they brought with them is a three year old that they bought from the association that paid $10,000 for the use of the great horse, Tatton Dray King, and this is a great colt. They have a Belgian in the barns that is regarded as one of the best that was brought over this year, and also some splendid Percherons. Make it a point to visit their barns and personally inspect these horses. When writing them kindly mention this paper.

J. W. McDermott's Short-horn Sale.

Short-horns that merit the attention of those interested in good cattle are listed for sale on Tuesday, November 25th, by J. W. McDermott, Kahoka, Mo. In this annual draft ten bulls, fifteen cows and fifteen heifers are listed. Mr. McDermott has used the good breeding bull, Fair Goods, one of the best sons of Choice Good and the great show cow, Ruberta, for several years and much credit is due this bull as a sire. His best son, Good Count, a low-set, thick-fleshed roan out of Cloverdale Countess by Imp. Marquis of Zenda has also been in service for three years. Both are proving their value as sires and much of their get is included in the sale and the cows and heifers are bred to them. The bull offering is decidedly good in bulls with such conformation and character as is demanded by the more critical buyers of herd headers. Golden Count a white two year old by Good Count and out of Golden Girl, she by old Choice Goods and out of Golden Abbottsburn by Young Abbottsburn, is a low-set, thick-fleshed bull with such good lines, even balance, fine front and rear quarters and character that he should appeal to those looking for high class herd headers. Another white two year old is Whitehall Prince by Whitehall Rosedale and out of an imported Rosewood cow. He is a sappy fellow, a thick, heavy flesher and will please many. A roan February calf by Good Count and out of an Avondale cow is a prospect worthy of consideration by those looking for herd header material. A yearling by Whitehall Rosedale and out of a Glenbrook Sultan cow and a yearling by King Cumberland are strong, useful fellows ready to do service. Several other strong stock bulls are listed so that those looking for good steer bulls will find ample opportunity for selections. The female offering is good. There are listed daughters of Fair Goods, Good Count, Villager, Whitehall Rosedale, Whitehall King and other noted bulls. They are representatives of the Princess Royal Campbell Ury, Marr Lady Mary, Athene and other noted Scotch tribes with a few well-bred American-bred sorts. There is show material listed, also choice breeding cows and heifers that merit the attention of the more discriminating cattle men. Of these more extended mention will be made next week. In the meantime send for a catalog which gives complete information. Kindly mention The Homestead when doing this. The advertisement will be found on page 43.

Epley Wins Again on Big Junior Sow.

At the recent fair at St. Joseph, W. E. Epley, Diller, Neb., won first and championship on his big senior yearling sow. She was the biggest senior yearling out the past season, and has met with right hearty approval at every show except Nebraska. The judge of that show says that was one place where he felt that he was in error in not placing that sow higher up the line. The judging at Nebraska met with the most hearty approval by exhibitors and on-lookers the past season than for many years, and while any judge will make mistakes, not all of them will admit them. This big sow was in good form all season, and has since the fairs farrowed a litter of six pigs, doing well. Mr. Epley will put up an offering for February 13th that will make those that attend the sale sit up and take notice. He has a lot of this big stuff around the place. The sow just mentioned weighed 745 pounds after completing the fair circuit. Mr. Epley has a few boars for sale that he is pricing right; they are spring farrow, also the herd boar, Expansion Chief. He is an extra good breeder, but the fact that Mr. Epley has so much of his get makes him unprofitable to keep longer.

Coleman Bros.' Good Herds.

One of the best herds of real big-type Polands of Nebraska is the herd owned by Coleman Bros., Ithaca. These gentlemen have been breeding good hogs for a number of years and they early went after the very best of the very biggest they could find. They have used many of the good boars of the country, and today they have in service as good a son of A Wonder as we have ever seen. This boar has remarkable quality, and yet he is big. He is a two year old and will weigh about 800 and in just breeding thrift. He will make between 900 and 1,000 pounds at maturity and is a sire with few equals in the West. These gentlemen have twenty-five fall sows, yearlings this fall that are as good a bunch of fall sows as we have seen in many a day. They are all the get of Excellent Wonder, except two or three. They are of course from a high-class line of sows, but the type of the real big ones is there and they are sure fine. A new boar from the Thos. F. Miller herd has been added and he is by a son of Long Chief 2d. He promises well and is sure a good young boar. Coleman Bros. will make a sale of Poland Chinas on February 2d. In the meantime they have some good Short-horn bulls for sale at $100 each. They are sired by a bull from the herd Herr Bros. & Reynolds, of Wisconsin.

Metier's Milking Short-horn Sale.

On November 20th, at Weldon, Iowa, A. H. Metier will make a closing-out sale of forty-four head of milking Short-horns and it promises to be one of the attractive sales of the year. The Metier herd has been established for over a quarter of a century and has been bred along the Bates lines, known as the milking strains. For those breeders and farmers who are interested in these milking Short-horns we will say here is a good sale to attend. There will be forty head of females in the sale and four head of bulls. Among these will be six head of straight-bred Bates cattle of the purest strains, and many of their descendants will also be included in the sale. Two of these will be Bates Waterloos and four will be Oxford Duchesses. Meadow Duchess 4th and Meadow Duchess 6th will be two of the pure or straight bred Waterloos and they were daughters of Metier's Union Flag Duke, a bull that he formerly used with much success in his herd. Both of these cows are safe in calf to his splendid roan herd bull, Arabella's Crescent Knight. Among the straight Oxfords that he is selling is Oxford Duchess of Leon, a daughter of that celebrated Bates bull, Waterloo Duke of Hazelhurst. She is one of the most royally bred Bates' cows living and she has been a splendid breeder in this herd. Oxford May 2d, is a five year old, and is a daughter of Metier's Union Flag Duke and she is another well-bred Oxford. Oxford May 3d is a daughter of that grand old breeding bull, Duke of Wapsie, a bull that was formerly used with the greatest success in the O. M. Healy herd at Bedford and this cow sells with a good roan bull calf at foot by Arabella's Crescent Knight. Oxford May 4th is another good daughter of Duke of Wapsie, and these are as straight and as pure Bates as you will find in this country. There will be twenty head of Julia Wards of Golden Pippins in the sale and this is a strain that has been in this herd for over a quarter of a century and has been cherished as one of their most noted and greatest strains. Among these good Julia Wards is Julia Ann 6th, a daughter of Metier's Union Flag Duke, and she has a splendid roan bull calf in the sale. Golden Pippin 8th is also one of the best of this particular family and she sells with a splendid roan cow calf at foot. There are a lot more of these Julia Wards in the sale and they are among the very best that he will offer. Among the very choice heifers he will sell is Miss Golden Metier, a splendid white heifer and she is sired by Arabella's Crescent Knight and she belongs to the Julia Ward tribe. She is one of the very choicest heifers in the sale and she is not very far from a show heifer if she was taken good care of by the man that buys her. The herd bull, Arabella's Crescent Knight, will also be sold and he is a splendid roan-Scotch bull. He is a son of that noted bull Imp. Crescent Knight, that was formerly used in the Cargill herd of Canada and later in the herd of R. O. Miller at Lucas, Iowa. This bull will weigh about a ton and is a nice roan in color and is a splendid breeding bull. His get in this sale will demonstrate his ability as a breeding bull. There will also be some nice young bulls in the sale that are strictly all right. Write A. H. Metier, Weldon, Iowa, for a copy of his catalog and kindly mention The Homestead. See advertisement on this page.

Stone's Kansas City Aberdeen Angus Sale.

The Aberdeen Angus cattle Marion C. Stone, Milan, Mo., sells at Kansas City, Mo., on Friday, November 14th, are cattle that should command the attention of the best cattle men, who want either high-class bulls or females. Nine strong young bulls and forty-one cows and heifers are listed and there is not one that Mr. Stone need make an apology for. There has not been so high-class a lot of Aberdeen Angus cattle offered in Kansas City for years and those who want bulls or females of this great beef producing breed should not overlook this opportunity, as Kansas City has long since been known as the best market to buy pure-bred cattle on that is found west of the Mississippi river. Mr. Stone has never used any but high-class sires in his herd and the results are now offered. His present herd bull, Kessenger 141961, a K. Pride, is the sire of all of the younger things and the cows are in calf to him. He will be on exhibition sale day to show the kind of sire

A. H. METIER'S
Closing Out Sale of
MILKING
SHORT-HORNS
Of the Celebrated Bates-bred Strains

WELDON, IOWA
THURSDAY, NOVEMBER 20, '13

44 HEAD: 40 COWS, 4 BULLS 44

INCLUDED will be my splendid Scotch bull, Arabella's Crescent Knight, a son of Imp. Crescent Knight, a bull formerly used in the Cargill herd of Canada. He is a massive roan bull and a wonderfully good breeder. There will be two head of pure-bred **Waterloos** and four head of **Oxford Dutchess** in the sale. These are absolutely **straight-bred Bates cattle** of the very richest pedigrees known to the breed. There will also be 20 head of **Golden Pippins** or **Julia Wards** in the sale, and these are our most famous strain, having been in our herd for over a quarter of a century. There will be **8 yearling heifers, 5 two-year-olds, and 5 spring calves** in the sale, also **3 very choice young bulls.** The day of the milking Short-horn is here. If you want some of these celebrated milking strains make it a point to attend my sale. Col. H. S. Duncan and McMains, auctioneers. Write for catalog at once and mention Iowa Homestead.

A. H. METIER - WELDON, IOWA

C. E. GIBBS' SALE
SHORT-HORN CATTLE
SCOTCH AND SCOTCH-TOPPED
KLEMME, IOWA, NOVEMBER 19, 1913
50 Head: 34 Cows and Heifers, 16 Bulls. 50

INCLUDED will be the splendid young Scotch bull, **Pride Goods 378193**, a son of the well-known Merry Goods, and he is a royally bred Cruickshank Secret. Also a number of **young Scotch bulls in the sale. I am listing my best breeding cows and my best show cows,** several of which were winners at the fairs this fall. There will be **10 of my choicest heifers** in the sale and there will be **15 head of calves at side of dams.** Here will be one of the greatest opportunities of the year to buy Short-horn cattle. Col. McIlrath, Auctioneer. Catalog ready. Write for it at once and mention Iowa Homestead. Address

C. E. GIBBS - KLEMME, IOWA

the younger cattle are by. Heading the bull offering is the Trojan Erica yearling by Kissinger and the K. Pride yearling by the same sire. In this pair of bulls Mr. Stone is selling a pair of high-class fellows, as well bred as could be desired. Others of the same type afford bull buyers an excellent opportunity. There is listed twenty-two cows and nearly every one has a calf at foot by Kissinger and is re-bred to him. They are in the very best possible condition for the buyer and are in such nice condition as to show their value. The nineteen heifers are certainly a grand lot and are mostly bred. Among these females are several K. Prides, daughters and granddaughters of Imp. Pride of Gartley 2d, daughters and granddaughters of the Trojan Erica cow, Imp. Eppy of Finlarig, daughter and granddaughters of Imp. Joyful Girl of Theakston, the foundation of Mr. Stone's Lady Ida tribe that is proving one of his greatest producing tribes. He also sells a nice string of Abbess females that are daughters and granddaughters of Imp. Abbess of Benton 4th. For this sale Mr. Stone has listed just as good cattle as he owns as he realizes that only the very best of the herd will do for a sale at Kansas City. He wants everyone interested to come to the sale and see the cattle he sells whether you buy or not, as he has a large herd at home and knows that while you may not be ready to buy at this time you will appreciate the kind he is growing and when ready to buy will not forget his herd. Note this page for Mr. Stone's advertisement and send now for a catalog and kindly mention this paper when doing so.

STONE'S GREATEST
ABERDEEN ANGUS CATTLE SALE
WILL BE HELD IN LIVE STOCK SALE PAVILION
KANSAS CITY, MISSOURI, FRIDAY, NOV. 14, '13

50 Head: 9 High-class Bulls, 31 Superb Females. 50

THE nine bulls are good, a Trojan Erica and a K. Pride are sure herd headers. There is not an inferior bull in the lot. Twenty-one cows, nearly every one with calf at foot and rebred. They are the kind that produce top stuff. Nineteen two-year-old heifers all sired by my K. Pride herd bull, Kissinger 141961. There has not been offered in recent times such an array of females. There will be several K. Prides, daughters and granddaughters of the grand old Imp. Pride of Gartley 2nd, the foundation of my K. Prides. A nice bunch of Trojan Ericas, four daughters and granddaughters of Imp. Eppy of Finlarg, the foundation of my Trojan Ericas. Four daughters and several granddaughters of the good old Imp. Joyful Girl of Theakston, the foundation of my Lady Idas. (Chas. Escher, Jr., says she is one of the best Lady Idas that ever crossed the water.) Daughters and granddaughters of Imp. Abbess of Benton 4th, the foundation of my Abbess tribe and a nice string of Easter Tulloch Duchess, the kind that make good. Kissinger, my present herd bull that is the sire of all the young cattle, will be at the sale so you may see their sire. Send now for catalog. If you want good reliable cattle this will be your best opportunity. Address mentioning The Iowa Homestead.

MARION C. STONE - - - MILAN, MISSOURI

Cols. Reppert and Graham, Auctioneers.

Mrs. August Gorders' Sale.

On Wednesday, November 12th, at Plattsmouth, Neb., Mrs. August Gorder will make a public sale of fifty head of large-type Poland Chinas, and hers will be one of the splendid offerings of the year. The Gorder herd was established by the late August Gorder and his wife and they were never known to buy a poor boar. The young spring boars and gilts are largely sired by Futurity Jack, that noted Nebraska State Fair prize-winning boar, that stood at the head of their herd. Mr. Gorder purchased this boar last fall at the Lonergan sale and he was the high-priced boar in that offering. He was a son of the noted boar, I Am Big Too, so you will know he had a right to be a splendid breeding boar. She is selling a good two-year-old herd boar in Petite Tecumseh, a grandson of old Exception, and he will weigh over 700 pounds. There are two splendid fall boars in this sale, both sired by Teddy, a former herd boar and these are out of a Centennial dam. These are large, lusty, big-boned fellows, with plenty of size and quality and are right to go out and do good service. Some splendid sows by this boar, Teddy, are listed, also daughters of Big Smoke, Pawnee Nelson, Big Hadley and High Pocket. In her catalog announcement she says: "I extend an invitation to you to come to our first Poland China sale. My late husband and I have worked together for many years to establish a herd of hogs that would be a credit to ourselves and the breed. In selecting our foundation we bought from the best herds of the big type, from breeders who have made a success of the business, never allowing the price to stand in way of securing a good animal. The offering will, I believe, prove that our efforts have not been in vain. Field men and others who have seen it pronounce it to be one of the best of the season. You will find in this offering a useful lot in the best breeding condition." Write Mrs. Gorder at Plattsmouth, Neb., for catalog and then make it a point to attend her sale. Bids sent to M. T. White of The Homestead in care of Mrs. Gorder will receive attention on day of sale.

Pioneer Poland China Boars.

On page 44 that veteran breeder of Poland China hogs, W. Z. Swallow, advertises that he has now for sale a limited number of high-class boars. One of these is Big Jumbo 2d, an August two year old from the Peter Mouw herd, that should go to head some better than usual big-type herd. He is a son of Big Bone, he by A Wonder, and his dam was by a son of Chief Price 2d. It is a happy combination of the blood of the Mouw herd and has produced a great big, strong-boned, husky hog that has already a reputation as an excellent breeder. This hog will be sold at the low price of $100 and the first order takes it. A fine litter on the Swallow farm is to his credit. There are also for sale a number of spring pigs, all of them big, thrifty fellows in good form. One of these, Bouncer's Model, a March pig, is by Bouncer, he by Medler K. O., and his dam was Edith's Model by Banker's Model. This pig is one of a litter that made remarkable winnings at the futurity show at the late Iowa State Fair. His brothers took first and second and a sister fifth, while the litter in which this pig was included took first as produce of sow. Another March pig bred in Minnesota is by Made To Order, a 930-pound hog. This fellow is a big, strong, well-formed animal, right in every way, and except for the fact that Mr. Swallow is reducing his herd quite materially he would be kept and fitted out for next season's shows. That was the purpose for which he was bought. Still another March pig is by L.'s Big Bone, out of a sow by Chief Price Again. This is popular breeding and the pig is a credit to the blood he carries. Royal Nelson, another March pig, is by Big Nelson, he a son of Pawnee Nelson, and his dam was a granddaughter of Chief Price 2d. Three pigs are by Swallow's A Wonder, dam Miss T. R.'s Perfection 5th, a sow which carries a good deal of the blood of old T. R.'s Perfection, and in her growthiness and finish is a credit to that remarkable line of breeding. Two others are by Look's Best, dam by Advisor, a big-type hog that Mr. Swallow used a year or two since. It will be remembered that Mr. Swallow made an exhibit at the late Iowa State Fair and that one of his yearling boars, after capturing $35 in prize money in the futurity class followed that up by winning in the regular class and later sold to the Iowa State College to head the college herd. Another fall boar shown took two prizes in his class and was later sold to a prominent breeder at a long price. Mr. Swallow has no females for sale. He disposed of a bunch of good, spring sows as herd foundation material to H. B. Cunningham, of Huntsville, Mo. The prices that will be quoted on the pigs above mentioned are so low that they cannot remain long unsold. For that reason buyers should at once come and see them or write to W. Z. Swallow, Waukee, Iowa.

Beware of Prussic Acid Poisoning.

In timely warnings that are being issued by a number of state veterinaries, the attention of stock raisers is called to the fact that prussic acid, in greater or less quantities, is always present in cornstalks which have been stunted in growth by drouth. It is pointed out that the feeding of such fodder to horses, cattle and sheep is attended by extreme danger because, as everyone knows, prussic acid is one of the most deadly poisons. Unless its action is counteracted it often kills an animal in a few hours. It is claimed that no danger will attend the feeding of drouth-stunted cornstalks which are stronger in prussic acid than stalks of ordinary years if the stock have free access to Columbian Stock Powders. These powders have been on the market for over twenty-five years, and are used by many of the large and successful feeders. These powders are said to be anti-acid and anti-fermentative, thus counteracting the effects of the prussic acid. The manufacturers also claim that by using them new corn can be fed to hogs without fear of causing indigestion or worms which is frequently the case. The Columbian Hog & Cattle Powder Company, Dept. 2, 1450 Genesee St., Kansas City, Mo., offer to let our readers feed their powders for ninety days before paying a cent, and we would also suggest that all who are interested write to the above address for their free book just issued which gives further details. See advertisement on page 31.

McWilliams' Durocs.

The Sunnyside Duroc Jerseys advertised on page 40 have a reputation for size and quality which has made them favorites in the past. At the present time thirty-five head of boars of spring farrow are offered for sale. These pigs are cholera immune and will be safe to go anywhere. In order to reduce the stock some extraordinarily low prices will be quoted. For additional descriptions write to M. A. McWilliams, R. F. D. 1, Wall Lake, Iowa.

A Prize-Winning Shire Mare.

The London, England, Live Stock Journal, says: "The Shire mare, Woodperry Locket, is claimed to be the unbeaten brood mare with foal at foot of 1913. She is extremely well bred, her sire being the London champion and sire of champions, Markeaton Royal Harold. Although she is seventeen hands, she is possessed of size, power and weight, with beautiful feminine characteristic, such as a sweet head and neck, sweeping quarters, depth and rotundity of rib, majestic in movement, large bone, of the very best quality, and good feet. Although Messrs. Truman have secured her for the United States, Messrs. Forshaw have retained her foal, which won first at Newark and a first at the Notts County Show, and they have refused a big figure for him. In Woodperry Locket Messrs. Truman have secured a mare that should please the most fastidious in the United States, whither she sailed on October 4th. Her prizes are as follows: 1909, third London Shire Horse Show; first and champion Shire Horse Society's silver medal, Newark; first and Shire Horse Society's gold medal, Nottinghamshire County Show; second Peterborough Agricultural Show; 1910, second London Shire Horse Show (large mare class); second Notts County and Shire Horse Society's gold medal; 1911, first Notts County Show, first and champion Peterborough Agricultural Show; 1913, second London Shire Horse Show; first Newark Agricultural Show; first Notts County and Shire Horse Society's gold medal; first Peterborough Agricultural; first Great Yorkshire, York, and first Royal Lands Show." This mare will be among the horses exhibited at the International Live Stock Exposition by Trumans' Pioneer Stud Farm, Bushnell, Ill. See advertisement on page 42.

The splendid young Cruickshank Secret bull, Pride Goods 378193, a son of the noted Merry Goods that will be sold in the C. E. Gibbs sale at Klemme, Iowa, on November 19th. See advertisement on page 38.

Lang & Company's New Importation of Percherons and Belgians.

W. A. Lange & Company, Greely, Iowa, have just received their new importation of high-class Percheron and Belgian stallions and mares. They have enjoyed an excellent business during the past twelve months, in fact, they did not have a stallion in the barn for some time before this new importation arrived which shows that they have been doing a thriving business. They handle only horses of the best quality and owing to the fact that they were completely sold out before this new importation arrived buyers may rest assured that all of their horses are young and fresh and they will not be shown any carried-over stock. This firm has been importing horses for a number of years and has built up an excellent trade by fair dealing and good business methods. They can supply horses with quality and conformation of the right sort at as low prices as are consistent with the quality of horses they offer. They are in position to give liberal terms and a guarantee that is right. They solicit correspondence from anyone interested and will be glad to give any information that may be asked. After December 1st they will be glad to mail absolutely free a pretty calendar to any of our readers who will write for same, mentioning this paper. See page 42 and when writing kindly mention The Homestead.

The Gibbs Short-horn Sale.

On November 19th, at Klemme, Iowa, C. E. Gibbs, one of the best known breeders in northern Iowa will make a public sale of fifty head of Scotch and Scotch-topped Short-horns, and it promises to be one of the best sales to be held in that section this fall. He is selling thirty-four head of cows and heifers and sixteen head of bulls. There will be twelve to fifteen head of calves at foot, so you can just bank on it that this will be a good sale to attend. He is listing ten or twelve of his very best young heifers and a lot of the very best breeding cows he has in the herd. As a special attraction he is selling his splendid young Scotch bull, Pride Goods 378193, a son of the well-known Bellows-bred bull, Merry Goods. This bull is a white in color, a good individual and he is out of the splendid cow, Lena's Pride, by Champion of Lyndale and his grandsire is the well-known bull, Imp. Lavender Champion. He is a richly bred Cruickshank Secret and will make an excellent herd bull. Some breeder who is looking for a good, white Scotch bull will be interested in this fellow because his breeding is just as good as you can get and he is a right good individual. There will be a choice lot of young bulls also and these will be appreciated by those who attend this sale. Mr. Gibbs expects to be away for a time and he has concluded to sell the best cows he has and is, therefore, listing some of his best breeders that he did not originally intend to part with. Among these is Laura, a large red cow that he won first prize on at the Mason County Fair. Lucy Maid 4th, a richly-bred Scotch-topped Young Mary, and one of his best breeding cows sells with a nice white bull calf at foot. Another large red cow called Beauty is listed and she sells

with a nice roan cow calf at foot by Rookwood Lavender. Alberta of Oakland is one of the large roan cows, and one of the best he has in the herd and she is also listed for this sale. Then there is Red Grace and Red Grace 3d, two cows that will weigh around 1,600 pounds each go in as well as a lot of others that are equally good, and these must be seen to be appreciated. He has a nice string of heifers in this sale that should meet with favor on the part of those who attend his sale. The Gibbs offering will be found to be in good condition, and the offering is a very useful and a well-bred lot of cattle. His catalog is now ready for those who ask for it and it will be sent upon application. When writing for it kindly mention The Homestead. See page 38.

Duroc Jersey Dispersion Sale.

A. T. Bosley advises us that on Saturday, November 15th, he will make a dispersion sale which shall include his entire herd of Duroc Jersey hogs, the sale to take place at Smith's sale pavilion, Fairbury, Neb. There will be over 100 head of pure-bred hogs in this consignment. They are the get of Goldenrod King Jr. (by Goldenrod King), Wide Awake Lad, and other sires of popular breeding. The dams are of equally well-appreciated blood lines. Twenty head are coming yearling boars, two aged boars, eight spring boars, eight yearling sows, fifteen spring sows and sixty pigs farrowed in August and September, 1913. The sale will be held regardless of weather. The opportunity is one of unusual interest to those who want to buy really good stock. Do not forget that it takes place on Saturday, November 15th. Any information desired may be obtained by writing to A. T. Bosley, Fairbury, Neb.

A Wonder Breeding at Special Prices.

Frank G. Hoagland, Glenville, Neb., has a good lot of early spring Poland China boars, also a few fall boars and they are all for sale. They are mostly sired by Jumbo Wonder, a son of A Wonder and a really good A Wonder boar. These pigs are not overfed nor have they been crowded in the least, and they will be for sale at such prices that any farmer or breeder can afford to buy a pure-bred boar. In Mr. Hoagland's section of the country they have little corn this year, and for that reason a market must be sought where they have feed. For that reason, Mr. Hoagland is offering these boars to the readers of this paper, and he says that he will take a price that is about half what these boars should bring, and that is only a small bit above the actual cost of production. This means that there will be little excuse for any breeder or farmer to use any but a good boar this season. There are boars in this herd, that had they been fitted, would bring $100, but they have not been fitted, and as breeders are really more valuable, yet they can be had for a fourth the money. The sow herd on the Hoagland farm is one of good breeding, and good size stock. There will be no more sons of A Wonder, for the old boar is dead, and this breeding is as close to the fountain head as possible to find now. Send in your orders early and be assured of a good selection. See this page.

Knoxville Poland China Sale.

Messrs. Shivvers and Perry, of Knoxville, Iowa, announce a public sale of Poland China boars to take place at Elliott's sale barn, Knoxville, Iowa, November 14th, as per advertisement on this page. There will be fifty head in this sale. They will be the get of Chief I Am and Longfellow. It will be remembered that Shivvers and Perry herds made some sensational showing at the late Iowa State Fair. The pigs now to be sold are cholera immune, right every way and desirable animals. For full particulars write to Shivvers and Perry, Knoxville, Iowa.

Again Expansion.

Again Expansion, the hog illustrated on page 30, weighed 915 pounds at twenty-three months of age. He won first prize in class and was the champion Poland China boar bred by exhibitor at the Nebraska State Fair of 1913. He was bred and owned by C. B. Powers, Aurora, Neb. On the 12th of November Mr. Powers will sell a number of forty-five head of young breeding boars and sows from this noted big-type herd. These are sired by Again Expansion, Big Bone 7th (a grandson of Mabel's Wonder). See advertisement on this page. For catalogs address C. B. Powers, Aurora,

Holstein Herd For Sale.

A herd of Holstein cattle is offered for sale by C. W. Barclay as per advertisement on page 12. Mr. Barclay has no fault to find with these cattle They have made him good money and are right from every point of view, but he wishes to change the plan of operating his farm and has decided to let the Holsteins go. They are now offered at reasonable prices, singly or in lots, as buyers may select. There are in all sixteen head. Five of these are bulls, three of which are of serviceable age. The herd bull, now three years old, is Colantha 4th's Lad Leda, a Copestake-bred bull and one which carries lines of breeding representing not only popular strains, but those of a high order of excellence as producers. Two two year olds are big, husky fellows, one of them a son of Colantha Mercedes Prince. Two others are yearlings. There are nine cows and heifers of breeding age. Five of these are matured cows, two with calf at foot and the others due to drop calves soon. None of these cows are of advanced age. They are all good milkers and from the highest producing strains. One of them had a milk period covering thirteen months. The herd was established by foundation material from the Copestake and Barney herds, both of which are recognized as having high standards. Mr. Barclay wants to sell these cattle quick and will make low prices. He would take $2,300 for the lot or will sell them individually if the buyer so wishes. Address inquiries to C. W. Barclay, Madrid, Iowa.

A Congress Dry in Name Only.

Many Lively Addresses Were Delivered at International Dry-Farming Congress.

A MEETING of especial interest to farmers in the Southwest was the International Dry-Farming Congress which has just been concluded at Tulsa, Oklahoma. Fair sized crowds despite unfavorable weather gathered from Oklahoma and adjoining states to hear men of national and international reputation discuss subjects of great interest, or of supposed interest, to those who farm. Not only was the entire United States represented, but a large number of prominent agricultural leaders and thinkers from foreign countries were there. Noticeable among the speakers were, Henry J. Waters, formerly of Missouri, and now president of the Kansas Agricultural College, Manhattan; H. M. Bainer, of Amarillo, Texas; W. M. Jardine and W. A. Cochel, of the Kansas Agricultural College; J. H. Shepherd, of the North Dakota Agricultural College; Philander P. Lewis, of Crescent, Missouri; C. A. Ocock, of Peoria, Illinois; John T. Woodruff, of Springfield, Missouri; Col. Frederick A. Farnsworth, Sec. of the American Bankers Association; Karabat Nourian Effendi, of Turkey; Romulo S. Nalon, of Argentina; Dr. Konrad von Meyenburg, Balle, Switzerland; Dr. Romulo S. Escobar, of Mexico, and many governors and prominent citizens from all sections. The address of Henry J. Waters was on "Home Essentials to Rural Progress" and, of course, contained many striking examples and illustrations of the needs of the rural people of the present time, of the necessity of closer co-operation among them and of the closer attention which must be paid to all of the improvements of the farm home.

In discussing the use of silage for feeding cattle W. A. Cochel reviewed the experiments which the Kansas Agricultural College is making. He gave some most interesting and helpful figures regarding the results which they have secured in western Kansas in feeding beef cows on economically produced feeds. It was found, said Mr. Cochel, that:

Where succulent feed is provided during the winter feeding period, greater use can be made of unpalatable roughage than where the stock is maintained on dry feeds. Cows which received all of the kafir they would eat made an average gain of 123.7 pounds, while those which received whole fodder gained only 49.7 pounds. The smallest gain, 35.8 pounds, was made by the cattle receiving kafir stover. An interesting feature is that the cows which received a limited ration of silage made an average gain of 56.5 pounds in a period of 100 days. These results indicate that it is possible to increase very materially the live stock carrying capacity of the land by use of the silo. As there are only 2.28 acres of grain crops such as kafir required to maintain a cow on a limited silage ration during the winter where she had access to all of the straw she would eat and a pound of cottonseed meal, when fed a full feed of silage this acreage was increased to 4.2 and when fed on whole kafir fodder directly from the same field there was a further increase of 2.28 acres required for winter feeding. With the results secured from this test, one would be justified in stating the efficiency of the crop, because of being put in the silo, was increased at least 50 per cent as compared with the same crops fed in a normal manner. When it comes to considering the cost of the feed consumed, the results are entirely consistent with the behavior of the cattle as far as the character of the ration is concerned. These results were secured with kafir, which is one of the leading forage crops that can be grown successfully from year to year in the Great Plains region. It has the advantage over corn for silage purposes in that it will resist drouth, produce a larger tonnage per acre and is just as palatable and just as nutritious when put into the silo.

"The Business Side of Dry Farming" was the subject of the address by John T. Woodruff, the man who has made such a remarkable business showing in the development of the Ozark country. Like every successful business man he laid particular emphasis upon the necessity of more co-operation among the men who farm and being a man whose great success has been due to his ability to detect vital points his words have considerable weight. Said Mr. Woodruff:

The one essential thing in any branch of farming is co-operation. We should imitate the railroads, who were quick to learn the advantages of a uniform rate to common points and the interchange of each other's cars carrying through tonnage. The manufacturer early established bureaus to promote foreign trade and alliances to secure adequate import duties on goods brought from foreign countries. The merchants buy on the co-operative plan, and have their gentlemen's agreements as to trade territory. Labor, by organization, has naterially advanced wages and shortened the hours of service. But the farmers have formed no such alliances. Each has stood independent and alone. Until recently, the sum total of their co-operation has existed in lending and borrowing farm implements, and swapping work at harvest time. Lately there has been some effort at co-operation through agencies to dispose of a given crop. These efforts have met with some success, but I am persuaded that their co-operation must be of a wider range. There is no good reason why the farmers of any community should not make common cause, and under proper articles of agreement form stock companies, putting in the rents of their farms for a given period, their work animals and farming implements as and for capital stock, and entrust the management of their combined or associated farms to a directorate composed of the stockholders, and supervision to the man best qualified to do the executive work. This arrangement would enable them not only to produce more at a less cost and sell at better prices, but also to buy their supplies at lower figures and on more favorable terms, and, what is equally

POWERS' GREAT POLAND CHINA SALE

OF AGAIN EXPANSION AND BIG-BONE BOARS AND GILTS

Will be held in the sale pavilion in AURORA, NEBRASKA,

WEDNESDAY, NOVEMBER 12, 1913

THOSE interested in the improvement of the Poland China breed should write at once for the catalog of this sale, or better, just get ready and come. The forty-five head listed are immune and are of excellent pedigree. This herd has produced some of the world's greatest big Polands in recent years. This sale will be an opportunity to buy the best at very moderate prices. J. C. Price, field man for Homestead.
C. B. POWERS - - - - - - - - AURORA, NEB.

WM. BUEHLER, STERLING, NEBRASKA

important, obtain operating capital in larger volume and on more favorable terms.

A number of specialists in the handling of farm machinery were on hand, some of them being men who have designed and produced many of the most helpful tools which are in use on the modern farm. Of course, the subject of plowing came up and one of the strongest discussions was the address of Dr. W. E. Taylor, of Moline, Illinois. Discussing the subject of deep tillage Dr. Taylor stated:

In some sections of our country where the soil is rich in humus, which is indicated by its black color, it is safe, after the first plowing, to till deep and, as a rule, the production will be in keeping with the depth the ground is tilled. The arguments, based upon experience in favor of deep tillage when the laws governing plant growth and plant food chemistry are not violated, are so apparent that men cannot afford to ignore the benefits to be derived from making a thorough investigation of all conditions and govern themselves accordingly.

The danger of bringing subsoil to the surface can be prevented and many of the benefits of deep plowing gained by using a plow which thoroughly pulverizes the bottom half of the furrow slice, but does not place the subsoil on top of the surface soil.

This plow has a broad share and the moldboard is very narrow at the point where it joins the share, but widens gradually at the upper end. The share loosens and pulverizes the bottom slice which immediately falls to the bottom of the furrow through the space between the outer edge of the moldboard and the wing of the share. The broad part of the moldboard turns the top soil in the ordinary way.

While this plow penetrates to a depth of fourteen to sixteen inches, the furrow is left half full of pulverized soil. A seed-bed is provided for plant roots. Also owing to the loose condition of the soil, water is rapidly absorbed.

The school and the home came in for their share of discussion. In considering the need of more social life for rural communities H. M. Bainer, of Texas, proposed that each school house should become a social center ment and diversion. He mentioned a community in his own state where this is being done to the mutual advantage of all concerned. This school house, which is large, well ventilated, warm and lighted, is used for school purposes, for debates, lectures, farmers' institutes, religious purposes and various informal meetings of farm folk where the demand is for more room than is to be found in the average home. In speaking of the work which has been done in this one community, Mr. Bainer said:

When this dream first took form in the shape of a house, three or four years ago, it was found that but few if any of the men and women in the community would take the lead. They were reticent, and were with difficulty stimulated to the point of taking the initiative. This made necessary the introduction of speakers and other entertainers from outside communities. But today, what a difference! Men and women of the community now stand forth and give the social center gatherings the benefit of their years of experience, and it is the exception, and not the rule, when an outside lecturer, reader or speaker is engaged.

It matters little what the subject, be it seed corn selection, a consideration of a true thought to the minds of planting cotton, the growing of alfalfa, melons, fruits or gardens, the people of the community may be relied upon to furnish adequate information on the points engaging attention. The "social center," which for our purposes today, is the school house, resounds with eloquence of the real type, that used as a vehicle for the transportation of a true thought to the minds of intelligent hearers. Its walls are hung with art executions of the dwellers in the community, while music is made a portion of many programs.

Of course, "Rural Credits," at the present time attracting so much attention in the press of the country, occupied a prominent place on the program of the Dry-Farming Congress. Perhaps one of the men who has the best insight of the present day banking conditions is Frederick E. Farnsworth, of the American Bankers Association. "Why the Bankers are Working with the Farmers," is the subject which he discussed. After pointing out how both city and country banks are absolutely dependent upon the soil and the prosperity of the men which the soil supports he emphasized the fact that, besides aiding farmers, banks must of necessity loan money to grain, livestock and cotton buyers, to mail order houses, makers of farm machinery, implement dealers and, in fact, the many which are dependent upon farming for their existence. The opinions of farm people as a class as held by bankers was probably best brought out when he said:

The American farmer is justly famed for his independence. But he carries that independence too far when he considers himself exempt from the conditions under which other classes of borrowers must meet their obligations promptly. Country bankers, and those of you here today who may be stockholders in banks, know that farmers, as a rule, are among the most negligent of creditors. The farmer who pays his sixty days' note in ninety days, or who fails to renew his loan promptly, should realize that he is, to that extent, impairing the business standing of agriculture as an industry, and the credit reputation of the agriculturist as a borrower. The merchant who wants to increase his business and its producing capacity, the farmer who wants a loan to develop or stock his farm, considers the fact that he has the land or the livestock sufficient, although he may be, and usually is, unable to submit proofs from his accounts that he is keeping up the fertility value of his soil, or that every cow in his dairy herd is making money for him. Before we make too many assertions about the need of increased credit facilities let us be sure that the American farmer is making good use of what he has.

All things considered the International Dry-Farming Congress was this year the best of any which has been held. As in all such gatherings, so many subjects are discussed and so varied is the program that it sometimes seems impossible to go to the bottom of everything as thoroughly as one would naturally like to do. It would also be more interesting if more men who are actually each day between the plow handles could be induced to assemble at one of these congresses and give their opinions on the various questions which are arousing such lively discussions among agriculturists the country over. Certain it is that the speakers present made their ideas very clear and many most helpful thoughts were turned loose.

Baguio, in the Philippines, has been strengthening its claim to be the wettest place in the world. On July 29th the precipitation was 31.79 inches, which nearly equals the world's mean rainfall for the year. But Baguio has done better than that; it made a world's record in July, 1911, with 91.53 inches in four days, of which 33.70 inches fell in a single day. When 7½ feet of water comes down in one storm it is time to look after the shingling of the ark.

Considerable loss is occasioned on many farms every year by allowing crops to become too ripe before harvesting. This is especially true of grass or clover, or any crop intended for hay or as a substitute. With grasses when the seed begins to form well, and with grain crops when the grain begins to harden, is the best stage to harvest.

M'DERMOTT'S SALE SCOTCH SHORT-HORNS

KAHOKA, MO., TUESDAY, NOV. 25, '13

40 Head: 10 Bulls, 15 Cows, 15 Heifers---All Good

IN this annual draft sale are listed both bulls and females that should interest breeders looking for herd-header material, also show cattle. Special attention is directed to the white bull, Golden Count, calved September 30, 1911, sired by Good Count, dam Golden Girl by Choice Goods, and out of Golden Abbotsburn. He is a high class herd header, good from end to end; Whitehall Prince, another white two year old by Whitehall Rosedale and out of an imported Rosewood cow; a roan February calf by Good Count and out of an Avondale cow; a roan yearling by Whitehall Rosedale and out of a Glenbrook Sultan cow and a King Cumberland yearling afford unusual opportunities for selecting herd bull material. A Village Maid cow; a Campbell Ury show heifer, Maid of Whitehall; a Villager heifer, full sister to Countess S.; a pair of white junior heifers, one a Marr Lady Mary by Whitehall Rosedale, the other an Athene by Whitehall King are excellent prospects for junior yearlings. These, with the fine lot of cows heavy in calf to Fair Goods and Good Count and the fine lot of useful yearling and two-year-old heifers, offer exceptional opportunities to invest in good Short-horns. Col. Carey M. Jones, auctioneer. Catalogs that give full information will be mailed on receipt of request mentioning The Homestead.

J. W. M'DERMOTT - - - - KAHOKA, MISSOURI

ROOFING LUMBER PRICES WIRE and FENCING BUILDING MATERIAL

No Money Down

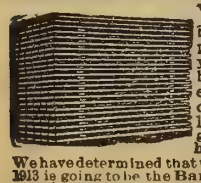
Our Great FALL Announcement

You can order a complete carload of material including everything you need to construct a building and we will ship it forward to you without you paying us a cent down.

Write Us for Our Liberal Terms

You are safe when you deal with us. Our capital stock is $10,000,000.00 and 20 years of honest dealing have earned a place for us in the public confidence that is unquestioned.

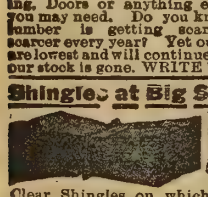
Lumber Prices S-m-a-s-h-e-d



Yes, we mean smashed. Absolutely busted to pieces. That's our policy. We quote prices on lumber that will positively save you big money. If you will send your lumber bill we will send you a freight paid estimate that will mean a saving to you of from 30% to 50%. Every stick is absolutely first class, brand new and fully up-to-grade such as you would buy from any reputable house in the United States.

We have determined that the Fall of 1913 is going to be the Banner Season in our great lumber department. We have on hand 20,000,000 feet of high-grade lumber suitable for the construction of Buildings, no matter for what purpose intended. Come to our great yards in Chicago and let us show you this stuff actually in stock. No other concern in the world has a more complete stock of everything needed to build, whether Lumber, Shingles, Structural Iron, Plumbing, Heating, Doors or anything else that you may need. Do you know that lumber is getting scarcer and scarcer every year? Yet our prices are lowest and will continue so until our stock is gone. WRITE TODAY.

Shingles at Big Saving



We have a special lot of 1,000,000 5 to 2 10 inch Clear Shingles on which we are making an exceptionally low price of $2.99. Order by Lot No. M. S. 40.

Free Building Book

A 200-page Book of Bargains in Millwork, Building Material of all kinds, including Paints, Plumbing, Heating, Structural Iron, Metal and Composition Roofing, Hardware, Carpenter's and Blacksmith's Tools, Wire Fencing. No prospective builder should be without it. **It Is Free.**

You can buy a carload of Building Material from us without paying us one cent in advance. All we want to know is that the money will be paid us as soon as the material is received, unloaded and checked up. Our terms are more liberal than anyone else offers.

CHICAGO HOUSE WRECKING CO.

Now operated under the name of

HARRIS BROTHERS COMPANY

FOR twenty years the CHICAGO HOUSE WRECKING COMPANY has been well and favorably known to the public. During all these years the four Harris Brothers have been the executive officers and owners and for that reason have finally decided to operate under the name of HARRIS BROTHERS COMPANY.

There is no change in our business, except that in the future the four Harris Brothers will advertise and sell their goods, heretofore advertised and sold under the name of the CHICAGO HOUSE WRECKING COMPANY, under the new name of HARRIS BROTHERS COMPANY.

Why We are Called the Great Price Wreckers

Consider what becomes of the stock of goods, when a manufacturer or big retail merchant goes bankrupt or "busted" as the saying goes. It is estimated that about ten thousand merchants annually meet with business disaster—this is why our company exists. If the stocks are sufficiently large and the goods are new and desirable, they find their natural way to our great forty acre plant for distribution at a small added profit, to our thousands of customers, who in this way get the benefit of wonderful bargains. In many cases our prices do not even represent the original cost of production. We stand foremost in our line. We recognize no competition. That's why we are called "THE GREAT PRICE WRECKERS."

Our Binding Guarantee

We guarantee absolute and complete satisfaction. There is no half way about this guarantee. Every purchase you make from us will be exactly as represented and you will be satisfied in every way, or we will make such just amends as are within our power. We will take back any unsatisfactory article at our freight expense both ways and refund your purchase price. We refer as to our responsibility to the publisher of this or any other publication or any bank or express company and to the public at large.

We Sell Practically Everything

Our stock includes practically "everything under the sun". It's in truth, from a needle to a locomotive. No matter what your vocation, or what position in life you occupy, or what your business, or how great a merchant you are, you have use for us, and we have the goods that you can buy from us to a decided advantage. The quicker you learn to recognize this fact, the sooner you will be "putting money in your pocket."

Our stock includes Building Material, Lumber, Roofing, Sash, Doors, Millwork, Wire and Fencing, Hardware, Plumbing Material, Heating Apparatus and Supplies, Furniture, Household Goods, Rugs, Stoves and everything needed to furnish or equip your home, your club or hotel. It includes Groceries, Clothing, Dry Goods, Boots and Shoes, Furnishing Goods and every single article to clothe a man, woman or child. It includes Sporting Goods, Fishing Tackle, Hunting Outfits, Tents, Guns, Harness and Vehicles, Jewelry, Sewing Machines, Clocks; also structural iron needed in construction of buildings, bridges, etc. Machinery, gasoline, gas and electric power outfits. In fact you cannot think of a single manufactured article that we cannot supply you at a saving in price. Let us convince you—it means but little effort on your part to prove the truth of all we say. Write us to-day for our Catalogue and literature. Fill in the coupon shown below.

THE GREAT PRICE WRECKERS

$759 Buys the Material to Build This House

This is Our House No. 6A.

THE GOLDEN HOOF

I'll Trade You a Galloway Manure Spreader Any Time for 400 Bushels of Corn! Read This Letter.

Here's One Man's Experience With a Galloway

I owned a six hundred acre tract of land and had it rented. The renter neglected to haul the manure out as it occupied a great deal of time in the old fashioned way of spreading with a fork. So in 1908 I decided to purchase the GALLOWAY SPREADER and put a man to work for one month. He hauled on an average of twenty loads per day. He hauled five hundred loads or more, about two-thirds more than the original way. I had even the old stack bottoms spread over the fields. We started on forty acres and manured twenty, that was in the fall of 1908. We put the forty in corn the next spring and **the twenty that got the manure yieided twenty bushels more per acre than the other twenty beside it on ground not manured.**

Both the renter and myself were well pleased with the results and the next spring, 1909, we decided to utilize all manure we could as it required so little time to use the GALLOWAY SPREADER as it takes about three minutes to distribute one load, and it takes thirty minutes or more the old fashioned way, then we get it more even and the manure went twice as far. I noticed in going over another farm, that I oversee, where there is no spreader provided, the manure was in chunks, other places were barely getting little orno good of the fertilizing. **The hay on the meadow yielding one-third more where we used the spreader.**

And in the fall of 1909 we manured ten acres for corn and when gathering this fall **we gathered from one-third to one-half more corn to the acre than heretofore, enough or more than enough to pay for a GALLOWAY SPREADER.** The land beside the ten acres was just as good, but did not yield but one-third as much. We tried it again on meadow land with good results.

FRANCIS E. CROUCH, Blockton, Iowa

Are You A Land Owner? Are You A Renter?

Then read this remarkable letter from an up-to-date, progressive farmer. Yes, sir, read it over twice---three times---a dozen times. Read it over and then think it over—it's the most unusual—the most remarkable—testimony on manure spreaders ever written. Why? I'll tell you why! Because, here is the case of a large landowner furnishing his renter not only with a manure spreader but with a man to run it at his own expense in order to get the manure out on his land and keep it in good condition. Did you ever hear of a similar case? I never did. I've heard of landowners buying spreaders for their tenants, but never before hiring a man to do the work.

Did it pay? I should say it did! Ask Mr. Crouch or his tenant. Will it pay you? I can show you thousands of letters from my customers that prove a Galloway Manure Spreader to be the best machinery investment they ever made. Yes, sir, it will pay you and pay you big. You can't afford to be without one.

Let me tell you something. There are millions of acres of land in this country today starving for want of manure—land that would pay a profit with the aid of manure and a manure spreader. There are a million and more farms in this country today without a manure spreader running at a loss that would pay a profit if the owner or renter would invest in one. That's what it is—an investment—a big dividend producer for any farm.

Now, I am dead in earnest about the proposition I made you at the top of this page. I am dead in earnest on this manure spreader proposition. I believe the manure spreader is the most needed tool on the farm. **No farm can afford to be without one.** Yes, sir, **I'll trade you any style or make of Galloway Spreader you want any time for 400 Bushels of Corn.**

Will you do it? Never! Of course you won't because I'd be getting the long end of the deal. **I know it!** But, that's just what the Galloway Spreader did for Mr. Crouch; produced 20 bushels more corn to the acre on 20 acres on the same identical ground—than he raised on twenty acres where he didn't use the spreader. Paid for itself the first season. Didn't it? And then paid good big interest the next season on his hay land. It will pay you just as well. Mr. Crouch could better afforded to have traded me 400 bushels of corn for his spreader than to have done without it for, it made him that much and more the first year, — while he has the use of the machine for years to come. So can you or any other man afford to take me up on my one-sided offer, but I don't ask it. No, sir, I don't ask one-fourth that much. My prices are so low and my direct from factory terms so liberal that any man can afford a Galloway Spreader.

Now here's the point. It doesn't make any difference whether you are a landowner or renter, you can't afford to be without a manure spreader—not for another day. If you're a landowner it will pay you a bigger profit out of your land and raise its value. If you are a renter it will help you pay the rent and make a bigger profit besides. The manure spreader means the same thing to either landowner or renter. **Bigger profits at the end of the year.**

That's not only my word for it—but, the word of thousands of business men farmers. A lot of them at first didn't believe their Galloway Spreaders would make them the profit I said they would—that today wouldn't sell their spreaders for many times what they cost if they couldn't get another one.

Borrow the money at the bank if you have to and buy one—or better still write me for my liberal time payment terms and let the spreader pay for itself. It will do it. Now, just note my new low prices on Galloway spreaders. Get my new catalog giving all the facts. Just fill in coupon below. Do it now.

WRITE ME TODAY For My NEW CATALOG Do It Now!

My Direct From Factory Prices Save You $25 to $45

$39.50 CASH WITH ORDER PRICE

Buys My No. 0 Wagon Box Spreader--- The Lowest Price Ever Made On An Attachment Spreader

My No. 0A Complete 50 Bus. Spreader Only .... $64.75 CASH WITH ORDER PRICE

The Lowest Price Ever Made On A Complete Manure Spreader

My spreader prices are slashed clear to the bone. You have never before in history had an opportunity to purchase a strictly standard, high quality spreader at such a never-before-heard-of price. Yes, sir, right at the start I will save you from $25 to $45 on the manure spreader you buy of me. Isn't this money worth saving? It certainly is and I know every business man farmer is going to take advantage of these new low prices. Investigate! That's what I want you to do. The more you investigate my prices, my spreaders and my direct from factory, one-profit-plan of selling the better I like it. It means in the end just one thing sure—a new customer and a new friend of the Galloway Way. Remember, my new low, unequalled prices are made possible by my dealing right direct with you—cutting out all middlemen's profits, all salesmen's expenses and dealers' bad debts. When you buy of me direct from the big Galloway Chain of Factories you have only one small manufacturer's profit to pay in addition to the actual cost of materials and labor that enter into the construction of my machines. Then back of every spreader I sell goes a strictly 5 year guarantee on materials backed by a $25,000 legal bond. With the most liberal **free trial offer** ever made. My spreaders must please you absolutely after a thorough test on your own farm or you can return them and I will refund your money and pay all the freight. Can you beat this offer? Never! Try the Galloway first, before you think of buying any other style or make of spreader.

Nine Different Styles and Sizes to Select From

You will find just the size and style spreader you want for your farm in the complete Galloway line at a price that will tickle your pocketbook. My attachment or wagon-box spreaders are the only successful wagon-box spreaders made, for their patented adjustable features are necessary. No other make or cheap imitations have these features. Remember the Galloway is the first and original wagon-box spreader. More of them in use today than all other makes combined. They will fit any style of farm wagon gear or truck. Four styles and sizes to select from.

My Complete Spreaders are unequalled—Trucks are detachable and can be used for other purposes. Three styles and sizes to select from. My big Jumbo, 80-bushel capacity spreader is a giant among spreaders and sells for only $93.50 f. o. b. Waterloo. My low-down, semi-underslung spreader is the last word in manure spreader construction. Light draft, two horses will handle it easily, large capacity, equipped with the proven Galloway features of mechanical construction—in a class by itself. Get my new catalog showing all my different styles and sizes. Do it now.

Trucks Detachable. Saves You $35 to $50

Don't forget this great fact. When you buy a Galloway Complete Spreader—My Famous No. 5, 60 and 70 bushel capacity machine for instance, you get a regular standard, wide track farm truck that you can use for other purposes. It is equipped with patented adjustable bolster stakes so it will take a regular wagon box, hay or hog rack or you can use it for hauling logs, etc. My spreader trucks are the best and strongest farm truck on the market. Made almost entirely of steel with flexible front trucks—cut under type. You can't buy their equal at a dealer's for less than $45 to $50. You save that much by buying your complete spreader of me, for I save you the price of an extra farm truck. These spreader-trucks are guaranteed to carry 6,000 pounds. Both my spreaders and trucks are sold under the strong Galloway Guarantee of your money back if not satisfied. Try them 30 days on your own farm, entirely at my risk with the money in your own pocket. Get my new special **30-day Free Trial Offer.** The most liberal offer ever made. Write me today for my catalog and full details of my offer.

Get My Special Offer

Then as a final clincher I have a new, special, cooperative, profit-sharing offer to make you that simply can't be beat. It will help you get your spreader partly or entirely without cost to you in the end. No canvassing or soliciting. Just the simplest business proposition you ever heard of. Write me today for my new spreader catalog and I will give you full particulars of my offer and send you also **Free** my valuable book of information "A Streak of Gold" which is worth the price of a manure spreader to you any time if you follow its common-sense suggestions on the proper use and care of manure. It's brim full of valuable information on this important subject. Send for my catalogs. Do it before you lay this paper down. DES MOINES, IOWA, THURSDAY, NOVEMBER 13, 1913.

A Practical Study of Failures to Get a Stand of Clover or Alfalfa

By C. S. Ellis

A FAILURE to get a stand of clover or alfalfa is not without a definite cause and it therefore becomes the the duty of every farmer who would be an enthusiastic and successful grower of either of these valuable crops to fully acquaint himself with the likely causes of a failure to get a good stand of clover or alfalfa and to do so economically and profitably with as little outlay for expense and labor as possible. This is not to say that the crop might not be worth all it costs to get it, but rather that we might use the time in tending some other paying crop or crops and that we might use our capital to the best advantage. The failure of clover or alfalfa to produce satisfactory results should be taken as a timely warning that something is wrong with the present system of farming operations and steps should be taken at once to find the trouble and to effect a remedy.

We cannot discuss all the problems of successful farm management in a paper of this sort,but we shall in stead discuss rather briefly some of the conditions which to the wrier's mind embody most of the common causes of clover and alfalfa troubles, and which we shall take up in the following order:

First, depletion of the original humus supply of the soil or loss from heat and drouth; second, winter killing; third, poor seed; fourth, lack of nodule forming bacteria; fifth, inadequate drainage; sixth, weeds; seventh, acidity of the soil or lack of lime; eighth, unsuitable soil—lack of one or more of the elements of plant food in soil.

One of the causes of clover and alfalfa failure which is coming to be recognized more and more is that of the depletion of the original humus supply of the soil by the continual croppings and insufficient returning of the same to the soil by means of manure and other vegetable matter. Depleting the soil of humus makes it less retentive of moisture, a serious defect in time of drouth, reducing the vigor of the plants and causing them to be more suceptible to the attacks of disease or insects and ill effects of heat and drouth. Then, too, when sown with a heavy nurse crop, clover and alfalfa are often put to a decided disadvantage, especially during the hot and dry weather of mid-summer when the maturing grain is demanding considerable moisture at this time, to the detriment of the crop which it is to give way to. At this season, too, it is usually the driest as well as the hottest, so that when the grain is harvested and the weakened clover plants are left exposed to the hot sun's rays and the drying and withering action of the winds, they are often unable to adjust themselves to the new conditions and die out or perhaps greatly shatter the prospects of a good stand.

AN EIGHTEEN-INCH SECOND CUTTING OF ALFALFA.

Where clover or alfalfa is inclined to winter-kill it is usually due to severe freezing, to smothering or to heaving of the soil. The best precaution which can be taken against injury to these plants by freezing is that of allowing a fairly good growth of the crop to remain in the fall to wither and lodge and serve as a natural mulch for the protection of the crowns of the plants and the roots as well. A covering of snow would answer the same purpose, though, owing to the uncertainty of it, it is best to provide a more sure means of protection. Care must be taken, however, not to get a little anxious about the welfare of the clover crop and to leave too much of it on the ground, as it frequently occurs that with a thick covering of snow or sleet in addition to the dense mass of cured vegetation the crop will be smothered. Six to eight inches high will be sufficient growth for the protection of the plants, depending upon the density of the stand, a thin stand being in less danger of smothering than a thick stand, consequently it could grow more rank than where the stand was quite thick with equally good results.

The lack of sufficient humus in the soil is not only a serious drawback during the hot, dry summer, but also during the winter, as well, when it permits of the heaving of the soil and the snapping of many of the tap roots of the clover and alfalfa plants. One writer states that a soil well filled with humus is "drier in wet weather, wetter in dry weather, warmer in cold weather and colder in warm weather." At any rate humus aids in the ventilation of the soil and in the water-holding and water-disposing properties of the soil and thus making it more elastic and easier to work and get in proper tilth. The freezing of the soil-water and its resultant expansion is bound to bulge the soil and to cause it to heave and snap the tap roots of the entrapped plants. Soil filled with the proper proportion of air instead of being filled with moisture allows for the expansion of the soil-water and the release of the entrapped roots from the resulting pressure which the freezing would exert upon them.

There is also a lot of poor seed on the market, but that is really no excuse for a clover or alfalfa failure, since good seed

PRECAUTION NECESSARY IN PASTURING STALKS.

An Indiana subscriber in a recent communication points out some of the precautions that should be taken both before and after turning livestock into stalk fields. Among other things he says:

As soon as husking is done farmers will turn their stock into the stalk fields and many ears of corn that escape the hands of the huskers will be found by the cattle and thus converted into beef or milk. This practice is always attended by more or less risk, however, either from overfeeding on corn, where the huskers have been careless and left a large number of small ears and nubbins, or from the so-called cornstalk disease, hence great care must be exercised for a few days in giving the cows the liberty of the fields.

There are seasons in which the loss of stock while running in the stalk fields is larger than others. Some stockmen are of the opinion that this loss is caused from smut on the corn and not from eating too much corn or stalks. It has been demonstrated, however, that smut is not very deleterious to the health of animals. We believe the greatest loss is due to the fact that oftentimes a sudden change is made from grass without any grain to dry feed that contains such large quantities of grain in the beginning. The grain is the first consumed by the animals, which will roam over the fields until the last ears of corn have been located and eaten. And if any losses occur at this time they are due entirely to the effects of overfeeding on such rich grain as corn.

The first precaution, of course, is to husk the corn clean instead of rushing along and leaving a big per cent of the ears behind as a large number of huskers do. Some ears will escape the hands of the most careful husker, but the quantity of corn thus left will not be so great as seriously to endanger the lives of the stock when turned into the stalks. As a further precaution, it is well to feed corn in small quantities while the cattle are still on grass and before they are turned into the fields of stalks. If this practice is followed for a couple of weeks, it will gradually accustom the animals to a ration of corn before they have the opportunity of filling themselves on the grain in the fields. Then, no matter whether the fields have been husked clean or not, keep on the safe side and give the animals the liberty of the stocks gradually. They should not remain in the fields more than fifteen to thirty minutes in the beginning. A hungry cow or steer will gather a number of ears of corn in that time which will be swallowed without much chewing. The time may be gradually increased from day to day, but care must be exercised to see that no animal in the herd suffers from the effects of eating too much corn. The regular grain ration may be discontinued for a time while the cows are running in the stalks, or until they have secured most of the corn that was left behind.

When the grain has been entirely exhausted, the stock will eat large quantities of the husks and other portions of the stalks which contain only a very small proportion of digestible material, especially when they have been long exposed to the weather. If the digestive organs are already crippled from eating too much corn, they are in no condition to handle properly a large mass of woody fiber, hence the so-called cornstalk disease is the natural result. Oftentimes no other roughage is given the animals while in the stalks, thus forcing them to subsist entirely upon the dry stalks and leaves. These contain so little digestible nutriment that the animals have to eat great quantities to keep themselves from starvation, and they overwork their stomachs to such an extent that disorders follow and death may claim some of them. The precaution to be observed in this connection is to give a regular morning feed of roughage before turning the stock into the stalks. The animals will then feel that they have something in their stomachs and so will not eat so greedily of the stalks. They should also have access to drinking water before going into the fields and again at noon. A good supply of salt and charcoal is also essential. These materials make a cheap aid to digestion and, in a measure, they will prevent the loss of life while the cattle are running in the stalks.

If the cornfields have not been seeded to wheat, the stalk fields should be pastured as early in the season as possible if the greatest benefit is to be derived from them. Where they are not utilized until late the stalks have been soaked by numerous rains and dried up by the sun and wind until there is very little nourishment left in them. Then, too, many of the blades and tops have been blown away by the wind and what remains is so dry and unpalatable that the stock will derive little benefit from it.

It frequently happens that certain individual animals in the herd are out of condition for one cause or another and we have found from experience that these are the animals that are usually injured when turned into stalk fields. Old cows will often go down the hill very fast when they have to be carried through the winter or even for a month or two on dry stalks. In such instances we think it is a loss purely and simply to compel animals that are out of condition or old animals to live on dry cornstalks. Loss of weight during the winter on any kind of a farm animal means an actual loss to the owner. Even in the case of dairy cows unless they are well wintered they cannot produce maximum returns the following spring and summer. In addition to the suggestions given by this subscriber we would like to add one, namely, that under certain conditions where it is the desire to keep animals in good flesh a little oil meal fed when they are running in stalk fields will contribute immensely to their thrift and will tend to eliminate the danger that frequently attends the eating of large quantities of dry cornstalks. A half pound or a pound of oilmeal daily for each animal will contribute much to healthfulness and to thrift.

WHEN THE FROST IS ON THE PUNKIN

WHEN the frost is on the punkin, and the fodder's in the shock,
And you hear the kyouck and gobble of the struttin' turkey-cock,
And the clackin' of the guineys and the cluckin' of the hens,
And the rooster's hallylooyer as he tiptoes on the fence;
O, it's then's the times a feller is a-feelin' at his best,
With the risin' sun to greet him from a night of peaceful rest,
As he leaves the house, bareheaded, and goes out to feed the stock,
When the frost is on the punkin, and the fodder's in the shock.

They's something kindo' harty-like about the atmusfere,
When the heat of summer's over, and the coolin' fall is here—
Of course we miss the flowers, and the blossoms on the trees,
And the mumble of the hummin' birds and buzzin' of the bees;
But the air's so appetizin'; and the landscape through the haze
Of a crisp and sunny morning of the airly autumn days
Is a picter' that no painter has the colorin' to mock—
When the frost is on the punkin, and the fodder's in the shock.

The husky, rusty russel of the tossels of the corn,
And the raspin' of the tangled leaves, as golden as the morn;
The stubble in the furries—kindo' lonesomelike, but still
A-preachin' sermuns to us of the barns they growed to fill;
The strawstack in the medder, and the reaper in the shed;
The hosses in theyr stalls below—the clover overhead!—
O, it sets my heart a-clickin' like the tickin' of a clock,
When the frost is on the punkin, and the fodder's in the shock.

Then your apples all is getherd, and the ones a feller keeps
Is poured around the cellar floor in red and yeller heaps;
And your cider-makin's over, and your wimmern-folks is through
With their mince and apple butter, and their souse and sausage too!
I don't know how to tell it—but ef sich a thing could be
As the angels wantin' boardin', and they'd call around on *me*—
I'd want to 'commodate 'em—all the whole-indurin' flock—
When the frost is on the punkin, and the fodder's in the shock.

—James Whitcomb Riley.

A MULTI-MILLIONAIRE OF THE FARM.

A writer in one of the large daily newspapers presents an interesting thought. He points out that practically every branch of human endeavor has produced multi-millionaires, with the single exception of farming, That there are farmers who have amassed a fortune out of the soil is not to be denied. The grain belt has its entry to make in the person of the late David Rankin, who started with nothing and died possessed of millions. But the country today cannot produce a single farm millionaire to rank alongside Carnegie in the steel industry, Rockefeller in the oil industry, Weyerhauser in the lumber industry, Spreckels in the sugar industry, and so on.

The point which the newspaper writer brings out is so interesting we print his views, at some length:

Immense fortunes have been made out of every great industry or business in America except one. Steel made Carnegie, Frick, Gates and scores of other men many times a millionaire. Oil made Rockefeller, Rogers, Flagler and that unmatchable coterie. Banking made Morgan, Drexel, Schiff and Stotesbury.

Street railways made Widener, Elkins, Ryan and Dolan. Tobacco made Duke, Brady, Garrett and many others. Railroads gave us Harriman, Gould, Vanderbilt, Huntington, Packer, Scott and an army of men who were immensely rich.

Anthracite coal has its company of barons, including Pardee, Markle, Coxe and Conyngham, while bituminous coal made such men as Stephen B. Elkins, Davis and Berwind. Powder gave Du Ponts to the world with all their millions.

Newspaper and magazine owners, merchants, lumbermen, brokers, builders and hotel proprietors all have furnished not one, but many very rich men.

But the greatest of all industries in America is farming, and who can name a man who has taken $10,000,000 from the soil? Many more people are engaged in agriculture than in any other industry, but where are the millionaires?

You can name a long list of chieftains—captains of industry—in every other trade or business, and yet the biggest of them all produces not one. Queer, isn't it?

But he is not content to speak of conditions only, he delves for a reason, a cause for the acknowledged effect. Here is what he finds:

For everything there is a reason, and there is a good one for this astonishing lack of millionaire farmers. Here it is: Farming is unorganized. It remains today as it was 100, even 300 years ago, an enterprise of individuals.

There is no combine of farmers and no trust. Every one is a small capitalist in himself. He joins with no one else, he retains his independence and he never loses his identity.

The farmer goes on today as his great-grandfather went before him—sowing everything except the seeds of fortune and reaping every crop except a million.

I have a strong conviction, but, of course, it can be nothing more tangible, that this condition will not last. I believe that some day we shall see Rockefellers growing corn and Carnegies in the wheat field.

A genius for consolidation will rise up and he will amalgamate two or three countries under his own control. It will require capital, but it also involved a billion and a half when United States Steel was born.

The extraordinary thing is that it has not been done before. We have big farms, of course. Dalrymple is known all over the land.

Col. James Young used to be called the Farmer King of Pennsylvania and his nine farms near Middletown are still show places.

But compare these great farmers with the leaders in all other forms of industry.

One cannot tell, but perhaps this very year some lad in one of the excellent agricultural colleges will have planted in him the thought of doing on the farm what others have done elsewhere—make a lasting name and a few millions at the same time.

It may be that the prediction will come true and that the next few decades will find a Rockefeller in the corn field, a Frick in the wheat field, a Morgan in the feed lot. It may be, and yet we doubt it. Farming does not loan itself easily to combinations in restraint of trade. Iron mines are comparatively limited in number, oil wells are not to be encountered the world over. Yet there is not a habitable country in the world (with the exception of the arctic regions) which does not possess tillable ground. A financial genius may buy up all the iron mines, combine all the steel mills, organize the oil industry into a coherent whole, but such work would be puny indeed, compared to the task of welding together the farming areas of the world, or even of one country. Aside from this, the very nature of farming is antagonistic to such combinations, upon which immense fortunes depend. Iron is iron the world around, oil is oil, and so on. But the land here produces that which the arable land elsewhere will not produce at all. And so conditions do not favor farming combinations as they do in the industrial world. It is a pretty picture the newspaper writer paints; we believe, however, it will never be looked upon in real life.

HOME MEATS ARE BEST.

Some of our readers are looking forward to hog-killing time, as indicated by the number of inquiries that are received relating to the curing of meat. One subscriber says that he has never had very good success in the curing of hams and asks for a little information along this line.

Good results in the curing of hams are often obtained, even though the same identical means are not used to accomplish them. A mixture composed of one-half bushel of fine salt, one-half pound of pulverized saltpeter, one pound of finely ground black pepper and four pounds of brown sugar will give excellent results if it is properly used. The hams should be thoroughly rubbed with this mixture, after which they should be placed in a box skin side down. It is a good plan to apply a double handful of the mixture to the fleshy part of each ham after it is placed in the box. A goodly coat of salt should also be used over the mixture so that adjoining pieces of meat will not touch. Every crevice between filled with salt and the meat should be allowed to remain in this state for at least a period of six weeks.

At the end of six weeks each ham should be dipped in a solution composed of one pound of borax dissolved in fifteen gallons of water. Follow this up by hanging it in a smoke house and smoke it daily for a period of two weeks over hickory wood and you will then have a product that cannot be excelled in the matter of quality.

About the first of April the hams should again be dipped in boiling water to cleanse them from all impurities after which they should be wrapped in paper, this in turn covered with cloth and the cloth covered with some cheap mineral paint. Hams handled in this way will keep indefinitely and those that are not needed for home consumption should bring the highest price if placed on the market.

SHREDDING CORN FODDER.

The introduction of the silo has solved the feeding problem for a great many of our readers. However, there are thousands and tens of thousands of acres of corn standing in shock in every state in the corn belt and to handle this fodder economically from the standpoint of labor is a matter of considerable significance. The plan of husking the corn from the shock, tying the fodder again and hauling it to the yards involves an immense amount of labor and even though one's time may not be so valuable in the winter is too valuable in most instances to squander that way. On the other hand feeding corn fodder without detaching the corn is a very hit-and-miss plan because it is almost impossible to know just how much corn one feeds.

The shredder in most cases solves the whole problem ideally. We are therefore making an appeal at this time to those of our readers who have had experience in shredding corn and will ask them to submit the results of their experience for the benefit of others. We will pay cash for such articles as are used. Those who contribute on this subject should go somewhat into detail as to methods of handling the corn, how the fodder is stored, whether in a sack or in a mow and where the various items of expense involved in the operation are clearly in mind we hope that these will be given in order that our readers may learn just how much outlay is involved in the operation of shredding.

THE PUBLISHER'S VIEWS —ON— TOPICS of THE TIME

James M. Pierce

THE LESSON OF THE ELECTIONS.

LAST week's elections were mainly confined to the East and South, yet the results are of interest to the farmers of the grain belt as straws showing how the political winds are blowing. The defeat of the Tammany candidate for mayor of Greater New York and the results generally show conclusively that the people are voting for the man rather than the party label and that the purification of politics, which began so auspiciously in the grain belt a few years ago, is being continued in the larger centers.

The most corrupt political organization in the country today is undoubtedly Tammany Hall in New York City. It has throttled the free expression of individual opinion, and profited by this thralldom, for years and years. The Tammany candidate for mayor was snowed under at last week's election, while the governor whom the Tammany boss had thrown out of office, William Sulzer, was elected a member of the legislature by an overwhelming vote. Now what does this portend to the grain-belt farmer? You say he has no direct interest in eastern politics. But I say he has an interest, and a very great and grave one, in the uplifting of American politics, in the chance of every voter to express his will unhampered, in the opportunity of the majority to rule. The nation, as a whole, cannot wax great and rich, no matter how prosperous and progressive is the grain belt, so long as these cancerous sores of graft exist on the body politic as they have existed in Tammany Hall and the interest-controlled sections of the East. Just as a chain is no stronger than its weakest link, so is no nation any stronger than its poorest or meanest or most ignoble state. The vote of a congressman elected to Washington by the corrupt and purchased vote of the Bowery district of New York offsets the vote of the most honorable and determined reformer or patriot elected by the farmers of the grain belt. Therefore the grain-belt farmer has more than an indirect interest in any election which shows that the sections of the country heretofore corrupt are becoming purified. The farmer's vote for an honest, upright man becomes that much stronger, because it is not killed by the vote of some city hoodlum for a man whose candidacy is a disgrace to the entire nation.

With but practically few exceptions the election results of last week show that the progressive spirit is still dominant. I do not mean the progressive spirit, in a partisan way. Each of the political parties has its progressive and its conservative members. Men who conscientiously look forward to the millenium are to be found in all parties, regardless under what name they go. In almost every case last week the party was successful which nominated a candidate from its progressive faction. The impetus which these victories gave to the campaign to free all the parties from the domination of the selfish interests can hardly be overestimated.

I, for one, am sincerely glad that the elections are over, although here in the grain belt we had but little of the red fire and the din of the campaign. What the country wants is a winter of business activity, with as little politics (and as little new legislation, for that matter) as possible. With the elections out of the way and much of the work of congress already accomplished, nothing is more to be desired than a long pull and a strong pull all together for a winter of brisk commercial activity, followed by a spring and summer of unparalleled agricultural prosperity. Let's each one of us do our share to bring this to pass.

ON GETTING TOGETHER.

I DO NOT believe there was ever a time when the farmers were animated with such a "get together" spirit as nowadays. Call it co-operation or just common sense, it is a fact that men on the farm are joining hands today, as never before, for a triple purpose: reduction of expense, enlargement of profits and increase of comforts and pleasures.

This thought was impressed upon me by a letter received from a subscriber in southeastern Kansas, who tells me of the formation of ice clubs among the farmers of that section last summer. The plan was extremely simple: a dozen or fifteen farmers formed a club, one member of which went to town every day, in hot weather, for a load of ice to be distributed to all the other members. When there were a dozen members it meant that each farmer had to make a trip to town but once in two weeks, while every day he had a fresh supply of ice. I had no more than read this letter when another reached my desk from a subscriber in Nebraska who tells me of seven farmers in his county who own a dozen silos and who help one another in filling them, owning a cutting machine and the necessary amount of pipe in common and paying one of their number for looking after the machinery and repairing it between seasons. By this means they not only enjoy one another's companionship while filling each other's silos, but they get the work done better and at less cost, as each man becomes unusually proficient in whatever branch of the work is entrusted to him year after year.

But this new "get together" spirit is not confined to such purely farm work, by any means. What are the road-building days which Missouri, Arkansas and Oklahoma have already celebrated, in response to the calls of their governors, but a new manifestation of the old spirit which found expression in the pioneer days in barn raising bees, corn husking bees and so on, but which has been dead (or, at least, sleeping soundly) for a number of years past? On these road-building days the farmers of the countryside turn out and work shoulder to shoulder on the roads, while the women folks come out at noon carrying baskets full of fried chicken, home-made doughnuts and all manner of good things with which to regale the inner man. There was nothing like that when I came out to the grain belt, from Ohio, forty years ago, and cast my fortunes with a Missouri farm. We hear a lot of talk about "the good old days." Let me tell you that when everything I possessed in the way of this world's earthly goods was wiped out in one day by a visitation of grasshoppers, there was no "get together" campaign against the common enemy then such as was found in Kansas last summer, when the state experiment station supplied the formula and the superintendents, the various counties provided the poisoned bran free and the farmers went out together, thousands upon thousands of them, on a certain day and by nightfall had destroyed millions upon millions of the grasshopper pests. Back in the old days we fought our battles ourselves and if we coundn't win single handed we went down in defeat. Today we have the benefit of free information from experts (in bulletins and reports), of actual example in the field, and if the hard times or the hard luck become too widespread the whole community or the whole state joins hands and fights it together. Take my word for it, "the good old days" were not one-half so good as the days of the present.

This "get together" spirit is one of the most hopeful signs of the times. One of the chief objections to farming in the old days was its so-called isolation or loneliness. You don't hear much, if any, of that kind of talk nowadays, thanks to good roads (making communication between town and country quicker and more pleasant), telephones, interurbans, automobiles, motorcycles and the fraternal way in which the farmer is welcomed to the churches, the lodges and the clubs of the nearby town. Farming was considerable of a one-man struggle for existence when I was a boy on the farm; today it is becoming an exact science in which men are learning that better and surer results are to be obtained by joining hands in co-operative effort, dividing up the labor, increasing the profit and adding the zest of companionship to the day's work.

It is my opinion, after more than forty years' farming experience right here in the grain belt, and two tours of investigation which took me through most of the agricultural countries of Europe and several in South America, that never has farming been carried on on so high a plane, with such splendid results and such a bright prospect for the future, as right here and now in the grain belt. The American farmer is to be congratulated upon attaining a high general average of prosperity and efficiency, surpassing that to be found anywhere in the entire world.

OPEN THE SCHOOLHOUSES.

GOVERNOR CLARKE, of Iowa, is to be commended for his stand in favor of making the rural schools the social centers of the various communities. The governor is a product of the farm and country town himself. He has hungered for the opportunity to expand his mind through intercourse with congenial spirits. He realizes that the great need of the country today is opportunity for mental growth, a stimulus to original thought, an incentive to look beyond the horizon and make our view world wide.

In the course of a speech delivered a few evenings ago the governor came out thus strongly in favor of the movement to open the rural schoolhouses nights and make them real community centers:

> Both schools and churches over the land represent great investments of money and are closed to the public the greater part of the time.
>
> There should never be a time in the life of any man or woman when they should cease their education. Making the schoolhouse a community center will develop human interest and human sympathy.
>
> The home is the first essential to the foundation of good citizenship. The discussion of home problems by a gathering of neighbors and authorities will add materially to the quality of the citizenship of the future.
>
> The home is the hearthstone of the community. Good fathering and good mothering can be augmented by making the neighborhood gathering the inspiration of that hearthstone.
>
> No one can be sociable unless he has something to be sociable about. The schoolhouse should be the place for the discussion of topics of general public interest, health, sanitation, ventilation and the care of the homes, for instance.

It seems odd that there should be any objection at all to so sensible a plan. Yet opposition does exist, mainly on the part of the thoughtless or indifferent. But the movement which Governor Clarke thus ably champions is gaining headway rapidly. I noticed by the Kansas City newspapers recently that the board of education of that city had let a contract for wiring school buildings which have been in use for ten and twenty years and even longer, but for which no lighting arrangements had ever been made. The Kansas City school board sees the handwriting on the wall; it takes the initiative in ordering something done which the people themselves will order done if the authorities do not act quickly. So long as a schoolhouse stands idle fourteen or fifteen hours out of the twenty-four it is failing in its great mission of educating the people. Education does not cease when we graduate from the grade school, the high school or even the greatest university in the land. It continues to the very hour of our death. Why, then, should not the schoolhouse continue its work until we are too old to totter to it any longer?

One of the greatest educational factors of a half century ago was the lyceum, where Charles Sumner, Henry Ward Beecher, Wendell Phillips and the other great thinkers of the day expounded the principles of liberty to a people hungering for such doctrines. One of the great educational factors of today is the Chautauqua. Call it "refined vaudeville" and make fun of the secretary of state, Mr. Bryan, for appearing on the same program with Swiss yodlers and bell ringers, if you will, the fact remains that the Chautauqua is doing more than any other agency today (with the possible exception of the press) to educate the rank and file of the people and crystallize public opinion. The Chautauqua is doing much that the schoolhouse should be doing. Why not, then, divide the work? Let clubs be formed, similar to the debating societies we had when I was a boy. Let these clubs be permitted to use the schoolhouses without cost, let them be urged to use them whenever they please. Let these clubs discuss current events in the light of history. Let them have their debates, their parties, their sociables, their musicales; every meeting will result in the enlargement of someone's thought, the broadening of someone's mind, to the end that a few years of the open schoolhouse will find the mental and the material standards of our rural life still higher than ever before. Governor Clarke has given a great cause a good impetus.

James M. Pierce

MIXED LEGUME SEEDING.

Those who are most enthusiastic in their endorsement of alfalfa and sweet clover do not always make it clear whether it is their recommendation that either one or both of these legumes be made to supplant the common red clover or not. However, we assume that in most cases their enthusiasm is based on the urgent need there is to increase the acreage devoted to legume growing and in this respect their teaching must be endorsed by all progressive men.

At a time when there is a very keen interest being taken in alfalfa and sweet clover as indicated by the demand for seed we would like to call attention to at least one advantage that might come from the plan of mixing the seed of at least two legumes before sowing. We know of a number of instances where men have used from one-half a pound to one pound of alfalfa seed per acre in conjunction with four quarts of red clover seed and four quarts of timothy seed and have been exceedingly well pleased with the outcome. The continuation of this plan means that the soil becomes infected with the alfalfa organisms so that when the time comes for sowing a field of alfalfa it makes a healthy growth and a strong stand right from the start.

The same also may be said of sweet clover. Although up to the present time possibly not more than one farmer in a thousand in the corn belt has made any attempt to grow this crop yet its economic value has been proven and we predict that the acreage of sweet clover will be greatly increased in the future. As is the case with alfalfa ground inoculation is necessary and the use of a small amount of seed in the regular meadow will in due

time inoculate the ground because unquestionably the germs are carried with the seed.

It must be remembered that either of these crops in the meadows will do no damage whatever, but on the other hand they will only supplement the clover and timothy. If, in the case of sweet clover, seed is produced this will do no harm, but only tend to thicken the meadow. In any event the soil will produce a larger crop of mixed plants at all times than will result from seeding any one of the crops alone.

HOG SHORTAGE NEXT YEAR.

Available statistics indicate that there will be a hog shortage next year. The ravages of cholera have greatly thinned out the 1913 supply, causing, in some instances, direct loss from the disease, but in most cases resulting in the premature shipment of light hogs. Central markets have been absorbing this light stuff for many months, taking it, in most cases, at a very low price, from 5 to 7 cents a pound, the same going over the retail counter later on to the consumer at about 20 cents a pound.

In view of the inevitable shortage we would like to call our readers' attention to the advantage there might be in keeping over an extra sow or two. Of course if even one sow extra could be kept on every farm in the corn belt this would add millions of hogs next year. One may be reasonably sure that a good gilt or brood sow safe in pig will sell for more than market price before spring so that in case there is not pen room for a larger number of brood sows than was planned on it will be absolutely safe to start out with a larger number, and if you have no use for her it may be depended upon that a neighbor will be glad to pay you an extra $5 or $10 for even a grade brood sow before farrowing time next spring.

In this conne tion we would like to call attention to a mistake that is altogether too common in the corn belt, namely, that of allowing the gilts that are intended for breeding purposes to run with the fattening hogs right up until breeding time. While we believe in having the breeding stuff in good flesh, yet, as a rule, when this plan is carried out they get too much corn and not enough supplementary food. Ordinarily it is a simple matter to cut off a piece of the pasture with woven wire fence and keep the breeding stuff by themselves so that they may be fed a little extra oilmeal or tankage, or, if nothing else is available, be fed liberally on either soaked barley or ground or soaked oats. Where this plan is followed the gilts and sows will be in much better shape to bring through strong litters than will be the case if they are stuffed with corn right up to the beginning of the new year.

EXPERIMENT STATIONS BEHIND THE TIMES.

On the whole, the experiment stations of the corn belt are doing a creditable work. They are making a dollar go just about to the limit and if in certain lines of effort they are behind the times it is largely because funds have not been forthcoming to carry on the work.

We have in mind at this time the great need that now exists for information in regard to the practical effect of stirring different types of soils deeply. Manufacturers are engaged in making deep-tillage implements and they have used them in localities where men by the score have given them the strongest kind of endorsement. They are able to bring to bear convincing testimony to prove that these implements, in reality double, or even triple, the area of a given farm by loosening up the soil in such a way as to give the roots of plants twice as much or three times as much area as formerly on which to feed. Where can we turn to find anything like convincing experiment-station evidence as to the effect of plowing land, say four, eight, twelve, sixteen and twenty inches deep? If there have been any experiments conducted at any station that actually settle this point on a given type of soil we are unable to find the results in bulletin form.

On the other hand, manufacturers of explosives are finding a very wide market for their product in certain localities where stiff subsoils are broken up by the use of dynamite. Men who have tried out this plan in a practical way endorse it over their own signatures and plenty of instances have been found where blasting the subsoil increased the crops at least 50 and in some instances 100 per cent. If even a proportion of the benefit that is said to result from this plan of breaking up subsoils is produced then the discovery is of great economic importance, but so far as we know the literature that comes from our experiment stations contains no data that we can find on this method of pulverizing the lower soil. One manufacturer calls attention to the fact that the profits to the company from such sales as could be made in 100 years could not possibly equal the benefits that would be derived by farmers in a single year if the subsoil were used by plants as freely as the surface soil. It is true that the manufacturer in both instances is interested from a business standpoint, but be it assured that anything like a large industry cannot be built up in the manufacture of products of this character unless it answers a very real and a very important need in agricultural practices.

We would like to see the stations get busy and do a little thorough work along these lines.

A HUMORIST ON ROADS.

George Fitch is a grain-belt humorist (likewise a member of the Illinois state legislature, notwithstanding the incongruity of the combination) who has an unusually happy facility for putting good things in few words. One of his recent articles deals with good roads and Fitch gives some definitions which are unusually felicitous. Thus, for instance, he says that "a good road is a road which has only two dimensions, length and breadth; a bad road has three, length, breadth and depth." There is not a farmer driving into town, in the early spring following a thaw, when the road seems bottomless, who will not appreciate the truth of what Mr. Fitch says.

But the grain-belt humorist has something even better than this in his recent article. We take the liberty of making a few scattering quotations:

A good road is merely a roof over a bad road. When an enterprising state has decided to pull itself out of the mud it roofs over mud roads with tar and gravel or macadam, and the farmers come to town in wet weather just as carelessly as if they were Noah and didn't care how much it rained.

Good roads are useful because they enable the farmer to market his hogs when they are ripe instead of when the roads are navigable by a wagon which isn't fitted with bilge keels and propellers. But they are also useful because they enable the tired man to climb into a nervous automobile and commune with nature far, far away from cabarets and pictures of September morn.

Some farmers speak of good roads with scorn for this reason and insist that they do not want the city ambling past their farms at the rate of sixty miles an hour. This is short sighted. After the city man has worn long, hot holes in the country atmosphere for a few years he knows enough about it to buy a farm and settle down when he has worn out. And this enables the farmer to sell the said farm and come to the city.

This world is full of give and take, and the farmer who does not give the city man a chance to breathe country air flavored with real estate will never have a chance to take $300 an acre from him for a nicely-equipped farm with all modern improvements, including a 1913 almanac.

There is a lot of good hard sense wrapped up in the facetious philosophy of Mr. Fitch and we commend the entire article to our readers' attention. Oftentimes interest can be awakened in a subject by light, breezy raillery, where a plain, matter of fact presentation of solid facts fails to make even an impression. If Mr. Fitch can rouse the public to the need of roads, by his splendid nonsense, he will be deserving of a public memorial.

PREVENTABLE FARM WASTES.

The United States Department of Agriculture has recently called attention to ways and means of increasing the output of meat from the average farm. First in importance is the prevention of waste. It is claimed, for example, that the improper handling of eggs alone causes an annual loss in the United States of $45,000,000. One-third of this loss is due to blood rings and these in turn are really dead embryos and an embryo can only develop in a fertile egg. Hens that do not run with male birds do not lay fertile eggs, but they lay just as many eggs as if the males were with them. The separation of the males from the females after hatching season is over would eliminate a very large percentage of the waste from blood rings.

Another factor to which special attention is called by the department is the loss of young animals. It is estimated that 30 per cent of all pigs farrowed alive die shortly after birth from various causes. The improper feeding of brood sows and the providing of insufficient shelter at farrowing time are chief factors that contribute to this loss. If this loss could be prevented and the right kind of management would result in this, the annual meat supply would be very greatly augmented.

Then there is the question of animal diseases including hog cholera, Texas fever, tuberculosis and infectious abortion. From these various causes the annual losses in the United States are estimated to go up into the hundreds of millions of dollars. In addition to the direct losses there is the indirect effect of diminished vitality or animals that do not succumb, but are more or less affected with these diseases. The prevention of these diseases is after all squarely up to the individual owner and to him we must look for the introduction of improved means of sanitation and the application of modern methods in dealing with diseases.

The scientific ventilation of stables alone coupled with the sensible use of tuberculin will in due time eliminate tuberculosis from the herds of the United States and the same means that are used to combat this disease will in a large measure contribute to the better health and to the greater vigor of bovines.

COMBINATION OF FOOD FOR COLTS.

An interesting experiment is being conducted at the Kansas station in which twenty colts are being used to test out different feeding methods. It is the intention to carry these colts until they are mature before a final report can be made.

These twenty colts are divided into two lots, one lot being fed oats in conjunction with alfalfa, corn fodder and pasture while the other lot receives in place of oats a ration consisting of 70 per cent corn, 25 per cent bran and 5 per cent oilmeal. This mixture is of exactly the same feeding value as oats from the standpoint of the chemist. The colts, however, have a different report to make and those that are receiving the mixed grain are making better gains and they are in better condition today than the colts that have received the oats. Furthermore, it is costing about 20 per cent less to feed the mixed grain ration than it does to supply the necessary amount of grain in the form of oats.

The experiment is in charge of Prof. C. W. McCampbell and he points out that a farmer can better afford to use corn at 85 cents a bushel, bran at $30 a ton and oilmeal at $40 a ton than to feed oats at 50 cents a bushel.

We believe that the outcome of this experiment will not surprise any man who has had anything like an extensive experience in feeding horses. While it is generally believed that oats are the best single grain that can be used for this purpose yet the food is always regarded as an expensive one and for that reason there is generally a little tendency to feed a ration composed too strongly of corn. When you compound a mixture composed of about three parts of corn to one of bran and then add to this about 5 per cent of oilmeal you then have a product that is exceedingly palatable and one that under ordinary farm conditions is not expensive. However, the experiment referred to is an interesting one and the final outcome ought to be conclusive.

THE FOLLY OF CROSS BREEDING.

This subject is called to our attention at this time by a Kansas subscriber who can see no good in the practice save in the first cross. Among other things he says:

It is yet possible to find many who believe in cross breeding. These converts to mixing breeds are usually very pronounced in their belief and they practice what they preach, even to mixing breeds of poultry as well as of livestock.

As a first generation proposition, cross breeding is excusable. Frequently, it does mean more prolific production, and the infusion of new and different blood may bring to this one generation certain good features that could not be obtained by breeding true to breed. When cross breeding is continued, however, we begin to see the folly of the theory. It makes no difference whether the stock is horses, cattle or hogs, the generation that comes from the cross does not produce equal to either one of the pure breeds. One authority likens cross breeding to taking a drink of whisky on a cold day, in that the effect is strengthening for a short time, but after that brief time the drinker is physically weaker than he was before. While the production of the cross breeding may seem to be strengthened, the second generation is not so good in quality as were either of the breeds used before the cross.

We have seen cross breeding tried in every way and with all kinds of stock. We have also seen it tried with grains, particularly with corn. In every instance no permanent good comes of it. On the contrary, we are only convinced in stronger terms than ever that the only way to permanent improvement is to keep breeds pure, and to maintain a rigid selection for quality of all stock used for breeding purposes. If any of your readers believe that cross breeding really pays, as a proposition to be carried on year after year, we should be very glad to hear from them and to have their reasons for such belief. A general discussion of this subject will interest a large number of your readers I am sure.

It must be remembered that even the first cross, if it works any improvement at all, must be made between animals of almost pure breeding. For example, good results cannot be expected from crossing grade hogs of one breed with grade hogs of another, because, according to the experience of all successful breeders, it is better to continue in the one direction in breeding operations. If Poland China blood predominates in a herd of hogs regardless of what other mixture there might be in the blood lines, then a Poland male should be used year after year. If for any reason the type is not satisfactory to the owner this may be more nearly corrected by using a male of the same breed but of the type that is desired than by crossing. In a measure, it is like threshing over old straw to preach this kind of doctrine, but it is known absolutely as a scientific fact that improvement lies in this direction and that the road to success can be covered much more quickly by such a plan than by indiscriminate crossing.

HOW SWEET CLOVER IMPROVES LAND.

Here is an interesting experience with the growing of sweet clover. It comes from a Kentucky subscriber, Mr. E. E. Barton:

In common with the experience of many other farmers, my first acquaintance with sweet clover was by fighting it as a weed; having employed hands to cut it out while in full bloom in efforts to eradicate it from my land. Soon after, I began to hear favorable accounts of the plant, especially as a fertilizer, and having much washed and thin lands that would not grow crops or grasses successfully, I ventured buying some seed and sowing where I thought it could not make matters worse, and might do some good. It did all that its friends claimed for it, and my lands that were in sweet clover two to four years began yielding again good crops of corn and tobacco. Land that will raise good tobacco must be good strong soil, and knowing the condition of these fields before sowing to sweet clover, I decided that there was nothing else that I knew of that would restore fertility as quickly as sweet clover. I planned my course from that, and sowed all the sweet clover I could, and bought up some cheap land that was idle, and sowed it to sweet clover.

My expectations were more than met, as I found it made excellent pasturage, and would graze more cattle, sheep or horses than our blue grass, and in the middle of the summer when the blue grass was dry and brown, the sweet clover was green and thriving. It stands dry weather better than any grass or clover that I have had any experience with. I never had to sell my cattle on account of shortage of pasture when I got plenty of sweet clover.

Other farmers around me began using it for hay, and I followed suit. All kinds of stock eat it as hay even better than as green forage. Some stock are a little slow to begin on it as pasturage until they become used to it, but let one steer or cow in the field start on it and all of them will be eating it as freely in two days. The hay does not seem to have the same amount of bitterness as the green forage, and that has the bitterness only about the time it begins to bud before blooming. When it is young and tender, it tastes as sweet as alfalfa or red clover.

Most all of us here sow sweet clover during the winter and early spring, by broadcasting on top of the ground. We sow it this way on small grain, and also in our pastures. The freezes and thaws work the seed into the ground, and we get the best germination by this method. It seems that the seed is slower

to germinate than red clover, and requires more time in the ground. The shell over the germ is very hard and requires time to soften so the little sprout can burst out. I have sown in the spring and summer also, and get good results if the moisture is sufficient. But winter and early spring sowing gives the best results, and is more convenient and less cost. For good germination, the seed bed ought to be firm, and when sown in cultivated fields, just enough of the surface should be stirred to cover the seed about a half inch. If the ground is specially prepared, it ought to have a rain on it to settle the soil, then sowed and covered with some implement that will stir the soil shallow. The seed should be covered when sown in late spring, summer and fall. It can be sown with oats in the spring by broadcasting after the oats are covered and while the soil is loose and crumbly. This way the seed will work into the ground, and the first shower that comes will cover it good. We have also sown it with corn when we laid it by, and it comes on and makes a growth of about fourteen inches in the fall, and then comes very early in the following spring.

This crop after all has more friends than we suspected and it is not surprising when we find so many favorable comments on the crop to see farmers in general showing a keener interest in the subject. Someone said to us a few days ago that the history of sweet clover growing would be something like the development of the Belgian hare industry, but we cannot endorse this view. The day will never come when the farmers of the corn belt will overdo the matter of growing legumes and rivalry between those who are championing the different species of legumes will, on the whole, contribute immensely to soil improvement.

Agricultural Co-operation for Providing Farm Labor.

THERE are few new things under the sun, but to the best of my knowledge the first American Co-operative Association organized expressly for the purpose of supplying farm labor has not yet been born; and in Europe perhaps the least developed and most rare form of co-operation is that concerned with supply or employment of human labor in agriculture.

Notwithstanding this, the distressing truth is that the problem of the supply of farm hands is almost universal. In common with the United States nearly every country in Europe is facing the question of rural depopulation and the insufficiency of field workers and house servants for all or part of the year. In many districts, both here and abroad, farmers are at their wits' end to procure hired help, and thousands have given up in despair and left the countryside or allowed arable fields to revert to brush and pasture and incipient forestation. Various attempts have been made to solve the hired-man problem, few of which have met with any degree of success; some of our most keen and practical agricultural experts have declared the situation insoluble.

The problem of farm labor has many phases and is complicated by a myriad of conditions, local, temporal, and inherent. The case of the berry grower who wants a hundred hands for light labor during the month of June is very different from that of the potato grower who needs a dozen strong men for three weeks in the fall, or the isolated grain farmer who demands one man for nine months and three additional hands in haying time and harvest. The number wanted, the season and period of employment, the character and race of the laborers sought, the sort of work, the locality of employment, the wages, hours, and conditions of service—these and other factors serve to complicate the situation and make consistent or uniform methods of meeting it impossible.

Though the United States has made no purposeful, organized co-operative endeavors in this direction, several sporadic, informal schemes for procuring labor without conscious, unified, or concerted action have been attempted with various degrees of success. Nevertheless any suggestions with reference to possible co-operative undertakings must be in the main based on theory.

The subject as given lends itself to discussion under at least four phases or propositions:

(1) The formation of co-operative societies, such as one finds in Germany or France, designed to procure groups of laborers from foreign countries or from urban centers to distribute under certain fixed contractual conditions among the individual members of the association. In other words, a co-operative farm-employment bureau.

(2) The co-operative employment and use of crews of laborers for special tasks on the farms of the members as, for example, in weeding vegetables, gathering fruit, etc.

(3) The co-operative or corporate association of the laborers themselves into companies for the purpose of performing certain services, such as putting up hay, gathering apples, weeding and hoeing sugar beets, stripping tobacco, and the like. Such associations of laborers are not unknown in Europe and are occasionally organized in the United States.

(4) Collective farming, either by small farmers or by gangs of laborers who obtain land on which to conduct agricultural enterprises in common. This may be called "co-operative production." Of the many collective farms in Italy, Hungary, Servia and other countries, by far the larger number are not communistic. The land is rented in a body by an association of peasants who then divide it into tracts which the members cultivate independently of each other. Some few collective farms, however, are really co-operative undertakings where all the co-operators work together in production.

With regard to the first proposition it would seem that some form of co-operative employment bureau might be of decided advantage, especially in procuring immigrant laborers for a given community or an agricultural sub-industry. One of the outstanding objections to agricultural employment on the part of immigrants is the fact that they must be separated from their own kind. If fifty Belgians, Germans or Poles could be engaged in one community instead of a solitary one or two, very much less difficulty would be encountered both in securing and in retaining them.

The business of such a society would be to ascertain the number and kind of laborers wanted within a limited area by its members, to fix the maximum and minimum wages, perquisites, and allowances, and to secure from each member a signed contract binding him to employ for a specified period the laborers procured for him by the society, whose specifications should be set forth in the agreement.

Furthermore, the contract should contain definite stipulations as to wages, hours, holidays, food, housing, duties, privileges and conditions of labor to which both employer and laborer must agree under penalty of such forfeit as the co-operative society may determine. The society should be responsible for the enforcement of the contractual obligations, under an agreement similar to that formulated by the beet-sugar corporations who provide the growers with laborers to cultivate their beets, the growers paying for the service at specified rates under a tripartite contract.

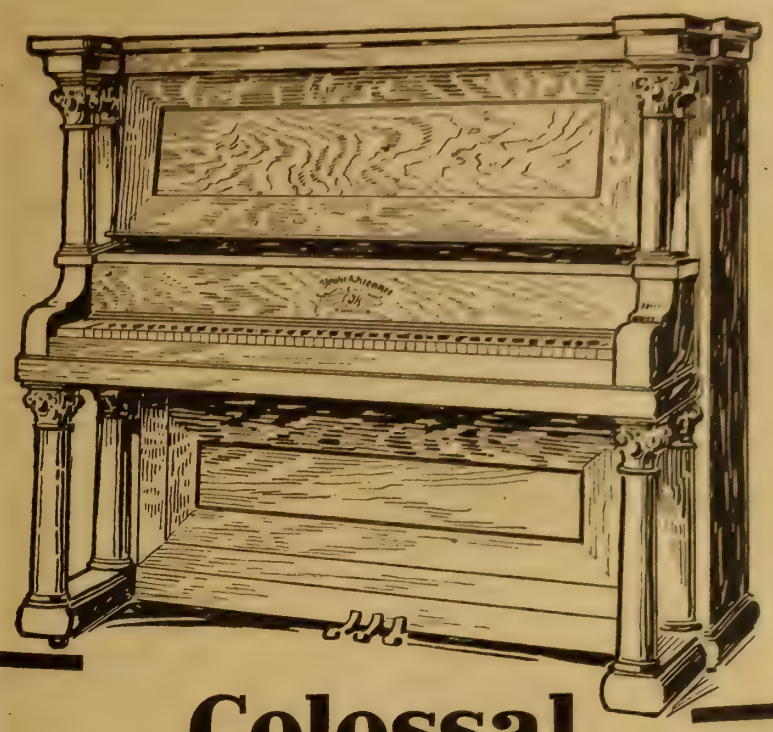
Several years ago in a certain tobacco section of the United States two large growers undertook to provide themselves and their neighbors with Polish and Lithuanian tobacco hands, somewhat as outlined above, at so much per laborer. They went to New York, employed an interpreter and secured their workers as they disembarked. The method worked successfully for several years until the immigrants, having learned the route, came directly to the locality in sufficient numbers without solicitation by the agents. That this would be the history and outcome of co-operative bureaus for similar purposes there is little doubt.

Moreover, such a society ought to co-operate with the state bureaus of employment and the United States Bureau of Immigration; it should be a local clearing house for agricultural labor and might set the standard of wages and conditions of farm labor in the community.

The details of a co-operative association of this kind would need to be worked out with some care to insure efficiency, economy, and mutual protection. But there is no reason to doubt the possibility and the feasibility of an organization to this end. In France two syndicates, as they are called, have been formed for the purpose of procuring Polish laborers directly from their native villages. It must be understood that the bulk of the Polish immigrant laborers are imported by private labor agencies, who have been exploiting the laborers and breaking faith with the farmers for private profit. The abuses which have arisen have been many, and it is chiefly to correct these evils that the co-operatives have been formed.

I believe that a local co-operative society, as outlined above, providing employment for fifty to 100 laborers throughout the year, might make known the opportunities for work on farms, enlarge the labor supply, provide more satisfactory laborers, relieve, to some extent, intermittent, seasonal congestion and scarcity of farm hands, and by acting as a clearing house for farm labor, lessen the number of idle days and lengthen the period of labor for the employes. Not the least of its achievements would be the standardizing of the wages and conditions of labor. Many of these results might be brought about by an agressive state employment office, but up to date the Kansas bureau seems to be the only one that has got in close touch with the farmers. Local co-operatives might as well serve the purpose of local agencies and operate as far as possible with the state office. This concentration and correlation of agencies will soon be

(Continued on page 15.)



Colossal Opportunity

For a Few Music Lovers

You can have a piano. Don't think you can't. When you know how this plan operates you'll be astonished! It's so easy! So simple! This plan overcomes obstacles! It does away with *all* the reasons you had for not owning a piano.

Yes, at one stroke it gives you the splendid instrument you've dreamed of. Maybe you've often thought of what music would mean to your home. You've yearned for the old-time songs and ballads, the airs you used to hear as a child. And you *know* your boys and girls will be better satisfied if right at home they have the music they now seek elsewhere.

And now here's the way you can get, and keep for your own, if you want it, a genuine Fuehr & Stemmer piano. Deep, rich, fervent tone! Smooth, easy action! Beauty of appearance! The artistic style, the wood of superb natural grain, the splendid varnish finish that you see in pianos sold in the big city stores. If you've ever listened to the limpid, bell-like notes of a Fuehr & Stemmer you don't need to be *told* that it's wonderful! You *know*.

Naturally our plan can't be offered to everybody. So we've decided that it will be

Given to the First People Who Write

Why We Can't Disclose All Our Plan Here

We don't want to waste our time or yours. If you don't want a piano it's folly to give you details. So we won't attempt to give our complete plan in this advertisement. However, to those music lovers who really want a piano in their homes and who will send us their names and addresses, we will give full particulars. We'll tell you just why and how such a radical, revolutionary method was adopted. And you who are sincerely desirous of owning a piano *cannot, must not* miss this chance, this plan that clears away all obstacles—so

Write if You Like Music and Want a Piano

and get in line for *your piano*. It's only a matter of days until you'll be in possession of your instrument, *if you're prompt enough to get in on this offer*. We suggest immediate action. If you want to, you may use the coupon—or a letter or postal. But act *NOW*.

Much as we should like to extend the marvelous advantages of our plan to *everybody*, the very nature of it makes it impossible.

If we could we'd offer it from coast to coast—to everybody everywhere. We can't, however, so we must ask you, if you really *want* this chance, to write—

Today

Yes, today's none too soon! As explained the first letters get first consideration. *If it comes to a question of who in your locality is to be given preference we, of course, expect to reward the early inquiries.* You can see that this is fair to you, fair to everybody. That's why we say write *now*, postal, letter or the coupon. Address your application to

Fuehr & Stemmer Piano Co.
18 E. 24th Street
Chicago,
Illinois

Fuehr & Stemmer Piano Co., 18 East 24th St., Chicago, Ill.
I should like to know about your new plan whereby I can secure a high-grade piano.

$1 90 FOR THIS DANDY GATE

These gates are not a special lot built down to a low price, but are full of the same quality, satisfaction and durability which can be obtained in any of our **triple-galvanized, high-carbon steel**

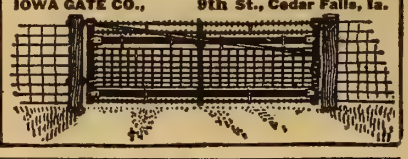
Iowa Gates

The filling of this serviceable and ornamental gate is extra close diamond mesh. Gate has strong frame, patent latch, etc. Comes in all sizes; plain and fancy tops.

Style E Farm Gate, illustrated below, is another leader sold at a much lower price than asked for other gates of its kind. Painted or galvanized. All sizes.

The best lumber dealer in your town has these gates on sale. If you don't know his name, write us for booklet, name of dealer, special prices, etc.

IOWA GATE CO., 9th St., Cedar Falls, Ia.



Get these Facts on KRATZER Quality BUGGIES

Don't buy until you've seen the Kratzer line. Let me send you our catalog and inside facts Free—showing exactly why the staunch, well-built Kratzer buggy is best adapted for your use on rough Western roads. Most economical in the end.

Sold by Best Dealers

Also ask your dealer to show you this KRATZER STORM AND WIND SHIELD; quick and easy to put on, gives perfect protection and is extra well made, two grades moderate prices.

Send for FREE Catalog

KRATZER CARRIAGE COMPANY 104 W. First St. Des Moines, Iowa.

GET Square Deal PRICES

[10]

Before You Buy Fencing

get Square Deal prices on the simplest, strongest, safest fence made. The Square Deal Lock double grips the one piece stay wires and the strand wires so they can't possibly slip.

SQUARE DEAL FENCE

stays tight and trim the year 'round. The one-piece stay wires prevent sagging, bagging and buckling. Send today for catalog, price list—get a copy of Ropp's New Lightning Calculator—All Free.

Dept. 24 Cleveland, Ohio

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Cleanliness is the first lesson that must be learned by the dairyman, and it must be learned so well that it becomes a fixed habit to bring success. There is no good reason why cleanliness on the farm should begin and end with dairying. If the same idea was carried to hog raising it is quite possible that we would hear less about hog cholera.

When it is cold and wet outside a little extra care should be taken to see that the calf pens are kept clean and dry.

I have discovered one drawback about the manure spreader and that is in case of a breakdown it means no more manure hauling until the break is repaired. Spreading manure with a fork after using a spreader is about like binding again by hand if the self binder should happen to be out of repair.

In buying new machinery it is well to have the idea of repairs and extra parts in mind because there is no machine made that will not break down some time and when it does the repairs are always wanted in a hurry.

Some take it that a heavy fall of snow early in the season is a sure indicator of a long stretch of fine weather to follow. This may be the case, but where there is work to do, it is well to make use of the first part of the stretch in hustling. The weather man changes his mind without notice sometimes.

The cheap alcohol that was to take the place of kerosene and gasoline failed to get beyond the talking stage. I have heard of talking whisky and of fighting whisky and was in hopes that this "working" alcohol would prove to be of great value in spite of the bad reputation of its relatives.

These long evenings are fine for reading and thinking, also for visiting, if the weather is right. Perhaps it is the visits to our neighbors that we fail to make that makes the farm seem so lonesome.

The reports of record-breaking corn husking make rather interesting reading, but it is the fellows that husk two good loads every day until the last ear is in the box that deserves the most credit. Record breaking usually means one hard day's work and a week or more of bragging.

Mail carriers are very accomodating fellows, but it is unreasonable to expect them to pick pennies out of the mail boxes after cold weather comes.

Why is it that every man thinks his scales are accurate and that his dog does none of the sheep killing?

"Don't tell me that a silo without a roof keeps as good as one with a roof," says a neighbor who has two silos, one with a roof and the other without. Last week he finished putting a roof on the one that was roofless.

The public now has a different feeling towards threshing rigs traveling the roads. Once upon a time, when a threshing rig broke down a culvert, the owner of the rig was blamed for it; now the people believe culverts should be made strong enough to hold up such traffic.

It is a good time to have a clean-up of all tools that may be scattered around the premises. Of course it is hoped there is a place for everything and everything in its own place, but a snow falling upon the average farm usually covers more or less that should be covered by a roof instead.

A window full of blooming plants lends a cheer to a room through the winter season, but I must say a good deal of fuel is required to keep them from chilling. They tell me coal is going to be higher and higher as the cold weather comes, and realizing that many folks must have it regardless of price, no doubt the mine owners will see that the price does not grow less.

Grain is too valuable this year to be hauled in a wagon box with a leaky bottom. The price of a very few bushels would buy an entirely new box.

I am wondering if the large farmer, with a great deal of heavy hauling, could not make profitable use of the two to three ton truck. Heavy hauling on the roads is harder on the work teams than any other work they do.

The litter of pigs coming into the world at this season of the year requires good shelter for the winter and good care and feed. I have had a few November and December litters to care for in years past, and my honest belief is that it does not pay to have them come at this season of the year.

AN "INTERNATIONAL" INVESTMENT.

Contrary to the generally accepted belief the exhibitions of livestock in the United States are the greatest in the world. Not only are the displays of animal excellence themselves superior to all others, but the equipment for the staging of the shows and the accommodation of the visiting public is far better and more comprehensive than in any other country. Vast improvements have been made the past year in the setting of the International Livestock Exposition, which will this year be held from November 29th to December 6th. Concentrated, though safe and sanitary stabling and display of the animals, commodious lecture halls, a magnificent exhibition arena, together with all the necessary comforts for visitors—all, as it might be said, beneath one roof—form a combination not hitherto contemplated in connection with any livestock show.

In no other country is the show yard so closely associated with the national educational system, in none is the whole scheme and plan of exhibition arranged so that each season's prize winners may be brought before a court of last resort for final alignment, as at the "International," which will this year be held from November 29th to December 6th. Here alone of all the great world's shows may the best of all useful breeds of farm animals be seen in their foremost estate in one grand display.

In the United States we have the best, and the best of the best may be seen each year at the "International." Many foreign countries have great individual exhibitions, but by common consent of the world's highest authorities, the "International" is an easy leader. At this show may be seen the pick of the foremost foreign breeds massed together well-nigh beneath a single roof.

Gathered in their thousands at the greatest railway center in the world, the animals of the "International" offer a liberal education in themselves to all who care to study them. Here all of our master breeders, and many from foreign climes, take post-graduate courses. Money paid out in attending the show is regarded by them as the most profitable, sound and remunerative investment they can make.

To keep up with the trend of livestock breeding, the farmer and stockman must needs attend the "International." He must study the work of the judges, and if he cares to, and goes the right way about it, he may learn from the lips of these judges their reasons which governed their awards.

It is a show by the people, for the people, of the people. Its guiding principle is the greatest good to the greatest number. It offers a matchless opportunity to study, to learn, to meet and know the master minds in livestock circles. Any farmer who fails to attend the "International" deliberately deprives himself of an asset—a valuable asset which in after years would have bulked large in his store of knowledge and beyond peradventure in his bank account also.

Heals Sore Hands

Huskum quickly heals cracked, sore and chapped hands. Unequaled for men who do rough work—corn huskers, farmers, lumbermen, mechanics, teamsters, etc. Toughens the skin, but keeps it soft.

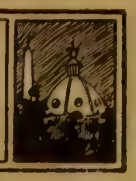
CURRENT EVENTS



LAST week's election showed democratic victories extremely gratifying to President Wilson, Secretary Bryan and others at the head of the national administration. In New Jersey, President Wilson's home state, the democratic candidate for governor, James J. Fielder, was elected over the republican candidate by 20,000 plurality. This was particularly pleasing to President Wilson, as he had spoken for Governor Fielder and written in his behalf. For the president to win out so handsomely in his home state, where the opposition in his own party is strong, is a sign that he has not lost standing since his remarkable victory at the polls a year ago. In Massachusetts the present lieutenant governor, David I. Walsh, a democrat, was elected governor by the largest plurality ever given to a democratic candidate in that state, more than 50,000. Second on the list was the progressive candidate, Charles S. Bird, a remarkably strong and worthy man, while the republican candidate, Augustus P. Gardner, a son-in-law of the standpat senator, Henry Cabot Lodge, trailed along in third place, the first time the republican party has even been relegated to that position in the Bay state. In Maryland the democrats were equally successful, the returns showing that Blair Lee, democrat, will be elected to the United States senate, to succeed the late Isidor Raynor, by fully 35,000 plurality. Inasmuch as Secretary Bryan has campaigned in Maryland for Senator Lee and strong opposition had arisen to him, because of the fact that Lee is opposed to prohibition in the liquor traffic, the result was pleasing to the national administration, showing that the Bryan prestige is not on the wane in the party. Virginia likewise went democratic, as was to be expected, as there was little or no opposition. Honors were divided between the parties in the municipal elections held over the country, the main interest centering in the state elections in the eastern states, where the democrats won handily.

MEXICAN affairs are once more critical. During the past week, President Wilson sent a formal note to General Huerta declaring that unless he (Huerta) immediately resigned the presidency and abdicated the office without leaving any of the members of his official family in charge, he (Wilson) would ask congress to authorize him to deal with the situation as the emergency demands, with force if necessary. Up to the first of the present week no formal action had been taken by Huerta in reply, although the United States war department has rushed several additional regiments of troops to the Texas frontier. Immediately upon receiving the notice from President Wilson, General Huerta called a meeting of the foreign diplomats in Mexico City, with what result is not yet announced. The Huerta government is practically bankrupt, a fact which makes it impossible for Huerta to assume the independent air he would like to assume. If the United States refuses to recognize him it will be practically impossible for his government to borrow funds abroad with which to keep the wheels running. The first result of President Wilson's firm attitude will probably be to allow the Mexican rebels, or constitutionalists, as they call themselves, to receive arms, ammunition and even funds from the United States, after which they will be in a much better position to overthrow the Huerta regime. The next few weeks promise to be busy and important ones in the relations between the United States and Mexico.

TAMMANY HALL, the corrupt democratic organization in New York City, was ingloriously defeated at last week's election, its candidate for mayor being beaten by the fusion candidate, John Purroy Mitchel, by almost 125,000 votes. The New York campaign was even more bitter and personal than usual. When the campaign started there were three candidates, but Mayor Gaynor died a few weeks ago, leaving the contest to be fought out by Mr. Mitchel and the Tammany candidate, Judge McCall. The winner is a young man, barely over thirty-six, and was appointed collector of customs at New York recently by President Wilson. He is said to be a clean-cut, honorable man of whom much is expected in the way of a clean administration for America's greatest city. Not only did Tammany lose out on the mayoralty, but it lost practically all its candidates for the board of estimates, the organization which holds the city's purse strings. The Tammany boss, Charles F. Murphy, is now almost down and out, as he has no influence or representation with the democrats in authority at Washington, at Albany or even in his home city. President Wilson has fought Tammany, the present governor of the state refuses to take his orders from Tammany, and New York City has administered the organization a crushing blow. It begins to look as though the purification of politics in New York were going ahead without any stop or hindrance.

EARLY returns indicate that the movement to issue $50,000,000 worth of state bonds in Pennsylvania with which to build permanent roads was defeated at last week's election. Practically all the newspapers of the state supported the plan, which was to permit the state to issue bonds to anticipate a ten-year special road tax, while most of the political candidates were favorable to the project. The result would indicate, however, that the people are not yet ready to add to their already heavy taxation burden. Either that, or the Pennsylvanians were not assured that the road campaign had progressed to a stage where the work can be carried on, on so large a scale, economically and efficiently. Pennsylvania has been graft ridden for many years, so possibly the voters are still suspicious.

EDWARD MORRIS, head of the great Chicago packing company of Morris & Company, died during the past week at his home in Chicago, practically of overwork. He was only forty-seven years old, but had devoted himself so untiringly to building up the great business of which he was the head that his life was shortened many years. Mr. Morris was the largest individual stock holder in several of the strongest financial institutions of Chicago, the market value of his stock being almost $4,000,000. In the will of his father, the late Nelson Morris, the building of the vast Morris fortune was attributed largely to the activity of the eldest son, Edward, who began his business career when a mere boy and continued it without flagging until poor health caused him to drop out a few weeks ago. Mr. Morris was one of the ruling powers of the Chicago stock yards and well and favorably known to thousands of stockmen, who mourn his untimely demise.

WILLIAM SULZER, governor of New York until three weeks ago, is again in public office. No sooner had he been deposed from office, having been impeached by the New York legislature, than he announced his candidacy for the legislature on the progressive ticket, he having been a lifelong democrat. At last week's election he was returned to Albany by an overwhelming vote, the entire east side, where he lives and where he secured his political start, rallying to his support practically to a man. The governor had hoped that the progressives would hold the balance of power at Albany so that he could be elected speaker of the house, but the republicans control the legislature, so that his ambition in this respect will not be gratified. Governor Sulzer made his campaign for the legislature on the issue of anti-Tammany. He claims that he was not impeached because of any discrepancy in his campaign accounts, but because he refused any longer to take orders from the Tammany boss, Charles F. Murphy. The people evidently believed that Sulzer was the under dog and was not given a square deal in his recent trial before the legislature. He has posed all his life as a friend of the people and while he is now exposed as somewhat of a demagogue his public career is by no means ended. It is highly probable that he will be a better public servant henceforth, as he is ambitious to climb up the ladder again and has learned his lesson.

Merchants situated so they get some farmer trade and some from townspeople, tell us their farmer trade is the cream, since the sales made are almost invariably larger to the farmer and the payment in cash or produce, which is the same thing. The town man buys in small lots and usually pays at the end of the month.

ROOFING SALE More than $325,000 worth of every make and kind of brand new, dependable roofing now being offered at such remarkably low prices, that we ask all in need or who contemplate buying to hesitate placing orders until they get these remarkable

Bankrupt

Prices. Mayer HONORBILT WORK SHOES

Mayer Honorbilt Work Shoes outwear all other shoes because they are made from specially selected, tough and seasoned stock—heavy oak tanned soles—solid counters—double leather toes and double rows of stitching. They stand hard knocks and rough wear, yet are not heavy or clumsy looking. For strength, wearing quality and comfort demand Mayer Honorbilt Work Shoes.

Made of "RESISTO VEAL"

The uppers of Mayer Honorbilt Work Shoes are made of the wonderful wear-resisting leather "Resisto Veal"—the new leather that resists even ammonia of the barnyard, and the alkali in the soil, and remains soft and pliable. This is the best wearing leather ever put into work shoes.

WARNING—Always be sure and look for the Mayer name and trade mark on the sole. If your dealer cannot supply you, write to us.

We make Mayer Honorbilt Shoes in all styles for men, women and children; Drysox, the wet weather shoe; Yerma Cushion Shoes, and Martha Washington Comfort Shoes.

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

THE STATUTE OF FRAUDS.

The law commonly called "The Statute of Frauds" originated in England in 1677, and was designed to prevent the commission of frauds and perjuries by requiring certain kinds of contracts to be made in writing and signed by the parties. The principle was adopted generally in this country, and similar laws have been enacted in all the states, differing somewhat from each other in minor details, but substantially the same in effect.

Contracts About Real Estate.—Contracts for the sale of land, or any interest therein, must be in writing and signed by the parties, in order to bind them. This includes leases of land for more than one year, an oral lease for one year or less being valid. In Iowa it has been held that an oral lease for one year, to commence some time after the making of the bargain, is valid and binding, but this doctrine is denied in some other states, where the courts hold that an oral lease is only good for one year, beginning at the date of the contract. Any contract which is not to be performed in one year from the date of it must, as a general rule, be put in writing and signed by the parties, in order to bind them.

Contract to Pay Another's Debt.—Such contracts must be in writing. For instance, if I owe you money, and my brother, father or friend tells you that he will pay the debt, you cannot hold him to his promise, unless it be in writing. This doctrine applies only to debts already made, or injuries already done, for if I tell a merchant to sell you goods and charge them to me and I will pay, I am liable for their value, although my promise is merely oral. This is so because you were not indebted when I promised, the debt being the result of my promise. This distinction is important.

Promise of an Executor.—The promise of an executor or administrator to pay a debt of the estate which he is administering, out of his own funds, must be in writing and signed by him, or it cannot be enforced by law.

Contracts in Consideration of Marriage.—A man and a woman may mutually promise to intermarry without any writing whatever. The court cannot enforce such promises literally, but can award damages against the party who fails or refuses to comply with the contract, but if a person promises to pay something, or do something in order to induce another person to marry either the promisor or some other person, such promise must be in writing or it cannot be enforced. This rule applies to all promises or contracts made about advancements, settlements of property, etc., where the consideration therefor is marriage.

Sale of Personal Property.—In Iowa all contracts in relation to the sale of personal property when no part of the property is delivered, and no part of the purchase price is paid, must be in writing. In Missouri a sale of personal property for less than thirty dollars, need not be in writing, but if it involves that much or more, it must be in writing, also representations of assurances concerning the character, conduct, credit, trade, ability or dealings of another person must be in writing in order to bind the party making them.

In Wisconsin, Minnesota, North Dakota, South Dakota and Nebraska contracts for the sale of personal property for $50 or more must be in writing, unless part of the property is actually delivered, or part of the price paid. In Minnesota agreements extending the time of payment for manual labor in hauling, cutting, banking or driving logs, beyond the time of completing the labor, must be in writing. In Kansas the law provides that every sale or conveyance of personal property, not accompanied by an actual and continual change of possession, shall be void as against purchasers without notice, and existing or subsequent creditors, until it is shown that such sale was made in good faith and upon sufficient consideration.

Part performance of an unwritten contract that ought to have been written will make it good under certain circumstances. To have this effect such part performance must be of such a nature as to place the parties, or one of them, in such a situation as to render it difficult or impossible to restore them or him to the condition occupied before the contract was made. For instance, mere payment of the price of land is not sufficient, but part payment combined with taking improvements will, as a general rule, render an unwritten contract for the sale of real estate valid and binding. Many kinds of oral contracts are valid and binding, but they are often misunderstood by the parties, and have to be settled by an expensive lawsuit, in which it is frequently difficult to prove by witnesses exactly what were the actual terms of the contract. For these reasons we think that every important contract which requires some time for its performance should be put in writing and signed, whether the law requires it or not.

LAW QUESTIONS CONSIDERED

WIDTH OF ROADS—WORKING ROADS.

A Subscriber, Coatesville, Mo.—(1) How wide must a lawful public road be in Missouri? (2) When working the roads how near to my fence along the side of the road, can the road boss plow in the roadway?

Answer.—(1) Not less than thirty feet wide, to be determined by the county court. (2) The road boss has a right to plow right up to the established line of the roadway, if necessary for the repair or betterment of the road.

FISH AND GAME LAW.

A Subscriber, Plainfield, Iowa.—I was recently informed that the supreme court has decided that the law of Iowa forbidding persons who own land on both sides of a river to use seines in such river is unconstitutional, and, therefore, void. Has such a decision been rendered?

Answer.—We have carefully examined the Iowa reports up to No. 154, and find no such decision. We think such a decision has not been rendered.

PARTITION FENCE.

A Subscriber, Friend, Neb.—A and B own adjoining quarter sections of land in Nebraska. A has constructed a woven wire partition fence between the two places. Can he compel B to pay for half of said fence, and if so how shall he proceed to do so?

Answer.—He can compel B to pay for half the fence, if it is a lawful fence. He should select one fence viewer, and request B to select another to determine the value of the fence and make the necessary orders. If B fails to select a fence viewer for eight days after being so requested, A can select both, and they will meet and determine the matter. If they should be unable to agree, they will select the third one, and a decision of two of them will be binding.

DISPUTE BETWEEN LANDLORD AND TENANT.

A Subscriber, Farmington, Ill.—B leased A a farm for 1912, and gave two notes for the rent payable at a certain bank, one due September 1, 1912, and the other due March 1, 1913. The lease stated the land to be so many acres, more or less, and it actually was about five acres short. B was to sow grass seed to be furnished by A, and to make certain fences with wire to be furnished by A, but A failed to furnish either seed or wire, and B got the same at his own expense and also some tile that A directed him to place. B was ready to pay the first note when due, but A did not have the note with him, and on March 20, 1913, B was ready to pay the second note, but wanted A to settle with him for the seed, wire, and tile which B had furnished, and A refused to do so; also he did not have the notes with him, and B refused to pay unless the notes were surrendered, and put the money in the bank and it is still there. In February, 1913, B with A's consent moved to the country where the notes are payable. (1) Can

A recover interest on the notes? (2) Can B hold A liable for the five acre shortage in the land? (3) What can B do to compel A to settle the matter?

Answer.—(1) A cannot recover interest on the notes after the time when the money was placed in the bank to pay them. (2) The lease having described the land as so many acres more or less B cannot hold A liable for the shortage. The words "more or less" cover such shortage. (3) The only way for B to compel A to settle for the seed, wire and tile is to sue him for the value of the same.

WIFE'S SEPARATE PROPERTY.

A Subscriber, Prophetstown, Ill.—A and B are husband and wife, and have children. B has an inheritance coming from her own people. (1) Can A lawfully claim it, or any part of it as his own? (2) What steps can B take to have said inheritance go to her children after her death?

Answer.—He cannot. B is entitled to said inheritance, as her own separate property. (2) B can make a will devising and bequeathing all her separate property to her children.

DETACHING FARMS FROM VILLAGE

A Nebraska Subscriber.—A few years ago a village in Nebraska, in order to incorporate, took within its limits several adjacent farms. The village has grown, and the owners of the farms wish to withdraw them from the village, and the town board is willing this should be done. What legal proceedings are necessary to do so?

Answer.—The owners of the farms must file a petition in the district court praying that their lands may be detached from the village, and cause a copy of this petition to be served on the village board within ten days. Then if the village board passes a resolution consenting that the court may make a decree detaching said lands, and files a certified copy of such resolutions in the district court with the petition, the court will render its decree accordingly, and a certified copy thereof can be filed and recorded in the village records.

NOTE AND MORTGAGE IN NORTH CAROLINA.

A Subscriber, Haverhill, Iowa.—I have a note for money secured by a mortgage on land in North Carolina. I have been making my home in Iowa for the last two years, and have the note and mortgage with me. (1) Should I pay taxes on the note and mortgage in Iowa or in North Carolina? (2) The note was made payable in twelve months from date, but interest has not been paid every year. Can I collect compound interest? (3) Should I have the note and mortgage renewed?

Answer.—(1) You should pay taxes in Iowa. (2) You cannot collect compound interest unless the note or mortgage expressly provides for such interest. (3) A mortgage is barred by the statute of limitations of North Carolina, in ten years after the debt is due. There is no need to renew the note and mortgage unless they are in danger of being outlawed.

STRAW ON RENTED LAND.

A Subscriber, Reinbeck, Iowa.—In 1912 A rented a 240-acre farm from March 1, 1913, to March 1, 1914. Eighty acres of this farm was situated nearly a mile from the other part of it. The owner sold the eighty acres in 1913, possession to be given the purchaser on March 1, 1914. The straw that was harvested on the eighty acres in 1912 is still on it. Have I the right to haul this straw to the other part of the farm, the 160 acres where the buildings are, while I hold possession of the rented premises? Nothing was said in our rental contract about this matter, but it was orally understood that I was not to sell or burn any straw.

Answer.—The straw on the eighty acres does not belong to you, because it was harvested before your term as tenant commenced, but if your landlord consents to it, you have a right to remove the straw to the 160-acre tract before the first of March, 1914. The purchaser of the eighty acres has no right to the straw unless the owner of the land actually sold it to him. It did not go with the mere purchase of the land, being personal property.

INHERITANCE IN ILLINOIS.

A Subscriber, Monmouth, Ill.—Where a person in Illinois dies without making a will and leaves personal property and has no kin nearer than nephews and nieces, are first cousins entitled to any part of the estate?

Answer.—They are not. The nephews and nieces are entitled to the whole estate.

REWARD OFFERED BY GOVERNOR.

A Subscriber, Redding, Iowa.—Has the governor of Iowa the power and authority to offer a reward for the apprehension of guilty parties in a murder case?

Answer.—The law of Iowa provides that whenever the governor is satisfied that a crime has been committed within the state, punishable by death, or imprisonment in the penitentiary for a term of ten years or more, and that the person charged therewith, has not been arrested, or has escaped from arrest, he may in his discretion offer a reward not exceeding $500 for the arrest and delivery to the proper authorities of the person charged, which reward, upon the certificate of the governor, that the same has been earned, shall be audited and paid by the state.

NOXIOUS AND OTHER WEEDS—NEW LAW.

A Subscriber, Neola, Iowa.—What is the new law in Iowa concerning the destruction of weeds on the public roads?

Answer.—The law passed by the 35th general assembly provides that all owners, occupants, or persons, companies or corporations, in control of lands in Iowa, improved or unimproved, including rights of way and depot grounds, and lands in which the public has an easement for roads, streets or other rights of way, and all other lands shall cut, burn or otherwise destroy all noxious weeds at such times as to keep them from blooming or coming to maturity, and keep said lands free from such growth of other weeds, so as to render travel safe, and not interfere with the construction or re air of streets or roads, and shall cause to be cut, near the surface, all weeds on the streets or highways adjoining said lands, between the 15th day of July and the 15th day of August in each ear. Upon failure to do so, the board of trustees or city authorities may order the same to be done within a certain time, giving notice to the owners, and, upon failure to comply with such order, the trustees or city authorities may cause the same to be done and assess the cost thereof as a special tax against the owner and the land. Any township trustee, road officer or other officer, who fails or neglects to perform his duties under said law is liable to a fine not exceeding $100. This law took effect in May, 1913.

UNCOMPLETED SALE OF LAND—COMMISSION.

An Iowa Subscriber.—A listed his eighty-acre farm for sale with B an agent, at the price of $125 per acre. B then sold the farm to C, who owns an adjoining place for said price as listed. B made out the contract of sale and had C sign it and C at once gave his check for $500. B then asked A to sign the contract, but he refused to do so and will not carry out the deal. (1) Can C compel A by law to convey the land according to the contract? (2) If C cannot have the land can he recover damages from A? (3) Can B recover commission from A for finding a purchaser for the land at A's price?

Answer.—(1) C cannot compel A to convey the land because there was no written contract to that effect signed by A. A contract for sale of real estate must be in writing signed by the parties, or their duly authorized agents. (2) C cannot recover damages from A for failure to convey the land. (3) B can recover from A whatever amount of commission was agreed upon between them, for finding a purchaser at A's price.

DISEASED HOGS—DAMAGE BY HORSES.

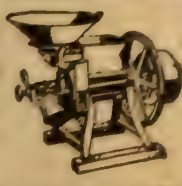
A Subscriber, Vail, Iowa.—(1) A and B are neighbors and the public road runs between their farms. About a month ago A lost most of his hogs by cholera and a week or so afterwards some hogs he had left came over to B's hog yard and fought with B's hogs through the wire fence. B drove them home several times and requested A to keep them there, but the hogs continued to come and lie around on the outside of B's fence next to his hogs. In about ten days B's hogs became sick and are dying off. What recourse has B if any? (2) A allows his horses and cows to run in the public road and his horses come up to B's fence and fight across it with B's horses and paw down the fence, what can B do about it?

Answer.—(1) The law of Iowa provides that it is unlawful for any person negligently or wilfully to allow his hogs, or those under his control infested with any disease, to escape his control, or run at large. The penalty for a violation of this law is a fine not less than $5 or more than $100 or jail not exceeding thirty days, or both. B can also sue A for damages and recover for all loss he suffered by infection of his hogs, caused by disease from A's hogs. (2) B can recover damages from A for loss caused by A's horses under the circumstances stated above.

It is estimated that the losses to farmers in the vicinity of Harvard, Illinois, from hog cholera ravages will reach about $100,000. One farmer suffered a loss of $1,100.

Get Our Low Factory Prices

Before Buying a Grinding Mill



No matter what kind of grinding you wish to do—grain, mixed or separate, ear or shelled corn, meal of any grade, from the coarsest to the finest, husks as well as cobs and corn—one of our

23 Styles—Hand Power to 20 h. p.

will meet your particular requirements, giving the utmost satisfaction. The best and cheapest on the market, Quaker City Mills will grind anything grindable, whether wet, dry or oily.

The mission of

Quaker City Mills

is to please every one. Our offer of 10 days' free trial enables you to test the mill in any way you choose, at our risk. We pay the freight. 47 years of world wide reputation for fair and square dealings back of every mill.

Deep Cutting Axes

LIPPINCOTT, HUNT'S, ROB'T MANN, RED WARRIOR, and BLOOD axes, are all, every one, made of high carbon bits, welded to softer steel bodies. The soft steel takes up the shock that breaks the one-piece steel axe.

Yes, American Axes are thin axes—and as a result, the DEEPEST CUTTING Axes ever sunk into wood.

What do you want an Axe to do? Cut; cut deep; cut easy; cut clean. You can't expect an axe shaped like a cold chisel to be a sweet chopper, to cut deep and clean.

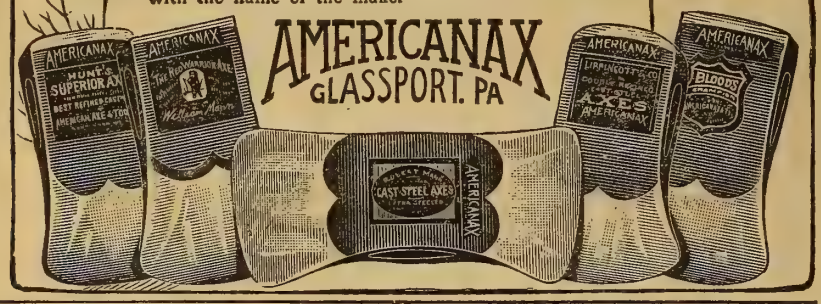
The American chopper says: "Make 'em thin, as thin as possible, just so they don't stick." And we have listened to those men--we have made American Axes thin where they OUGHT to be, thick where they MUST be, but always shaped to cut deep.

That's WHY the Rob't Mann, the Lippincott, the Blood, the Hunt, the Red Warrior are favored by real timber men all over the world --even Northern Europe, the home of cheap things, demands these axes.

Can you do less? Can you, in justice to yourself, overlook these Axes that have conquered the world?

Even in this country you see as many as a hundred different imitations of these old "stand-by's." They are under all sorts of names and labels, but all are *paper labels*, none stamped in the steel with name of maker.

Imitations have a paper label only, but our axes are stamped deep in the steel, where it can never come off, with the name of the maker—



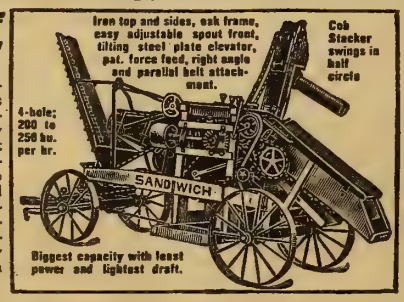
SANDWICH Iron sides CORN SHELLERS

Turn Idle Power Into Gold!

Every winter—when your team or engine is idle—you can clean up $600 to $1000 shelling corn for farmers all around you. Lots of hustlers with Sandwich Shellers make more than that. Figure your nice fat fortune in five or six years. Yet the Sandwich will mint you money for a life-time! *William Arnold, Red Oak, Ia., shelled 1400 bu. in 7 hrs. last Fall with a Sandwich 4-hole-in constant use since 1868!*

Beware of "Copies"

The world's first Power Corn Sheller was born in our factory before the civil war. Now most makers copy it—as far as the law allows. Others try to substitute. But all have failed. For imitation means limitation. Without Sandwich inventions they can't equal Sandwich performance.



Your Own Terms

We cut out the jobbers' profits by selling direct to you through our own organization of branches and agencies everywhere. You get the terms you want besides. And you pay us from your first year's profits--the easiest way to get in the shelling business.

First call—Top pay

You will get them both from Farmers who hire their crop shelled. They've learned from boyhood that the Sandwich *no-choke screens* turn the corn out clean as a whistle—soft, sound or frosted. Then the corn grades highest. So Sandwich sales lead other shellers 300%.

FREE Sheller Book

Wherever you live, however much or little corn to shell, this Free Book shows a Sandwich Sheller to meet your special needs. It gives you the heart-to-heart facts on sheller construction and operation. A postal brings it postpaid. It's your first step. Write today.

2

Killing and Dressing the Hog.

THE hog that will dress out about 200 pounds is the most satisfactory to kill. Larger hogs are harder to handle, the meat cools slowly and is liable to spoil before thoroughly cured.

A great deal of time and trouble can be saved if the tools and other equipments for killing and dressing the hog are gotten together beforehand. There should be a scalding barrel and a table for scraping set in a convenient place. The lower end of the barrel should be dropped into the ground about six or eight inches that it may be held firm when leaned against the table at an angle of forty-five degrees. The table or platform should be made strong and solid so that persons can work freely when standing upon it. A rifle, sharp butcher knives, meat saw, hog hook, knife sharpener, and gambrel sticks are some of the tools needed.

If the water is boiling hot when poured into the barrel, the temperature will have been reduced to 185 degrees by the time the hog is ready to be scalded. The water may be heated on a cook stove or out of doors in a large kettle with feet set upon bricks. Pieces of iron or flint rocks may be heated under the kettle to be used for keeping water in barrel to the scalding point.

If a quart of wood ashes, a tablespoonful of concentrated lye, or a little soft soap is added to the hot water, the hair and scurf will slip more readily.

Some farmers prefer not to stun the hog before sticking it. It is simply caught by putting a slip noose about the hind foot, then thrown on its back, one man holding it by its front feet while the other sticks it. A great majority prefer to stun the hog with an ax or shoot it between the eyes with a target rifle. The rifle proves very satisfactory, as one is not compelled to get close to the hog, thereby exciting it before it is killed, neither is the hog's head bruised as with an ax.

The hog should not be scalded until life is entirely extinct. The blood in the small surface vessels will be cooked, giving the hog a reddish tinge after being scraped. After throwing the hog on the table, test the water, and if it is the right temperature just slip its head and forequarters into the barrel and turn him slowly to avoid cooking the skin. One can easily do this by catching its hind feet, one in each hand. In a few minutes draw it out and let it air for an instant, then slip back into the barrel. When the hair slips freely from the shoulders and head the scalding is complete. The hog should be pulled from the barrel, turned quickly and other end slipped into the barrel. The hog hook may be inserted in the lower jaw, and it can be easily turned about or drawn from the barrel.

When the hog is sufficiently scalded it should be drawn from the barrel and the hair removed from the feet, ears and snout at once, as these parts cool more quickly. This can be done by grasping the parts in the hands and twisting round and back on them. After these parts are cleaned straddle the carcass and use a scraper which may be a well-sharpened corn knife. The hair and scurf will be readily removed with this instrument by catching an end of it in each hand and scraping briskly from shoulder to ham. The small patches of hair that remain may be scraped away with knives. Throw hot water from the barrel over the hog and scrape or shave off all remaining hairs.

The gambrel cords that run from hocks down to the big toes must be drawn out. With a sharp knife cut the skin from hock to toes. Run the knife on each side of the tendons in order to sever the branches that run to the dewclaws. Slip the thumb beneath the tendons and insert one end of the gambrel stick, which should be from sixteen to eighteen inches in length. Having placed a box or table beneath the place for hanging, lift the hog to it and draw to place by means of rope tied to center of gambrel stick and thrown over pole or rung in ladder. The gambrel stick may be made secure by a strong wire about pole.

Throw over the suspended hog a couple buckets of hot water and scrape off all filth from tail to snout, then rinse him with cold water. Sever the head from body by cutting around the neck at point where he was stuck. The bones in the neck may be disjointed by taking the snout in one hand and holding the other hand to back of the neck and giving a quick jerk of the snout. Put the head in a bucket of cold water and all the blood will be drawn out.

In removing the entrails with a sharp knife separate the hams down to the aitch bone. This joint may be severed with the meat saw if not with the knife. After making an incision into the abdominal cavity, run the two front fingers of the left hand just inside with back of hand to the intestines. Now cut between the two fingers, running them down as flesh is severed until the breast bone is reached. There will be no danger of cutting an intestine by this method of operation.

Split the breast bone with the knife or an ax. Cut around the rectum, freeing it. Tie it close to the opening so no refuse will drop out. The hand may now be slipped behind the intestines and paunch, and they can easily be pulled out into a tub held just above the fore feet. The liver, heart and lungs may be removed by severing the artery that runs along the back bone, then lifting them out with the hands. At once strip the gall duct from the liver, taking care that none of the contents come in contact with the liver. Wash the blood spots from inside the hog by dashing a bucket of cold water into it. Spread the hog to cool by means of a small stick running from side to side.

It will no doubt be wise to let the hog hang out until after sundown unless the weather is very cold. The idea is to get all the animal heat out of the hog before cutting it up. Unless this is done the joints are apt to sour when salted down. A cooling of from thirty-six to forty-eight hours will be necessary when mercury runs from thirty-two to forty degrees above zero. At night the hog may be placed on a screened porch or hung up in the meat house, but be sure it is beyond the reach of cats, dogs and the sneak thief.

Put the hog on its back on a table or box two feet wide, three feet long and two and a half feet high. With a knife cut across the hog's flanks, severing the hams from the rest of the body about an inch above the point where the hip bones join the back bone. The leaf fat may now be removed by running the hand beneath it at front part and gradually lifting it out. Lay the hams to one side and with saw sever the ribs on either side of backbone, then saw down between the backbone, and each shoulder, spreading the hog apart all the while. With a knife cut through the hog on each side of backbone.

Remove the long strip of fat from under side of backbone for lard and cut away the surplus lean meat for sausage. As the hog is now divided into two parts the ribs may be removed very easily by running a knife beneath them near the shoulder. Cut a slit between two front ribs, catch the fingers of the left hand into it and pull forward at the same time cutting beneath the ribs and as close up to them as possible. After the ribs are removed, the shoulders should be trimmed of all bloody scraps.

The strips of tenderloin lying along the back part of the sides should be pulled loose and the sides severed from the shoulders and trimmed of all surplus strips of fat. If desired, the sides may be rendered into lard.

In trimming the shoulders, cut away the brisket flaps, trim off a part of the neck portion and round the corners, making the shoulders appear as smooth as possible. Saw off the feet, leaving a stub about three inches long.

The hams should now be placed on the table and separated by sawing on either side of the tail bone. The tail bone should be trimmed of the fat and laid aside. From each ham remove the triangular part of the flank. Each ham should be rounded by sawing off the point of the bone that joined the

vertebrae and cutting away the points of meat. Saw off the feet two inches above the hock and the ham is ready to be cured.

In cutting up the head, remove the ears with a sharp knife. The lard may be fried out of them in a pan with the skins. Divide the head into four parts. Cut down between the jaws with ax or hatchet, then sever the two parts in halves. The brains may be removed from their cavity with a tablespoon. The four parts are now small enough to be cooked in a vessel until the meat separates from the bones. It might be well to cut away the jowls for lard before dividing the head.

A PRACTICAL STUDY OF FAILURE TO GET A STAND OF CLOVER.

(Continued from page 3.)

can usually be obtained if one is only willing to pay enough to get it. It is not so much a question as to the high price of high-grade seed as it is why buy weed seed and clover or alfalfa seed of low vitality because it is cheaper than the best seed practically free from weed seeds when the farm is already overstocked with weed seeds of all kinds. Clover and alfalfa seed to be bought to the best advantage should first be submitted to the state experiment station where it can be examined for impurities, their kind and extent and where a reliable germination test can be made of the same. An advantage in the purchasing of good home-grown seed which is not appreciated as it should be, is that clover and alfalfa seed obtained from one's neighbors is less likely to contain impurities foreign to the neighborhood while, too, it is often possible to select seed from fields known to be free from dodder and other objectionable weeds.

When the proper bacteria are present in the soil, clover and alfalfa and the other legumes develop nodules upon their roots in which the free nitrogen of the air is so changed by the enormous numbers of these bacteria living within these nodules that the plants are able to make use of it in their growth and development. To determine whether or not the soil contains these bacteria of such vital importance to the legumes, pull up some old clover plants which are usually to be found in the fields and examine them for the small nodules or knots on the roots. If they are present there is no need of inoculating the seed or the ground, while if they are not present, it is well to either inoculate the seed itself with a pure culture of nodule bacteria which can be obtained at most any of the up-to-date seed houses with directions as to how this operation is done or to inoculate the field with from 100 to 500 pounds of soil per acre from a field which has shown a good development of the nodules. The latter way has an objectionable feature, however, in that there is a danger of introducing seed of objectionable weeds or of spreading plant diseases which is done away with when the first method suggested is employed and a pure culture is used to inoculate the seed instead.

No definite depth of the ground water as the most favorable to crops can be given, as it depends largely upon the nature of the crop, its root system and habits, and the nature of the soil in which the crop in question is growing or about to be grown. Thus while alfalfa finds itself hampered when the ground water is less than five feet below the surface of the ground because of its deep-rooting habit, clover may be grown where the water level is not within a foot or more as deep, even three feet being sufficient. Experience has long since settled on the proper depth at which to lay drains limiting the rise of ground water at from three to five feet in clay soils, four feet being a common depth.

Plant roots always penetrate less in clayey soils than they do in sandy soils. This is in conformity with the fact that in the humid region, anyway, the four feet of clay loam soil is commonly considered as sufficient to meet the needs of a crop, such portions usually being the richest in plant food so deep that a deeper penetration is not necessary, while on the other hand, the sandy soils being usually poor in plant food necessitate that the roots penetrate to greater depths in order to obtain the same amounts of plant food. Land of a rolling nature and with good natural drainage will offer but little, if any, trouble along this line and it is for this reason that those advocating the trial patch of alfalfa in the last few years have invariably advised the using of land with good natural drainage as one of the main qualifications in selecting the trial plot. We are all more or less familiar with the benefits of drainage and that it not only improves the fields in wet weather but also makes the moisture in the soil more available in a drouth, as well, but let this one benefit suffice, as it relates to the topic being discussed.

Everyone is aware that weeds and good crops of any kind cannot grow and develop on the same field at the same time. Nevertheless it is perhaps well to mention it again, as it is essential that there be no weeds to hinder the slowly-growing clover and alfalfa plants from gaining a foothold in the soil. Pains should be taken to have the seed bed in as good a condition as possible so as to give the crops a fair chance to get a good start and to maintain it until firmly established. It may be of interest to note in the mention of weeds that dodder is one of the worst weeds with which the clover or alfalfa grower has to contend, as dodder trouble is chiefly with these crops, since they ripen at the same time as their parasitic foe and their seeds are so near the same size as that of dodder as to make an absolutely pure sample from an infested one practically impossible. Not only do the seeds mature at about the same time as clover and alfalfa, but they also germinate just a trifle slower, so that they really appear at about the same time as the host plants. Care in introducing this weed is much more practical than its extermination, as it is very hard to eradicate it after it is once established. Three things

Save $50 to $300

Yes sir, you can positively save that much *or more* by buying your gasoline engines *direct from the manufacturer.* I am out to triple my gasoline engine business and I'm going to do it because I am making three engines where I formerly made one and I'm making prices that are selling them like wild-fire. Before I started manufacturing gasoline engines and selling them direct to you farmers, dealers used to get $225 to $300 for 5 H. P. Engines that were far inferior in quality to the famous 5 H. P. Model which I put on the market at the unheard of price of only $99.50.

Now I Am Making a Still Bigger Cut Just notice my new prices, only $99.50 for my famous 5 H. P. engine and other sizes in proportion. Here's your chance to get an engine this year at a price never before equalled—an offer made possible by my increased production. Act quick—these prices are good for 60 days only. Write me today for my big engine catalog and special 1913 offer that will help you get your engine partly or entirely without cost to you in the end. Don't wait. Don't put it off. Write to Galloway today.

GALLOWAY GASOLINE ENGINES

I can ship you any size from 1¾ H. P. to 15 H. P. either stationary or mounted on hand or horse portable trucks or equipped with wood-sawing outfit. Over 30,000 in actual use today in all sections of the country and 31 foreign countries, and all sold on a positive 30 day Free Trial Privilege backed by a $25,000 legal bond and a 5 year warranty on materials.

Free Service Department: My corps of engine experts will tell you how to install and use your engine and equipment to the best possible advantage. This service is free to users of Galloway engines.

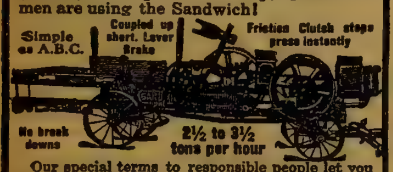
My Big Engine Catalog tells all about the complete Galloway line—my big Pumping Engine Catalog shows my unequalled line of pumping engines and several special outfits. Write today for catalog desired and new, special 1913 offer. Do it before you lay this paper down. Just address:

Wm. Galloway, Pres., WM. GALLOWAY CO., 15 Galloway Sta., Waterloo, Iowa

We can ship same day order is received from either Waterloo, Chicago, Kansas City, Council Bluffs or Minneapolis warehouses 515

SANDWICH
(solid steel—money maker)
Motor Press

Puts you—or your boys—in the big paying, fast growing business of baling hay! "Net profit $18 to $22 per day," write Swartz & Mensch, Dixon, Ill. Other hustlers making $200 to $300 net profits monthly. And these men are using the Sandwich!



Our special terms to responsible people let you start with little money. And you pay from your profits. Unless we knew the Sandwich will make you stacks of ready cash, we could not sell this way.

Gas Engine on Same Truck

Here's the most complete hay baling outfit in existence. Full power is driven from engine to press by heavy steel roller chain. It does away with slipping belts. The Gas Engine is the best quality—hopper cooled type—gear driven magneto—4, 6, 8, and 10-horse power.

The Sandwich has a simple time-tried self feeder and a big feed opening. A great windrow baler. Beats every ordinary press from 2 to 8 tons daily. 25 tons are an everyday job for the Sandwich; often 80 to 40.

This Book FREE

Write today for postpaid copy of this amazing story of profits others are making. And if you are interested in **Horse Power Presses,** let us tell you about our large line. Address

10 WEEKS—10 CENTS

If you will send us the names of five persons interested in the progressive cause.

LA FOLLETTE'S WEEKLY, Dept. PF
MADISON, WIS.

The above is a good likeness of the splendid Scotch bull, Arabella's Crescent Knight 263032, that will be sold in the dispersion sale of A. H. Metier, Weldon, Iowa, on November 20th. He is a son of the great bull, Imp. Crescent Knight, and his dam is Imp. Arabella by the great bull, Watchman.

A Real Hog Waterer For Cold Weather.

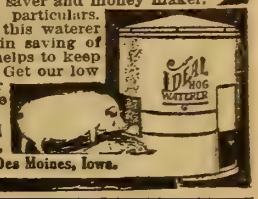
Supplies Water With Chill Off at All Times

Reduces feeding cost 25 per cent. Hogs do better and put on more weight with less feed when properly watered.

Give the hogs good clean water with chill off and they will drink frequently both night and day. No ice to chop—no worry.

IDEAL Hog Waterer Cannot Freeze

Keeps water warm in coldest weather. Made of heavy galvanized iron. Durable, sanitary, automatic feed, no valves to get out of order. Inexpensive to operate. Easily filled. A time saver and money maker. Write for full particulars. Find out how this waterer pays for itself in saving of feed—how it helps to keep hogs healthy. Get our low prices and our liberal guarantee. Write today.



The National Manufacturing Co.,
1723 Locust St., Des Moines, Iowa.

$35.00 A WEEK

START in business for yourself and make $35.00 to $50.00 a week handling our big, modern Line of Sanitary Medicines, Spices, Extracts, Stock Remedies, etc.

No Capital Needed—No Experience Necessary

Our line is the easiest to sell, gives the best satisfaction to customers, pays the biggest profits. Our free booklets explain why. Write today for full particulars.

FURST-McNESS COMPANY
23 Liberty St.
Freeport, Ill.

Pull Stumps

Double your profits! Farm *all* your land! Don't let stumps stand in your way. *Pull them out.* Clear an acre a day with the

Hercules All Steel Triple Power Stump Puller

30 days trial. 3 year guarantee, special price offer *now.* Write postal for book and money-saving offer.

Hercules Mfg. Co.
941 22d St., Centerville, Ia.

1½ H.P. GASOLINE ENGINE $24.75

Simple, durable, powerful. Carefully made to give satisfaction. 34 sizes and kinds. Shipped anywhere on trial. Fully guaranteed. Send for Big 48 page Catalog. It will help you to buy a better engine for less money.

OTTAWA MANUFACTURING CO., 511 King St., Ottawa, Kansas.

10c. gets 1 fine Signet Ring, 1 Watch Chain, 1 Fountain Pen, 1 Whistle, 1 im. gold Tooth and 20 Fun Cards. To introduce our big CataLog we send all above postpaid for 10 cents. 3 lots 25c.
STAR CO. 1131 MONROE ST. CHICAGO.

E. Myers, President, E. Myers Lye Company

It's HOG WORMS—Not Cholera That Kills The Most Hogs

Real hog cholera—the disease that is caused by a certain germ—is by no means as common as many farmers and hog raisers seem to think. In fact, it is rather rare. Yet every year an epidemic breaks out and sweeps the country like wildfire, killing thousands of hogs and causing millions of dollars loss. An enormous part of this disease is caused by **worms.** The symptoms are similar to those of cholera—the hog snoops around, his flanks "flop," hair sticks up, tail hangs down, he coughs, eats little, gets thin. You think he has cholera, but he hasn't. **Rid him of the stomach and intestinal worms that are sapping his vitality and strength and he'll get well. You can quickly rid all your hogs of worms by mixing with their feed twice every day according to directions on every can a little**

Merry War Powdered Lye

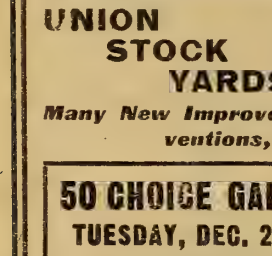
Hog raisers declare it is **a dependable destroyer** of hog worms. It makes hogs strong, healthy, fat and sleek, tones up the digestion so that all feed is changed into firm flesh and juicy fat. MERRY WAR POWDERED LYE is likewise the **safest preventive of real hog cholera and the best hog conditioner** the world has ever known. Keep your hogs on a MERRY WAR POWDERED LYE feeding from weaning until marketing time—they'll never know a day's sickness and will weigh heavy. Feed **twice every day** according to directions printed on every label.

About Vaccination I've no doubt that vaccination, as a preventive of cholera, has done some good. But it is an expensive and difficult treatment. It guards only against the specific cholera germ. It does **not** destroy hog worms, make sick hogs well, or thin hogs fat. So why use a treatment which is more or less of an experiment, when you can so easily get MERRY WAR POWDERED LYE, which **actual experience** in thousands of cases has **proved** to be a **dependable, safe preventive of cholera, destroyer of worms** and a **wonderful hog fattener?**

Beats Everything As A Worm Destroyer **A. U. PATE, Blue Jacket, Okla.** "I have been feeding Merry War Powdered Lye to my hogs for worms. It beats everything I ever saw."

10c A Can At All Dealers

MERRY WAR POWDERED LYE is for sale at most grocers, druggists and feed dealers everywhere, 10c per can (**120 feeds**). It is convenient to buy in case lots—4 dozen cans $4.80. **Costs only 5c per hog, per month, to feed regularly**—by far the best and much the cheapest hog insurance you can buy. If your dealers can't supply you, write us, stating their names. We will see that you are supplied, and also send you, **free,** a valuable booklet "How To Get The Biggest Profits From Hog Raising." **Order direct from us in case lots (4 dozen cans $4.80) if your dealers won't supply you.**



There Are No Substitutes

Don't experiment with ordinary, old-fashioned lye. **It might prove dangerous.** MERRY WAR POWDERED LYE is the specially prepared lye that is **safe** to feed to hogs. Full directions on each can.

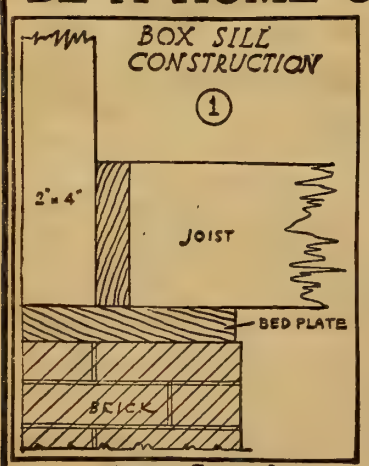
BE A HOME CARPENTER



CYPRESS "THE WOOD ETERNAL"

THIS NEW, FREE BOOK, "SHORT CUTS to GOOD CARPENTRY on the FARM."

Will help any Boy or Man who is at all handy with tools to learn much of plain, useful carpentry. As *Rural Life*, Rochester, N. Y., puts it: "It is a Guide Book for the Man or Boy who can handle a saw or hammer and wants to know how to use them to the best advantage." And that is true. It also tells much about the value of Cypress Lumber and Shingles.

BULLY BOOK FOR BOYS

It has 48 pages and a plan sheet, 24x36, showing how to make dead easy a dozen hard jobs in house and barn building. Thousands of Boys and Men are sending for this book—why not you? It is Vol. 36, Cypress Pocket Library, and is free to every subscriber of this paper.

WE WANT THIS COUPON

Clip and ship it to us; we will do the rest quickly and cheerfully. If you want the other Farm Books—Vol. 4, the Barn Book, Vol. 20, the Farm Needs Book, and Vol. 37, the Big Silo Book, ask and they're yours.

So. Cypress Mfrs' Ass'n.

are absolutely essential in destroying dodder, no matter what method is used: first, it must not be permitted to go to seed; second, immediate action must be taken as soon as it is found present so as to keep down the initial devastation as much as possible; and third whatever means is employed must be absolutely thorough, as a neglect of one or two living pieces of dodder stems may entirely spoil all results of one's labor.

The legumes are dependent upon the nodule-forming bacteria mentioned in a previous paragraph, the absence of these organisms in the soil spelling failure of the clover or alfalfa crop. Lime is very essential to the health and life of the soil bacteria, as it overcomes any acidity of the soil when it is applied in sufficient amounts, helps to destroy toxins or poisons that have developed, releases or unlocks the plant food in the soil and promotes a thrifty growth of the crops in general. Since acid soils can be improved so much by liming and alkaline soils of course do not need it, it is advisable to test the soil for acidity before seeding. A test for the acidity of a soil which is a quite accurate one, especially when used in connection with an observance of the kind and character of the growing vegetation, is that of the litmus paper test which consists of making a thin mud of some of the soil in question, using pure water, after which the litmus paper is placed on some of the mud and covered with it. After fifteen minutes or so remove the paper and wash it if necessary to show the color when if it has changed from blue to red the soil is acid. Most druggists keep litmus paper.

There are various forms of lime which may be used for agricultural purposes; their relative value for neutralizing the acid in the soil and their effect upon the physical properties of the soil as well as the price of each determining which should be used. Anyone preparing to use lime should acquaint himself with the different forms in which it may be purchased, their relative rapidity of action, and the ease with which certain forms are handled compared with others. The question is not a difficult one, but time spent in this study is sure to pay well in helping to select which form to use and how to apply it to the soil and possibly when.

Then last, but not least, there may be soils lacking in one or more of the elements of plant food aside from nitrogen. If not enough manure is available (liquid included) these elements can be supplied by means of those commercial fertilizers which supply potash and phosphorus. Two hundred pounds of bone meal or 250 pounds of acid phosphate and fifty to 100 pounds of muriate of potash as a suitable top dressing per acre may be used where it is known that the fields are low in these elements of plant food. On most clay-loam soils, however, potash is always quite plentiful.

DEHORNING CATTLE.

To the Editor of The Homestead:

Dehorning is not so cruel as some people think. While the animal suffers some pain during the operation it is only of short duration. Milk cows that have been dehorned have shown but very little if any shrinkage in quantity of milk and butter fat. This would show that the pain after dehorning is very insignificant. So the suffering is not to be compared to the beneficial results. There will be no more worry and pain and cruelty inflicted upon their mates by sharp horns. I have known vicious cows to disembowel a mate while together at the same rack or in the same stall. This can never happen when they are deprived of their horns. Then more cows can be kept together in the same corral. They will crowd close together like sheep without any harm to each other. There will never be any danger for the farmer as he goes among his cows or steers. He will feel perfectly safe.

Dehorning is not a difficult task if one prepares for it. The gentle animal may be dehorned by securing her head with a rope to a horizontal stanchion rail or stringer. The idea is to secure her head so she cannot throw it around and secure the rope around her neck and about her head so she will not choke herself. Then the horns can be quickly removed. Another method is to throw the animal and hold it stretched flat on the ground by a rope around its neck and one around its hind feet. The end of each rope being held by a man on horseback by attaching it to his saddle pommel. The assistant grasps the nose and upper horn, turning the head so that the lower horn can be removed first. But where there are a good many animals to be dehorned at one time the corral and a chute pen is almost indispensable. The cattle are put into the corral and one by one run into the long chute at the end of which is the squeezer where the animal's head is held securely while the operation of dehorning is performed. With this quite a number of animals can be dehorned in a day.

There are two instruments used for dehorning, the saw and the shears or clippers. I prefer the saw as there is no danger of crushing the horn as with the clippers. If horn is crushed broken pieces are liable to get into the opening which act as an irritant and sometimes cause inflammation and the formation of pus which may result seriously. The saw cuts clean and leaves the opening clear.

The horns should be severed about a half inch below where the skin joins the base of the horn. Always saw from the back toward the front of the horn. Cutting the horn too high sometimes results in a gnarly growth of the horn. This will give the animal an ugly appearance. In different breeds of cattle the point of union of skin and horn varies. The skillful eye comes to know where to cut.

After the horn is removed it is not positively necessary to apply any preparati n, as the loss of blood is not very great. If animals are dehorned in warm weather an application of pine tar will keep all flies away, and some operators claim it heals the wound rapidly. It is best, however, to remove horns in cold weather when there will be no danger of flies.

AGRICULTURAL CO-OPERATION FOR PROVIDING FARM LABOR.

(Continued from page 7.)

brought about in France under the authority of the Central Bureau of Labor.

Under the second proposition, the co-operative employment of labor, some beginnings, not consciously co-operative, have been made. Both in this country and abroad some more or less effective societies for the purchase and use of farm machinery are now in existence. From the co-operative purchase of a spraying apparatus or a clover huller it is but a step to the co-operative employment of the crew that handles the machine. Some rather difficult problems are likely to arise in connection with the joint purchase of farm implements, and in the United States the problem has usually been solved by allowing one man to purchase the machine which he operates for his neighbors or rents to them at a fixed price. This is likely to occur in the case of expensive machines. Threshing outfits, corn shredders, cottin gins, clover hullers, outfits for filling silos, digging ditches, sometimes for spraying orchards, cutting grain, steam plowing, sawing wood, and other operations with or without the full complement of operators, are becoming common throughout this country. Other things being equal, there is a decided gain in efficiency when the same crew handles a machine day after day. For this reason, and because laborers for a short period are frequently hard to procure, the machine owner usually furnishes all or most of the crew necessary. Where competition is keen enough to assure adequate service at reasonable rates there is little direct gain in co-operative ownership and use. But in a community where one or more specialized crops are grown, requiring the services of a considerable body of laborers for a short season, the co-operative employment of a gang or crew of hands to handle certain machines owned by individual members or to perform certain tasks is entirely feasible and would be decidedly advantageous.

In most sections the growing of sugar beets would be quite impossible were it not that the sugar companies furnish gangs of laborers who go from farm to farm to weed, thin, hoe, pull, top and pile the beets at a given price per acre. Accompanied by portable shanties or cabins on wheels, they carry their beds and board with them, they give the housewife no additional work, and the farmer is relieved of all the anxiety, and trouble incident to hiring a transient crew several times during the season to cultivate his crop.

What the sugar company is able to do for its growers a number of small onion or fruit or potato growers should be able to do co-operatively. The crew should be paid as a whole, by the piece or by the day, should be under the supervision of one man, follow an itinerary decided upon, by the co-operative association, and otherwise conform to rules mutually agreed upon. An arrangement of this sort would make possible the growing of small acreages of perishable money crops over a much wider area, with more economy and efficiency than under the present system, would give the laborers an incentive of a longer season of labor, the opportunity to increase their wages by greater industry and skill, and the assurance of comparatively steady employment during the period of contract.

A crew of potato harvesters, onion gatherers, or fruit pickers going from farm to farm, hired under contract by a co-operation of growers, is by no means visionary or Utopian. Crews of fruit handlers are in effect already in operation among the co-operative fruit societies of the West. To assure success it is essential that the product be specialized in a community and that the acreage be sufficient and not too widely scattered. Many problems of administration present themselves, but patience and intelligent management will, in due time, bring about the necessary adjustments.

As to companies of laborers—when the farm laborers of the United States become a little more class conscious, united and enterprising, we may look for organization of small co-operating groups, like the old-time sheep-shearing or cattle-driving crews, to perform special agricultural tasks. In a few parts of Europe these associations of laborers have found a place in the rural economy, and unorganized groups are found here and there in this country.

Economically they are justified by their superior efficiency. They know each other, and each knows and does the task for which he has special aptitude; they acquire skill, quickness and facility, and gain by organized, systematic effort. In practice, however, such groups can be developed more readily by a manager-employer. Hence at present the co-operating farmers previously described can more advantageously take the initiative in making up such crews.

Collective farming is a means of providing agricultural labor that has won little recognition except in a few European countries, notably Italy and Hungary. Even in these countries the purpose is to eliminate the middleman—the speculator who rents large tracts from the owners and sublets them in small parcels at greatly increased prices to the peasants. Especially in Italy, however, the outcome socially, politically and agriculturally has been striking. Class consciousness, political solidarity, and intelligent, purposeful, prosperous agriculture has resulted. The collective farming organization has been the nucleus whence sprang many varieties of co-operative effort, including co-operative purchase of machines and hiring of laborers.

Mostly, each man operates his individual field, but on operations requiring a number of men several farmers join forces and work together, going from farm to farm. This scarcely differs from the custom of "changing work" in haying, stacking, threshing, etc., still common in parts of the United States.

The collective form, or co-operative small-holding society, has little to commend it to our farmers, although it is gaining a foothold in England. But the principle of j ning labor forces under a well-considered plan, to perform operations that several men can accomplish more efficiently than one or two, or that would otherwise necessitate the employment of transient day labor, is altogether sound in theory and worthy a practical trial.

Of these four propositions, the co-operative farm-labor bureau and the co-operative employment of labor crews for the year or season present themselves as the most immediately practicable and feasible. They at least merit discussion and thoughtful consideration, and I believe adoption and trial.—[A. L. Cance, of Massachusetts, in address before Farmers' Institute Workers.

"PITTSBURGH PERFECT" FENCE

Open Hearth Steel Wire — Pure Zinc Galvanizing

Welded by Electricity

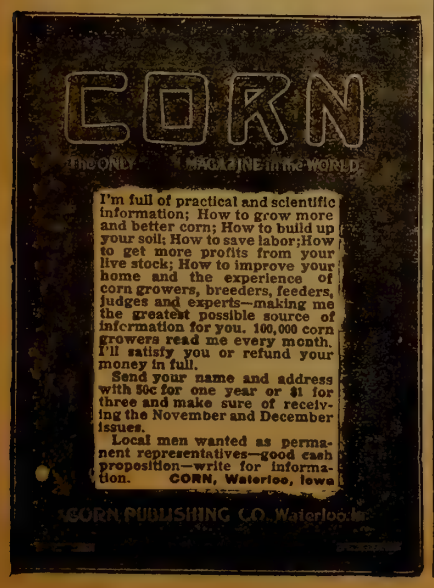
These are the reasons why "Pittsburgh Perfect" Fence saves your money. The wire, the galvanizing, the method of construction, make "Pittsburgh Perfect" the strongest, best looking, most lasting, effective and satisfactory line of fencing produced anywhere. It is the easiest to string, because it is a one-piece fence, the electric weld joining the wires permanently at every contact point. Hogs can't spread the stays, nor can they lift the fabric, and stock can't break it down for all strains and shocks are resisted by its whole surface.

The great popularity of "Pittsburgh Perfect" Fence surely prompts you to thoroughly investigate it. We want you to; so write today for our latest catalogue (sent free), which tells how to test wire for yourself, and shows the many "Pittsburgh Perfect" Fences for every FIELD, FARM, RANCH, LAWN, CHICKEN, POULTRY and RABBIT YARD and GARDEN.

Sold by Leading Dealers Everywhere

PITTSBURGH STEEL CO.
PITTSBURGH, PA.

Makers of "Pittsburgh Perfect" Brands of Barbed Wire; Bright, Annealed and Galvanized Wire; Hard Spring Coil Wire; Twisted Cable Wire; Galvanized Telephone Wire; Bale Ties; Fence Staples; Poultry Netting Staples; Regular Wire Nails, Galvanized Wire Nails; Large Head Roofing Nails; "Pittsburgh Perfect" Fencing.



ECHOES FROM A KANSAS FARM.

It still feels like winter, although barely November. We have had two regular snow storms and several freezes, with a low temperature the last days of October that broke all records for such an early date.

A man who has already fed considerable of it says that silage made from this year's corn crop should be fed at the rate of sixty pounds a day when forty pounds of the ordinary silage was used. This means that it takes sixty pounds to do the work of forty pounds such as ordinary corn produces.

It is an absolute certainty that corn fodder will feed out no better than the silage, so those who have counted their shocks and figure the usual number for wintering a certain number of cattle are going to get left. The feed question, with only a little winter to scare us, already looks mighty big.

The petty thief is one of the most despicable beings to have in a neighborhood. A neighbor reports that he loses many things when all the folks are away, and of course they go where folks live who can see when no one is at home. He plans on making a sneak back home one of these times, after all are seen to go away, in the hope of catching the thief in the act.

Here in Kansas it is a penitentiary offense to steal chickens. This has done much to stop chicken stealing, a very common form of petty stealing a few years ago. Prosecutors are a bit too timid about enforcing this law, however, as two or three chicken thieves have been caught in this section of the country and then paroled. The way to make people respect the law is to enforce it to the limit.

We heard a man argue, the other day, that he could now rent a farm cheaper than he could own one. He figured money at 6 per cent and declared that he could rent many farms for a cash rent much less than 6 per cent of their selling value. Take, for instance, the farm selling for $50 an acre, he said he could rent it for less than $3 an acre.

All the same, with the money in hand to make a nice payment on a farm, if we were a renter we would quit being one and become a landowner. There is no peace of mind like that which can be experienced by the man who owns his home. A renter knows not what year he may have to move. At the most, the term of a lease is short, and the renter who is found occupying the same farm for ten years is rare.

Four years ago the first of this November we bought the auto we now have, the first and only auto we have owned. It still gives excellent service and bids fair to outwear many of the newer machines. Of course it lacks foredoors, self starter, electric lights and many of the more recent improvements, but it goes and comes as we want it, many times when the roads are so muddy the finely finished cars are not taken out for fear of marring the finish.

We do not believe in owning anything too nice to use except under the most favorable conditions. Life is too short and things become old too quick for this, even when not used. Of course this does not mean that a person should take no care of what he has, but it does mean that a person should not put things away only to take them out on rare occasions, when all conditions are exactly favorable. We have known of folks who would ride half the time in a lumber wagon rather than take the buggy out for fear of spattering it with mud.

Since this country was settled there has been a gradual increase in the value of land. There is no reason to believe that the increase in value has yet stopped. Men may argue that the height has been reached, but men have been arguing that ever since land sold for $10 an acre. When $25 an acre was reached here many folks said that was high enough—that folks were fools to pay more—but since that time there have been plenty of fools. Land is to be much higher yet, and the man who buys at present prices will realize a nice increase before he is tired of waiting for it.

The cold weather has done one thing, which is to bring folks to a realization of the amount of feed that will be required to carry stock through the winter, particularly of such feed as we have this year. Pastures now have gone, and the feeding season is directly before us.

The forests of Norway are mostly in private or municipal ownership, the nation owning 28.5 per cent of the total forest area. The national forests of the United States occupy only about 20 per cent of the total forest area of the country.

Ask your neighbor to subscribe for The Homestead.

DOGS.

Special Collie Sale

WE have about twenty extra select Collies, all best of breeding and beautiful markings. They are from natural workers, and easily trained. We have a fine line of puppies, and will make special attractive prices on two or more. Write us at once.
A. A. MARTIN & SON, TEKAMAH, NEB.

ORPINGTONS.

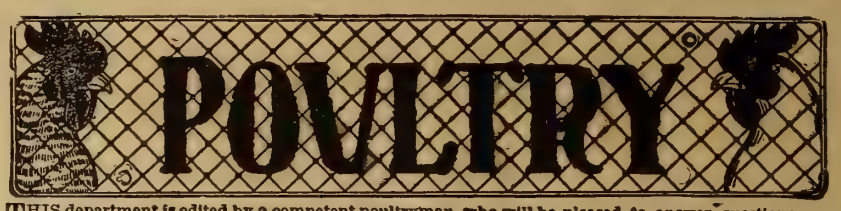
SINGLE Comb White Orpington Hens and Pullets at attractive prices. Choice cockerels at $1 up. Mrs. Howard Niswander, Kinross, Iowa.

241 EGG strain. S.C. Buff Orp. World's champion layers. 100 choice early hatched ckls. Prices right. Circular free. W. L. Bardsley, Neola, Iowa.

75 S. C. B. Orpington hens $1 each. 100 ckls. $1.50 to $5 each. Good size and color. Mammoth Pekin ducks $1. Mrs. W. E. Zimmerman, R. 5, Neola, Ia.

SINGLE BUFF ORPINGTON COCKERELS for sale at $1 each if taken before January 1, 1914.
M. W. Benington, R. 2, Box 62, Chariton, Ia.

Mention The Homestead when writing.



THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

GROWING SQUABS FOR MARKET.

For the most part, growing pigeons is regarded as a hobby. Almost all classes of people are interested in these beautiful pets. Even in the heart of a great city there will occasionally be found small flocks of these beautiful little creatures that, unafraid, will alight at the very feet of the hurrying pedestrians.

Then, there is another branch of pigeon breeding that is far removed from all sentiment. It is that of raising squabs, or young pigeons, for the cold cash they will bring. Squabs are considered by epicures to be the most delicious of all poultry products. The demand for them is steadily increasing, and the price is rising in common with that of other poultry products. So great has been the demand, that some poultry raisers produce what they term "squab broilers," which is not a pigeon at all, but a chicken that has been crowded from the shell to weigh one pound in the shortest possible time.

Squab raising possesses certain very definite advantages as compared with other branches of poultry keeping. It may be conducted as an exclusive business, combined with other lines of poultry keeping, or operated as a side line to furnish the home table.

In this, as in every industry, the start should be made on a small scale and the business developed as experience is gained, and the results warrant. Such a plan involves only a small initial investment, and a very small loss if the operator decides, after all, that he is not taking it seriously.

There are many advantages in this line of work. Only a small area of land is required, as the breeders are never allowed their liberty, but are kept confined in the house and adjoining flight, or exercising pen. A good-sized plant may be successful on a town lot. All the work of hatching, brooding and feeding is performed by the parent birds. This cuts out the hardest and most trying part of the whole poultry business. Vigorous pigeons make good breeders until six or seven years old, and this does away with the necessity of renewing the breeding stock every year, something that is of much importance.

Then there is the other side of the question, which is fully of as much importance. It must not be thought that squab raising has no disadvantages, because, in common with everything of any import, there is always the "other side." It is a business of endless detail and requires very special knowledge and experience on the part of the operator. Poor breeders may reduce the profits, disease may deplete the flock, and a pigeon plant will get overrun with insects in an incredibly short time. The plant must be large enough to supply a sufficient number of squabs to insure a good-sized shipment each week. The squabs must be dressed when they reach the proper size. They can neither be held until enough has accumulated to make an economical shipment, nor held until the market improves. This is the most perplexing problem a squab grower has to contend with.

Not more than fifty pairs should be kept in one flock, and a room ten feet square and eight feet high will accommodate this number. An enclosed flight, in addition, is absolutely necessary. The floor of the flight room should be kept sanded, renewing often. Nest boxes, two for each pair, may be constructed similar to pigeon holes in a desk; these should be 6 foot square. In these compartments place nest bowls, which can be purchased from a supply house. There must be water for drinking purposes, and water for them to bathe in.

This ration has been tested and found good: 45 per cent cracked corn, 45 per cent red wheat, 10 per cent Canada peas. Hemp and buckwheat in small quantities at intervals. During the winter increase the corn; give more wheat in hot weather. A conservative estimate of profits is from one to three dollars for each pair. It is possible to realize double this amount, depending on the person back of it.

BROKEN-DOWN FOWLS, PROPER RATION, SEPARATING BREEDS

"Wm. C. R.," Iowa, is experiencing "all kinds" of trouble with his fowls. In a recent communication he says:

After my chickens were about six weeks old, one became afflicted as follows: It would eat and drink as the rest, but its back seemed to be broken, at least it would drag in the back. Just recently another pullet, about three months old, became affected the same way. Both of these pullets were killed and examined. I would like to know if the trouble was caused through injury, or is it a disease, and if it is contagious. Also, what to do as a preventative, and if there is a cure.

What do you think of the following ration for chickens: Barley in the morning, wheat at noon, and middlings soaked all day and made very thin for the evening. The chickens have a big run, and plenty of grass.

In the first instance, it is not a case of disease, simply a "breaking down." There are two general forms of the trouble, the most common being that when the abdomen has become so distended and enlarged that it drags upon the ground. This is more common in old fowls that are inclined to take on fat. In the other form, the back part of the body is depressed, while the front part is elevated, and the legs spread apart. Our correspondent's fowls are afflicted with the latter form.

In this form it is often temporary, though a fowl that recovers is unfit to use for a breeder. The cause is due, either to constitutional tendencies, or wrong feed, or both. Chicks that have been raised in confinement and fed an excessive proportion of soft foods, with an absence of lean meat, cut bone and green stuff, grow an abnormally large bone that is soft and spongy. With this kind of a frame, a pullet is subject to "breaking down." The trouble is aggravated by the attentions of a male.

Ordinarily, such a hen is fit for food. Prevention is the only remedy worth while; begin now, to prevent trouble next season by excluding all afflicted hens from the breeding pens. Avoid breeding from birds that have large, loosely-knit frames and lacking in a strong well-proportioned build. In other words, size up your flock, and mercilessly cull out all that, in your judgment, do not have strength enough for their size.

Wheat, barley and oats do not vary largely in composition, and any one is good, or all, for that matter. If the middlings were fed dry in a hopper, with equal parts bran and one part beef meal to ten parts of the whole, they would be all right too. Being soaked thin is, in a measure, responsible for the condition of this flock. Fowls need hard grain to keep the digestive organs in a healthy condition. This is a very simple ration, and, at the same time, would probably suit the case of our correspondent. On the farm where it was fed, the flock averaged better than 150 eggs per year. It is well to remember, that a good egg ration is a good growing ration.

Ground oats, four parts by weight; bran, four parts by weight; cornmeal, two parts by weight; beefmeal, one part by weight. The above mash should be fed dry, and the fowls may have access to the hopper in the afternoon only. As a grain ration, feed the following: corn, two parts; wheat, one part; oats, two parts. The grain ration to be fed in deep litter, so that there will be an incentive for the fowls to keep busy. If the barley is to be used it would better be crushed and added to the mash, two parts of the whole. These rations should, of course, be supplemented with green feed. The grassy lot mentioned will supply succulent food so long as the weather is favorable.

In reply to the last question, it largely depends on how long the hen has been laying since the last fertilization. Any time from two days to two weeks. In most cases, ten days would be long enough. However, promiscuous mating is to be discouraged. Many non-fertile eggs could be traced to permitting a hen to choose her mate, and then changing her to another pen.

THE SECRET OF WINTER EGGS.

To the Editor of The Homestead:

We are often confronted with persons who seriously believe that success in the poultry business is obtained through the medium of "secrets." These individuals are either ignorant, superstitious or wholly without knowledge of poultry.

The old heathen idea of success was that if you could not comprehend or understand how your neighbor made a success, he was guilty of leaguing himself with the devil to accomplish his purpose. Fortunately, we are getting away from that sort of reasoning. We are working from the complex to the simple. We know that a man achieves a result, not by some supernatural influence he brings to bear, but by the fact that he has solved the problems confronting him.

So it is with matters pertaining to poultry. We have learned to eliminate the complex things and introduce the simple. We treat our poultry as a machine, and with proper care any machine will produce satisfactory results.

The matter of winter eggs is one that causes considerable comment, and one that is not often satisfactorily solved. We find dozens of advertisements claiming to hold the "secret"

to winter egg production, but as a matter of fact there is no secret to the production of eggs in winter.

If you will eliminate the element of superstition and will treat your hens just as you treat your dairy cows, for instance, you will stand a better opportunity of filling the egg basket when the prices are good.

We have learned that nature has laid down laws governing the action of poultry. Those laws are very simple and if we but keep them in mind we are in a fair way to succeed.

In the original or wild state a fowl was not expected to lay eggs except in the early months of the spring season. The act of producing eggs is the generation of species and this naturally came at the most favorable season of the year. But why is the spring the most favorable season?

One reason is that the weather is mild at that time. Another is that the awakening of nature stirs the blood and naturally calls forth the young life. But the most important, by far, is that the spring season finds more varieties of life, which the young fowls may feed upon, than any other season.

Scientists, by long experimentation, arrived at the conclusion that this abundance and variety of food stuff must have something to do with the production of eggs. They found that a combination of the three prime elements of food stuff—vegetable, animal and mineral—produced a balanced ration, which not only cared for the demands made by the body of the fowl, but also allowed a surplus for the production of eggs.

Then by the processes of scientific breeding we have produced a race of poultry that lay at any season of the year, if handled intelligently.

In view of this fact, it would seem that the winter egg question is not as complicated as may have been imagined at first. There are just two things to be considered in the production of winter eggs; first, the bodily wants of the hens, and, second, the ration supplied.

The demands of the individual hens and how to answer them is a question that cannot be solved by any definite rule. It is a question which will depend upon the judgment of the attendant. Different flocks will require different treatment. This is just as true in the case of poultry as in the case of the dairy herd. Dairymen will tell you that a cow will not produce milk until every need of her body has been supplied. This is also the case with a hen. As mentioned before, the production of eggs is the generation of species and that is never performed in any life until the individual is in the fittest physical condition. So keep your hens in good health. Keep them busy and keep up their appetites. A hen that is always on the go, always looking for another morsel, is the sort of hen that will be found laying eggs.

The ration is probably the secret, if there be any, of winter egg production. If you have a healthy hen and give her the proper care and ration, you cannot fail to get eggs when the prices are high. The writer has tried this many different times and under many different conditions and it always worked out to the same result. In this respect poultrymen look upon the hen as a machine. Feed the machine the proper materials, keep it in good condition, and you will be quite certain to obtain the finished product. In making up our winter rations, we have always endeavored to keep in mind the elements of food the hens would obtain when in the wild state. If we are to persuade hens to change their season of laying from the spring to early winter months, we must also change the environment and ration so that it will correspond, as much as possible, with the environment and ration of the spring months. In other words, we must make them comfortable and supply them a balanced ration.

In the matter of animal food, we cannot supply them with bugs and worms, but we have many substitutes that answer the purpose just as well. Any of the commercial beef scraps on the market will do very well.

In regard to green food, it may be supplied in the form of sprouted oats, steamed alfalfa, steamed clover, vegetable tops or chopped vegetables. Any method that is convenient to the attendant will be sufficient. We prefer steamed alfalfa, as it seems to produce better results at a more economical figure than any of the other forms of green food.

Mineral matter is supplied in the form of grit, oyster shell or gravel. It is a very important element and too often is overlooked.

Grains are one form of vegetable matter and are essential in the ration. Corn, wheat and oats are the principal standbys, but other grains are often fed with good results.

In the morning, we feed our hens steamed alfalfa mixed with wheat bran, at the proportion of one quart to 100 hens. We do not aim to satisfy their hunger, as we wish to keep them working in the straw litter until noon.

At that time we feed whole oats in the proportion of two quarts per 100 hens. This is fed in hoppers so the hens may have easy access to it. By two o'clock the majority of the hens have laid, and at that time we feed a small block of sprouted oats or vegetable tops.

At four o'clock in the afternoon, we feed generously of a ration of three parts cracked corn to two parts wheat. This is scattered in the litter and keeps the hens busy until dark.

When the final rounds are made in the evening, we scatter wheat in the litter, at the proportion of one quart per 100 hens, for the hens to work on as soon as it is light enough for them to see in the mornings. In this way they receive their principal morning feed long before the attendant is up.

The hens are kept generously supplied with water, which is boiling when placed in the fountains. This is done to keep it from freezing as long as possible. As an egg is over 80 per cent water, the hens must have an abundance if they are to produce many eggs.

Keep the hens happy. A very important thing that should always be remembered is to allow them plenty of fresh air. Many people fail on account of this oversight. Fresh air never hurt any fowl. It is the manner in which it is supplied that often causes trouble. The open-front house is the best type of house for the winter layer.

Care, comfort and proper rations are the only "secrets" found in securing winter eggs. Conduct the henyard as a business and you will find that poultry success is 99 per cent hard work and 1 per cent luck or the "secret" element. C. Sherlock.

POULTRY BREEDERS TO EXHIBIT FOWLS.

Poultry breeders from all parts of the state will be present with exhibits of choice fowls at the tenth annual convention and show of the Wisconsin Poultry Association, to be held in the livestock pavilion at the college of agriculture of the University of Wisconsin, Madison, from January 5th to 10th, 1914. Much interest is being manifested in poultry raising in Wisconsin, and the nearness of the principal meat and egg market in the middle West makes the industry especially profitable when given proper study.

The association is fortunate in having as its secretary James G. Halpin, head of the poultry department of the college of agriculture, to which position he came five years ago after having held positions with the Rhode Island and Michigan state agricultural colleges. Mr. Halpin, who is a graduate of Cornell and a native of New York state, is conceded to be one of the foremost poultry authorities in the country, and under his direction the Wisconsin association is becoming one of the strongest in the middle West. —[Wisconsin Farmer.

It is predicted that the time will come when beefsteak will cost a dollar a pound. Here's hoping it won't do any such thing. However, it's "an ill wind that blows nobody good." With the prices of other meat stuff soaring out of sight the prices of poultry and eggs comparatively, will advance, too. Never has the outlook for the poultry business been brighter. This, in the face of the fact that since the poultry industry assumed greater proportions, the cry has been sounded all along the line that the industry would soon become overdone. As a matter of fact, the increase of the demand far exceeds the increase of production.

POINTERS

—J. E. Lewis, Brayton, Iowa, advertises Indian Runner ducks on this page.

—Read the advertisement of Woodlawn Farm, Sterling, Ill., offering Rhode Island Reds for this sale that appears on this page.

—Rose Comb Brown Leghorn cockerels are offered for sale by Mrs. Roy Landis, Weldon, Iowa, in her advertisement that appears on this page.

—On page 16 of The Homestead appears the advertisement of A. D. Murphy, Essex, Iowa, offering 765 Barred Plymouth Rocks for sale.

—Mrs. James Pedley, Britt, Iowa, is quoting bargain prices on White Plymouth Rock cockerels and hens if taken at once. Her advertisement appears on page 16.

—Silver Laced Wyandotte cockerels, Rouen ducks and Fawn and White Indian Runner ducks are advertised for sale by Mrs. H. J. Miner, Wayne, Neb., in her advertisement appearing on page 16.

—For the next thirty days W. H. Patton, Iowa City, Iowa, will quote bargain prices on Rose Comb Rhode Island Red cockerels. His advertisement in which he states that he will guarantee satisfaction, appears on this page.

—F. E. Ristrim, Stanhope, Iowa, is offering White Plymouth Rocks for sale in his advertisement on page 16 of The Homestead. He writes: "My customers will receive larger and better quality birds this year than I have ever been able to offer."

—R. B. Lowe, Indianola, Iowa, has 100 Buff Wyandotte cockerels and pullets which he will offer for sale at prices within the reach of all. Write him what you want and he will describe what he has. By ordering early you can get the pick of his flock. His advertisement appears on page 16.

—In sending copy for advertisement appearing on this page Bert A. Randell, Mt. Zion, writes: "We have 500 birds to select from and as fine a flock as we have ever had. We have lots of cockerels and pullets up to standard weight and good all the way through. Are making special prices to move these birds before cold weather."

—Mrs. N. W. Burbank, New Sharon, Iowa, in furnishing copy for her advertisement appearing on page 16, writes: "I have two fine flocks of Bourbon Red turkeys that are not related. Also have a fine lot of White Wyandottes for sale cheap, considering the quality, and a few pair of Mammoth Pekin ducks. I guarantee satisfaction to my customers."

—If in the market for Single Comb White Leghorn yearling hens or choice cockerels the advertisement of the Eggland Farm, Mt. Vernon, Iowa, that appears on this page, will be of interest. The Eggland Farm in sending this advertisement write: "Last season we advertised in several of the best papers in the United States, and our cash sales from The Homestead amounted to more than all the other papers put together. This year we are using The Homestead only, as it will sell our entire output."

—Mrs. Geo. Manning, Birmingham, Iowa, whose advertisement offering Single Comb Rhode Island Reds of both sexes and Single Comb Brown Leghorn cockerels for sale appears on this page, in furnishing copy she writes: "I have been a reader for seven years taking great pains in improving my stock each year. At present I have flocks that are producing prize winners to compete with the largest breeders. Satisfaction has been my aim and from the letters I have received from customers I have succeeded."

—The advertisement of L. G. Johnson, Steamboat Rock, Iowa, offering Single Comb Rhode Island Red cockerels for sale, appears on this page. In furnishing copy, Mr. Johnson writes: "Have raised Reds for six years, both from fancy and utility standpoints. Have made some splendid winnings in Iowa's leading shows. This fall I have an exceptional fine lot of farm raised birds to offer that are splendid in type, and can supply the farmer who wants some good husky birds to head his flock or can supply some fine breeders or exhibition birds at reasonable prices."

DUCKS.

White Pekin Ducks and Drakes

DRAKE and hen took first prize at the Oswego, Kansas, poultry show in November, 1912. Score 97-97¼. Write your wants.
JOHN M. HALL - WILLIAMS, IA.

50 ROUEN DUCKS

$3 PER pair, $4 per trio, for next thirty days, 1913 hatch. 1st and 2d drake, 1st and 2d duck Iowa State Fair, 1913. Silver Campine cockerels from best imported stock, $1.50 each. Address
C. & C. T. VAN LINT - PELLA, IOWA

INDIAN RUNNER DUCKS—Winners at Chicago. Choice stock at farmers' prices. Fawn and white. F. L. Reinhard & Son, Ottumwa, Iowa.

FAWN AND WHITE Indian Runner ducks and drakes, $1.00 each; $10.00 per dozen while they last. Write Mrs. Howard Niswander, Kinross, Iowa.

F and W. Indian Runner ducks and **drakes** from great laying strains. Prices reasonable. Write me. Address **J. E. Lewis, Brayton, Iowa**

For Sale **Rouen Ducks.** Also **Forest Trees** at $3.00 per thousand. Write me. Address **JAMES CASSELL, FREMONT, NEB.**

LEGHORNS.

ROSE COMB BROWN LEGHORN COCKERELS

At the Pike Timber Stock Farm
DAVENPORT & MACK, BELMOND, IOWA

BIG BARGAINS in R. C. Brown Leghorn hens and cockerels, also in Fawn and White I. R. ducks and drakes scored and unscored. Also a few White I. R. drakes of the Fischel strain. Write your wants. Mrs. G. W. Brockway, Clarksville, Iowa.

SINGLE COMB BROWN LEGHORN COCKERELS $1 each while they last. Address E. A. Bergsten, Sperry, Iowa.

SINGLE Comb White Leghorns, 250 ckls. at bargain prices, guaranteed to please. $1 and up. Circular and show record free. W. F. Wallace, Diagonal, Ia.

1,000 S. C. B. Leghorn hens, pullets and cockerels, $8.00 to $12.00 per doz. Heavy laying strain. Edw. Dooley Selma, Ia.

S. C. W. Leghorns, Young's strain, unscored cockerels, $1; scored, $2.50 and up; pullets, $1 each. Address Mrs. Wilson McIntyre, Red Oak, Iowa.

LEGHORNS—Rose and Single Comb, Buff, White and Brown, $1.00 each. Doz. $10.00. Progressive Poultry Farm, Hampton, Iowa.

FOR SALE—CHOICE LOT OF S. C. WHITE LEGHORN cockerels, 6 for $5. Mrs. S. J. Philson, Harlan, Ia.

FOR SALE Fine pure bred R. C. Brown Leghorn cockerels, $1 each; $10 per dozen. Mrs. Roy Landis, Weldon, Iowa.

100 S.C.W. Leghorn yearling hens, finest breeding, at $1 each or $10 doz. 100 choice cockerels at $1 each. Eggland Farm, Mt. Vernon, Iowa.

RHODE ISLAND REDS.

ROSE COMB RHODE ISLAND REDS, EXCLUSIVELY

Add Value to Your Flock

BY purchasing an April-hatch, range-bred cockerel. Prize winning, large-boned, deep-red birds with long backs. Prolific laying strain. No better blood anywhere. Stock and eggs shipped on approval. As to my reliability write any bank or business firm in Iowa City.
HENRY G. WALKER, IOWA CITY, IOWA

S. C. Rhode Island Red Cockerels HIGH-CLASS, farm raised, dark velvety red, heavy-boned fellows that will improve your flock. $1.50 and up. Mention The Homestead.
L. G. Johnson, Box H, Steamboat Rock, Ia.

Single Comb Rhode Island Red Cockerels for sale at $1.00 and $1.50 each; also White Holland toms of good size and pure white at $3.50 each during November. Jesse D. Howarth, Route 2, West Grove, Iowa.

BIG-BONED, deep red, Rose Comb Reds, red eyes, long back, low tail, high scoring, $5 each, good breeders, three for $5, cockerels, pullets, guaranteed. Address Highland Farm, Hedrick, Iowa.

CHOICE Pure-bred Reds (either comb) yearling hens, ckls., pullets, price $1 each. Indian Runner ducks $1.50. Mrs. Laun, Riverdale Farm, Floyd, Ia.

S.C.R.I. Red Cockerels from $1, $1.50 and up; Fawn Indian R. drakes, $1. Address Mrs. Sophia Rader, Laurel, Ia.

FOR SALE—R. C. R. I. Red hens, Pullets $1.50 each, $15.00 per doz. Cockerels $2.00 each, $18.00 per doz. Mrs. Charles Belz, Conrad, Iowa.

MARCH and April hatched S. C. Rhode Island Red Cockerels, extra good color. Prices right. Mrs. Frances Strong, Oakland, Iowa.

NINE years breeder R. C. Reds. Cockerels at bargains next 30 days, Tompkins strain, none better. Satitfaction guar. W. H. Patton, Iowa City, Ia.

SINGLE Comb Rhode Island Reds, both sexes; Single Comb Brown Leghorns, cockerels from choice stock. Mrs. Geo. Manning, Birmingham, Ia.

FOR SALE—Rhode Island Reds, both combs. Pullets $1.25 each; yearling hens $1.00 apiece. Address Woodlawn Farm, Sterling, Illinois.

BRAHMAS.

PURE BRED LIGHT BRAHMA COCKERELS for sale at $1.00 each. They are good ones. Mrs. J. M. Dries. Ashton, Ia.

MY HEAVY WEIGHT, Light Brahmas won 14 premiums at the Iowa State Fair. Frank Johnson, Monroe, Iowa.

LIGHT BRAHMA cockerels and pullets, 1st pen $1.50; 2d pen $1; fancy stock. Address
GEO. C. SCHOEFER, HAMPTON, IOWA.

LANGSHANS.

BLANGSHANS, Runner ducks; cockerels, hens and pullets, $1 to $3. Satisfaction guaranteed. Circular free. Bert A. Randell, Mt. Zion, Iowa.

ANCONAS.

S. C. MOTTLED ANCONAS. To make room for winter I offer 50 pens and trios at bargain prices. Address Geo. W. Harris, Route 3, Shelby, Ohio.

MISCELLANEOUS.

Smith's Big Removal Sale

AS I am going to move to Minnesota December 1, will sell my entire flock of Bronze turkeys, and S. L. Wyandottes, at big reduction if taken at once. These are all high-class, well-marked birds.
J. D. SMITH - - MONTEZUMA, IOWA

52 VARIETIES of chickens, ducks geese and turkeys. Birds score 90 to 96¾ by Todd. Thousands of blue ribbons and first sweepstake prize two years in succession. Largest poultry farm in northern Iowa. 4-ct stamp for catalog.
E. & J. W. Trettin, Grafton, Iowa

PRIVATE scoring done at reasonable rates. 30 years' experience. Also breed Partridge Rocks, R. C. White Leghorns and Rhode Island Reds. Stock for sale. L. G. Housholder, Bonaparte, Ia.

BARGAINS in all varieties Wyandottes, Orpingtons, Minorcas, Reds, Rocks, ducks, geese, turkeys. Progressive Poultry Farm, Bx. 10, Hampton, Ia.

MILK HOUSE CONVENIENCES.

"Our new milk house is the pride of our farm. Come, let me show it to you," said an enthusiastic farmer recently. Truly his milk house is one to be proud of and one to inspire in any man who might see it a desire for one of the same kind on his own farm.

The location had many things to commend it. First, it is near the farm house. That makes it convenient for the ladies. Women have done, women are doing, and women will continue to do the greater part of the milk house work on our farms. For the milk house to be near the home saves steps. Another very big advantage was worked out on the particular farm mentioned. Hot water was piped from the kitchen range by short underground pipes to the milk house and furnished hot water for the separator and for cleansing all the dairy utensils.

That particular milk house had a gasoline engine also. Needless to say the farm separator was hitched to that engine and saved time and labor for the farm boys. Another feature, and not one so commonly seen, was a churn run by the same gas power. Quite a large amount of butter was made on the farm and to have the churn operated by mechanical power is an important factor in economical management.

The building had, of course, a cement floor and plastered walls. The cement floor provided for easy cleaning and made possible thorough sanitation. The same was true of the walls.

Two things might be added to that milk house that would increase its convenience and serviceability. One would be a built-in tank to hold the cans of milk and cream. This could have been very easily constructed at the time the floor was laid and would doubtless have proven a source of convenience for it would not have become leaky and would have been clean and serviceable at all times. The other article of equipment that might have well been added is a washing sink. With hot and cold water, with power, with a churn equipped with attachments for working the butter, a real dairy washing sink would have made the little building a first-class farm milk house indeed.

PLAN FOR FALL CALVING.

A great many farmers and dairymen have just passed through a period of very strenuous field activities and of heavy milking with the dairy herd. Now, when field work is very lax comes a period of light milking in the barn. In fact on some farms the term idleness might well be used. A far more even balance in the year's work can be brought about if the cows are bred to calve in the fall. The logic of this is very plain to most men. As the work of caring for the crops draws to a close, the busy time in the barn begins. The cows will be coming fresh at that time. There will be plenty of time for giving them any needed attention, and for looking after the young calves.

We are fond of referring to the financial side of all dairy propositions. Records have shown that under the system of having cows calve in the fall 15 or 20 per cent more milk is secured during the year. Then invariably the price received during the winter is higher. Taken altogether the great yield and higher price makes an inducement in dollars that is convincing to any man.

Milk and milk products are more easily cared for during winter, as less artificial refrigeration is needed.

Winter dairying helps to solve the hired-man problem. It makes the working hours of summer shorter and more regular. It provides steady work during the winter, thus keeping some of the good men from drifting to the cities.

Now is the time to plan definitely for winter dairying to begin in the fall of 1914. The cows must be bred for calving in fall or early winter. Several noticeable purchases of bulls have been made recently for use in adopting the system of winter dairying. Winter dairying will result in greater profit to the farmers.

THE BULL AND BETTER DAIRYMEN.

To the Editor of The Homestead:

It has been my good fortune to have assisted quite a number of men who milk grade herds to purchase pure-bred dairy bulls. One fact which I have noted, and which has been but little commented upon, is that as soon as a man has secured a pure-bred sire he becomes a better dairyman. The first bull I ever purchased for a farmer made a striking change in the dairy business as it was conducted by that man. When I first visited his farm he was rather indifferent, but yielded to persuasion, and instructed me to buy a bull for him. Fortunately at a point not far distant I located a very desirable youngster, with an excellent kind of a sire and the right kind of a deep-bodied, persistent dam. The price was reasonable and the youngster was shipped to his new owner. When I visited the farm two months later the contrast was very striking. A new tester complete had been purchased and the production of the cows recorded carefully. There was more regularity in feeding and milking. Above all and back of all there was a very keen interest manifested on the part of the owner and his sons. With cheap foods and a good market dairying would be profitable. For them to own a real classy pure-bred dairy bull made an immense improvement in their dairy operations.

In the same locality I inquired for other dairymen. One particular man was named with the comment, "He bought a good bull two or three years ago; now he is becoming a first-rate dairyman." That statement told a big story as a visit to the farm verified. The bull referred to was a magnificent specimen, the best of his breed that I ever saw in the entire state. There was a bunch of mighty good heifers by him in the pasture. The owner really was becoming a dairyman. He said, "I have received a blue-print plan from the U. S. Dairy Division for a barn. I have ordered a testing outfit which I am expecting every day and it is my intention to keep careful records of all my cows." In this case no doubt the bull was always a source of inspiration to this man, helping him in his decision to improve his herd and his farm. Further than that the bull led him to see the possibility of grading up his herd and the increased profit and satisfaction resulting therefrom.

Pure-bred herds are now common. As a result prices on bulls of sufficient individual merit and excellency of breeding to improve the common herds are probably lower than ever before. Every man who desires to grade up his herd may well begin at once to do so. From the standpoint of grading up, a high-class sire is more than half the herd. The grades are practically stationary in their total production. A herd with an average production of 200 pounds of butter fat per year may be taken as zero with regard to production. To place with such a herd a sire whose ancestry is 500 gives to that herd possibility of great improvement and makes a high-class bull far more than half the herd. It is good busines and good sense to use the best sire possible.

H. E. McCartney.

A CHEAP ICE HOUSE.

To the Editor of The Homestead:

If properly constructed a cheap house for storing ice will be found as effective as a more costly one. A very efficient ice house may be built with the following material: In building an ice house twenty feet long, sixteen feet wide and ten feet high it will require 342 feet of 2x6 studding; twelve 2x4 rafters twelve feet long; 576 feet matched boards; 720 feet boards for lining; 480 feet roofing boards; 3,000 shingles or 480 feet prepared roofing; one batten door; hinges and nails; twenty-five wagon loads of sawdust or other non-conducting material.

There are some general principles which should be observed in the construction and use of any kind of ice houses. First, there must be perfect drainage with no admission of air beneath. Proper ventilation and dryness above are absolutely necessary with sufficient packing material above, below and around the ice by which the necessary temperature may be obtained to preserve the ice and prevent wasting. Sawdust is one of the best materials to use for packing, but if it is not to be had, cut straw, oats or wheat chaff may be substituted.

The soil upon which to build an ice house should be of a dry, sandy or gravelly nature and the foundation should be dug two feet deep. If the soil is of clay the pit should be dug two feet deeper and filled with sand or gravel. If great care is not taken in building the foundation to prevent the entrance of air there will be a great loss of ice after the weather becomes warm. Sills of 2x6 inch plank are laid across this foundation and upon these are nailed studs of the same size ten feet in length, placed four feet apart around which are nailed horizontally the matched lumber. For convenience in filling a door frame may be built at each end. Plates of 2x6 inch timber are spiked onto the studs when the outside boarding reaches the top. A quarter pitch is sufficient when the rafters of 2x4 scantling are nailed on the frame over the studs. The roof must be made waterproof, but should be made with eaves extending out some distance from the walls to protect them as much as possible from the heat of the sun in summer. The inside of the house should be lined with plank nailed horizontally and the space between the walls should be filled with sawdust or other packing which should be at least two feet deep at the top and a foot thick at the bottom and sides. A ventilator should be placed at the top of the building allowing a current of air to pass continuously over the upper packing, thereby removing the collected vapor. The space between the rafters and above the plates will be sufficient to allow this.

In cutting and storing ice in such a

WILCOX & STUBBS, PROPS. - 1401 GRAND AVENUE - DES MOINES, IOWA

HOLSTEIN-FRIESIAN CATTLE.
HIGH-GRADE HOLSTEIN COWS AND HEIFERS
I AM offering a splendid lot of high grade cows and heifers for sale, all bred to noted bulls and fresh soon. These are from two to five years old. Write at once or come and see me. Address
C. E. VEAK - - - - - - ESSEX, IOWA.

Pure-bred Registered
HOLSTEIN CATTLE
If your cows produce only about 4,000 pounds of milk per year and 160 pounds of fat they are practically worthless. 350 pounds of fat per cow per year should be your minimum requirement.
No matter how poor your present herd is, you can easily raise it to this standard in a few years by the intelligent use of a well selected pure-bred Holstein-Friesian bull.

THE BEST JERSEYS—Some choice bulls, few females. Address H. C. Young, Lincoln, Neb.

way that it may be preserved during the hottest weather some general directions must be observed. Ice should be cut with a saw into blocks of regular size so that they may be packed evenly without leaving space between them. It is preferable that ice which is to be stored should be at least six inches in thickness, but if cut in the manner described it will keep perfectly if not more than three inches in thickness. Ice should be cut in cold, freezing weather and if when packing in the ice house a bucket of water is thrown over each layer to fill the space between the blocks and exclude the air it will keep much better. The doors of the house should be opened a few days before filling to allow the ground beneath to freeze. As the ice is packed boards should be placed inside the doors. After reaching the top sawdust may be packed tightly into the space between the boards and the doors closed. The packing should be carefully replaced each time in the summer after it is disturbed in getting the ice out. J. T. McCoy.

NEWS OF THE SALE RING

Nelson & Sons' Short-horn and Poland Sale.

It seems as though the weather man has a special grudge against S. A. Nelson & Sons, Malcolm, Neb., for he has for several years handed them the worst kind of weather for their sales. It was quite stormy Friday, November 7th, the wind blowing a perfect gale, bringing with it fitful gusts of rain and sleet, yet they had a splendid gathering from several states and made a very successful sale. The Short-horn offering was a good one, and was appreciated by the buyers. There were some bargains, as there is in every auction, and as usual the better things did not sell as high according to their merit as did the more common ones. Nelson & Sons are to be complimented on the good offering they put up, and on the condition in which they had their cattle. Few men have been a stronger help to the Short-horn industry of the West than has been the senior member of this firm. Few of these men that he has so ably assisted were in evidence at his sale, but those that were on hand were men, capable of judging, and that wanted cattle. Wm. Fagan & Sons, Abbott, Neb., were among the best buyers of the sale, as they have been at a number of sales the past couple of years. They secured several head and got good values. R. E. Baldwin, Osceola, Iowa, was a good bidder and got several of the best ones. Jos. Rouselle & Son, Seward, Neb., paid the top of the sale, $330, for the choice January roan bull, Lancaster Goods. He is a nicely bred Cruickshank Duchess of Gloster and one of the nicest specimens of the breed that we have seen sell in some time. He goes to head a good herd. Wm. Steffens, Malcolm, Neb., was a good bidder and one of the best buyers of the sale. Col. Z. S. Branson did the selling and brought to a successful finish one of the best sales of the season and from a discouraging day. Those selling for $100 or more are listed.

SUMMARY.

36 females ..$4,940; average...$137.22
8 bulls .... 1,495; average... 187.10
44 head ..... 6,435; average... 146.27

Immediately following the sale of Short-horns, twenty-three Poland China spring boars were offered. These boars met with a ready demand, making an average of $33 a head. They were sold to I. W. Jacoby, Havelock, Neb.; I Truber, Seward, Neb.; W. R. Devine, York, Neb.; J. E. Cooney, Lyons, Neb.; Frank Davis & Sons, Holbrok, Neb.; Ernest Horneung, Raymond, Neb.; Lee Loder, Waverly; C. L. Walin, Ceresco; A. H. Miller, Ceresco; L. E. Trued, Ceresco; P. W. Pierson, Ceresco; A. J. Muntz, Garrison, Neb.; P. O. Oswold, Wisner, Neb.; F. A. Stocker, Dunbar, Neb.; Lewis Horneung, Raymond, Neb.; J. R. Helms, Lincoln, Neb., A. Anderson, Waverly, Neb.; John Walin, Ceresco, Neb.; Oscar Dinert, Emerald, Neb.; and J. A. Brodd, Ceresco, Neb.

The DeKalb Hampshire Sale.

The sale of H. D. DeKalb, at Council Bluffs, Iowa, on November 4th, was well attended, and he sold fifty-one head of boars at an average of $45.22. Top of the sale was the splendid young boar, DeKalb's King 50th, and he was purchased by Wm. Pamp, Benson, Neb., at $180. There were just a few too many boars in the sale to make a high average, and those who were present got some excellent bargains. Col. Kraschel cried the sale, assisted by Cols. Manifold and Gooding. Below we list those selling for $25 and over:

01. Geo. Annan, Clarinda, Ia.....$130.00
1. B. F. Blind, Blind Village, Ind. 100.00
2. Aug. Schoening, Dumfries, Ia. 40.00

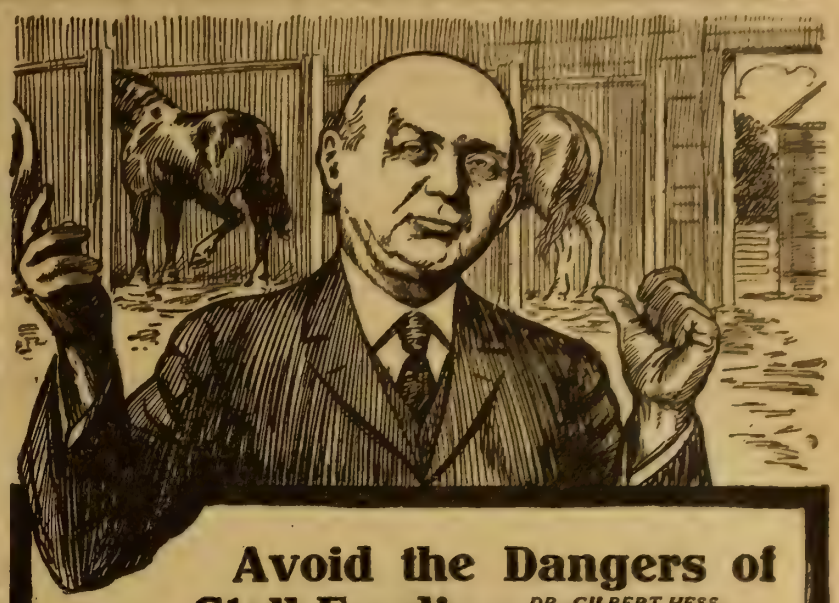
Chas. W. Phillips' Poland China Sale.

The record fall sale of Poland Chinas was held by Chas. W. Phillips, New Sharon, Iowa, on November 4th. Mr. Phillips has been constantly improving his herd from year to year until he has one of the good herds of big-type Poland Chinas in the corn belt and his herd is looked upon as one of the leading sources from which to obtain boars and sows of breed-improving character. No. 7, a February pig by the noted boar Long King's Superior, topped the sale at $200 going to Elijah Story, Kewanee, Ill. J. W. Callahan, Seaton, Ill., secured a great prospect in No. 11 at $150 as did J. E. Mendenhal, Beacon, Iowa, in No. 12, a litter mate at the same price. J. J. Fogaty, Central City, Iowa, secured a good boar in No. 6, a fall yearling boar consigned by J. T. Malloy, Albian, Iowa, at $170. J. L. Guttshell & Sons, Sheffield, Iowa, secured No. 8, 9 and 10, their gilts litter mates to No. 7, the top boar at $82.50 each. The offering was well grown out and was of superior merit. It was a credit to Charles



Avoid the Dangers of Stall Feeding

DR. GILBERT HESS, Doctor of Veterinary Science, Doctor of Medicine

I want to warn you in time that stock taken off pasture and put on dry feed are pretty apt to get out of fix, because corn, grain, hay and fodder do not contain the laxatives so abundantly supplied in grass.

Some of your animals are sure to become constipated, others off feed, rough in the hair, with paleness of the eyes, lips and nostrils, or the legs may stock or dropsical swellings of the abdomen appear, or the urine may become yellow and thick; but the common ailment of all, especially among hogs, is worms, worms.

Dr. Hess Stock Tonic

Makes Stock Healthy. Expels Worms.

Being both a doctor of medicine and a veterinary scientist, I formulated Dr Hess Stock Tonic to correct these evils. It contains a laxative substitute for grass, diuretics to remove dropsical swellings, tonics to improve the appetite and increase digestion and vermifuges to expel worms.

So sure am I that Dr. Hess Stock Tonic will put your animals in a thriving condition, the ailing ones healthy and expel the worms, that I have authorized your nearest dealer to supply you with enough for your stock, and if it does not do what I claim, return the empty packages and get your money back.

Right now is the time to feed Dr. Hess Stock Tonic, because it's the cow in the pink of condition that fills the milk pail, the steer with an appetite that lays on fat, the horse that digests its dinner that pulls on the bit, the hog that is well and worm-free that gets to be a 200-pounder in six months.

Dr. Hess Stock Tonic is never sold by peddlers—only reliable dealers; I save you peddler's salary and expenses, as these prices prove: 25-lb. pail $1.60; 100-lb. sack $5.00. Smaller packages as low as 50c (except in Canada, the far West and the South).

DR. HESS & CLARK, Ashland, Ohio

Dr. Hess Poultry Pan-a-ce-a
A splendid poultry tonic that shortens the moulting period. It gives the moulting hen vitality to force out the old quills, grow new feathers and get back on the job laying eggs all winter. It tones up the dormant egg organs and makes hens lay. Also helps chicks grow. Economical to use—a penny's worth is enough for 30 fowl per day. 1½ lbs. 25c; 5 lbs. 60c; 25-lb. pail $2.50. Except in Canada and the far West. Guaranteed.

Dr. Hess Instant Louse Killer
Kills Lice on poultry and all farm stock. Dust the hens and chicks with it, sprinkle it on the roosts, in the cracks or keep it in the dust baths, the hens will distribute it. Also destroys bugs on cucumber, squash and melon vines, cabbage worms, etc., slugs on rose bushes, etc. Comes in handy sifting-top cans, 1 lb. 25c, 3 lbs. 60c. Except in Canada and the far West. I guarantee it.

Now! A 6 H-P Engine $99.35

MISSOURI FARM LANDS. No better grain and stock land anywhere. Write for list and prices. Fulton Real Estate Agency, Fulton, Missouri.

Why Rent Farm Land —You Can Do Better

Stop renting—you don't get ahead that way. The other fellow gets too much of the profit. I can tell you how to get a farm of your own and start it right with very little money. Government land, small cost and payments so easy that they won't bother you.

The C. B. & Q., Railroad pays me to help you get a farm without much money, and I want you to write so I can tell you about it. Do it TODAY. D. Clem Deaver, Burlington Route, Room 371 Q Bldg., Omaha, Neb.

MINNESOTA LANDS!

WE are offering selected and improved Southern and Central Minnesota farms. Also a few choice wholesale propositions. Write us about what you are looking for. Address

STEWART LAND COMPANY

305 Jackson Street ST. PAUL, MINN.

STATE LAND SALE IN NEW MEXICO

ON December 8th, 1913, there will be sold at the court house in Deming, New Mexico, **18,000** acres of land. Practically all the land will be sold in tracts of six hundred forty acres. The land is in what is known as the shallow water belt, and irrigation by pumping is being operated successfully on lands in that vicinity. The terms of sale are cash, or ten per cent of the highest bid, the balance divided into thirty equal annual payments, with four per cent interest on all deferred payments. **Robert P. Ervien, Commissioner of Public Lands, Santa Fe, N. Mex.**

BUY FROM OWNERS

I HAVE several improved farms in the famous Red River Valley, close to towns, schools and creameries. Will sell these farms at low price, long time, easy terms. Will furnish all the milch cows and hogs that can be handled on these farms, and let you pay for same from proceeds. Five hundred dollars will handle 160 acres. **Look This Up, Mr. Renter,** also wild lands in Wisconsin and Minnesota.

S. D. WORKS,

405-6 Commerce Bldg., St. Paul, Minnesota.

FOUR IOWA FARM SNAPS

180 acres well located, good improvements, strong land, $85.00. **200** acres finely improved farm, fenced hog tight, $90.00. **160** acres of gently rolling land, fair improvements, $75.00. **200** acres close to town, 160 acres level, fair improvements, $92.50. Good terms on all of these farms. For catalog and further particulars address **SHELDON & TEDFORD, MT. AYR, IOWA**

Minnesota's Choicest Corn Land

IN the garden spot of Southern Minnestoa, fine improved farms $75 per acre and up. Prices advancing rapidly. Come at once. Address **A. M. Kavanagh, Spring Valley, Minnesota.**

AUCTIONEERS

LET us sell your farm and other real estate at auction. We are making successful sales for others. CAREY M. JONES & CO., Auctioneers, 14 N. Sacramento Blvd., Chicago, Illinois.

100 CHOICE farms in the garden spot of Southern Minnesota, where corn is king. Price $60 per acre and up. Prices advancing rapidly. Come now. Free list. The Paffrath-Schmid Company, Springfield, Minnesota.

Phillips as a breeder and fitter. W. H. Cooper did a most commendable job of auctioneering and deserves much credit for the success of the sale. A list of those selling at $30 and above is appended:

1.	A. B. Henry, Beacon, Iowa...	$125.00
2.	Al Johnson, Lynnville, Iowa.	135.00
3.	J. F. Beasley, Smithshire, Ill.	75.00

	Also sow, W. K. Neil, New Sharon, Iowa	75.00

Forty-one head sold for $2,670.50; average 65.15.

The L. B. Williams Sale.

The sale of L. B. Williams & Son, at Sciola, Iowa, on November 6th, made an average of $31 on forty head. The offering was in nice condition and should have brought more money. The Atlantic Northern & Southern train was ditched this side of Atlantic, and the buyers from the north were not able to get down and this militated against any high average, and those that got there got some splendid bargains. The top of the sale was a spring boar, No. 8 of the catalog, and he was bought by W. J. Diller, McPherson, Iowa, at $51. Col. Harve Duncan cried the sale, assisted by Col. L. R. Hamilton, of Missouri. Below we list those selling for $25 and above:

1.	H. E. Heath, Massena, Iowa..	$39.00
2.	C. A. Miller, Mt. Etna, Iowa..	37.00
3.	Chas. Quist, Stanton, Iowa....	39.00
4.	Oscar Johnson, Mallin, Iowa..	29.50
7.	Oscar Johnson	29.50
6.	Oscar Johnson	29.50
5.	H. J. Chickering, Villisca, Ia.	35.00
8.	W. J. Detler, McPherson, Ia..	51.00
9.	F. J. Nelson, Stanton, Iowa...	31.00
10.	John Eblen, Massena, Iowa...	27.50
11.	Aug. A. Johnson, Stanton, Ia..	27.00
16.	Archie Ellis, Sciola, Iowa....	31.00
23.	J. W. Holdren, Villisca, Iowa.	32.00
24.	J. H. Krauth, Massena, Iowa.	36.00
25.	H. E. Heath	26.00
26.	Oscar Johnson	42.00
21.	H. E. Heath	26.00
22.	H. E. Heath	26.00
27.	A. Z. Scott, Massena, Iowa....	32.00
28.	J. H. Kraut	37.00
29.	F. O. Danborn, Stanton, Iowa	26.00

42.	O. D. Lovig, Nodaway, Iowa..	25.00
41.	G. A. Halbert, Elliott, Iowa..	34.00
43.	J. H. Sandusky, Villisca, Iowa	25.00
50.	H. E. Burgus	45.00
31.	J. H. Krauth	37.00

Prettymans' Poland China Sale.

Obadiah Prettyman & Son, Fairfax, Mo., held a very successful sale of big-type Poland China boars and gilts on November 3d selling forty-eight head at a general average of $31.50. This was their first public sale and neighbors who had bought breeding stock of these gentlemen before were the strongest supporters at the sale as they had had such good success with former purchases. The top of the sale was $42.50, three boars selling for that amount. This shows the uniformity of Prettyman & Sons' offering. Col. H. S. Duncan did the selling in his usual satisfactory manner. Following is a list of sales over $25:

1.	J. P. Mackintosh, Tarkio, Mo..	$42.50
2.	John Bradfield, Fairfax, Mo....	37.00
3.	John Bradfield	37.00
4.	J. O. James, Braddyville, Iowa	37.00
5.	Rankin Farms, Tarkio, Mo....	32.00
6.	Yuba New, Fairfax, Mo.	42.50
7.	J. P. Mackintosh	42.50
8.	Rankin Farms	32.00
9.	J. O. James	37.00
10.	A. D. Fellows, Fairfax, Mo...	40.00
11.	J. O. James	37.00
12.	J. F. Smith, Fairfax, Mo.	36.00
13.	Yuba New	45.00
14.	Harman Volman, Corning, Mo	34.00
15.	Edmond Roseline, Corning, Mo.	34.00
16.	Edmond Roseline	34.00
17.	J. P. Miles, Fairfax, Mo.	36.00
20.	E. P. Taylor, Fairfax, Mo.	29.00

36.	Geo. Prettyman, Fairfax, Mo.	35.00
37.	Walter White, Fairfax, Mo....	27.50
39.	Geo Prettyman	40.00
48.	W. H. Hineman, Fairfax, Mo.	41.00
49.	Geo. Prettyman	42.00
50.	Walter White	43.00

The H. O. Williamson Sale.

One of the best Poland China sales held this fall was that of H. O. Williamson, at Herman, Neb., on November 5th, when he sold fifty head of boars and sows at an average og $45.73. Sixteen boars in his sale made an average of $49.56. The top of the sale was Baird's Maid, a Big Columbus sow with a litter at side and she went to Jean Burdick, Herman, Neb., at $116. His offering was a cracking good one from beginning to end and was well appreciated by those who attended the sale. Col. Alvab Manifold cried the sale and did good work, and was assisted in the ring by Cols. Russell and Marsh. Below we list those selling for $30 and above:

	Defender Look, Iver S. Johnson, Stanton, Neb.	$ 70.00
1.	Tom Cushman, Herman, Neb.	46.00
2.	Jean Burdick, Herman, Neb..	60.00
3.	Chas. Laughlin, Herman, Neb.	65.00
4.	Jean Burdick	48.00
5.	H. C. Weddle, Craig, Neb....	50.00
6.	Jean Burdick	116.00
7.	Jean Burdick	42.00
8.	W. P. Cowan, Wheaton, Ill...	102.50
9.	W. E. Willey, Steele City, Neb.	50.00
10.	Fred Hurrell, Craig, Neb....	42.00
11.	Henry Dorr, Remsen, Ia....	47.00
12.	W. G. Smith, Stanton, Neb....	39.00
13.	S. D. Womble, Craig, Neb....	36.00
14.	O. F. Applegate, Oakland, Ia.	36.00
15.	H. S. Giltner, Oakland, Ia....	66.00
16.	J. H. Healy, Manilla, Ia.	38.00
17.	Ed. Askwig, Oakland, Neb...	37.00
18.	Ed Askwig	36.00

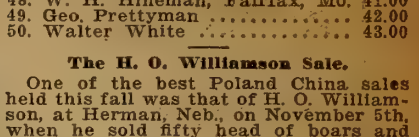
The Humane Check Rein

Reduces the High Cost of Driving



Will save you more Whips, more Temper, more Horse Energy, more Feed, more Harness Repairs than any other invention ever made.

It will outwear 3 ordinary hooks and reins on the surest footed horses. It promotes greater horse efficiency. Its 10-inch roll steel spring **gives with every step** your horse takes---lets him travel free and easy, farther with less urging, makes him give you **more miles on less feed,** lets him lower his head to rest his neck or pull a hill, or a mudhole.

No More Broken Overchecks

No more Sore Mouths, Tails, Foreheads, or Strained Neck muscles with the Humane Check Rein. You can fit it to any harness---just bolt it to the backband. You can adjust it to any mouth---tough or tender. It's been tested for over two years on all kinds of horses, under all sorts of road conditions with most pronounced success. It will soon pay for itself.

Sent anywhere, postpaid, for $1. Money back if not satisfied. Will send particulars on request. **Agents wanted everywhere.** Send for special proposition.

HUMANE CHECK REIN COMPANY,
Box 1-A, Welch, Oklahoma

CLOVER CHEAP Now is the Time to Buy Prices lowest in years. Buy before advance and save money. Get our special low prices and free samples of our Iowa Grown New Crop Recleaned **Tested Clover** and **Timothy** Seed. Also Alfalfa, Alsike, Sweet Clover. All kinds grass seed. 76-page catalog free, quoting all field seeds. Save money by writing at once. **A. A. BERRY SEED CO., Box 103 CLARINDA, IOWA**

A FINE MISSOURI FARM

FOR SALE. 350 acres, lies 7 miles from Paris, the county seat of Monroe county, Missouri. This farm is well improved, all level prairie land, good black soil. This is one of the best stock and grain farms in the county. If interested, write **A. M. CURTIS, Paris, Monroe Co., Missouri**

Better Results by Better Methods

By C. E. Andrews

MUCH is being said and written about vaccination: The writer wishes to refer the reader to the recent article written by Mr. Beverly, D. V. M., published in the Iowa Homestead, October 9, 1913.

Dr. Beverly states:

This year has been a notable one in the history or hog raisers, namely, because of the large number of animals lost and the poor results obtained from vaccination. At no time has serum been used as generally throughout the state as in the past year, and the results obtained have been far below expectations. Hence, many farmers condemn serum on account of its being inefficient to stop the disease. It may be due, first, to the use of poor serum, second, to serum not being administered in proper doses; third, to vaccination for cholera when another disease is present.

"I have refused many farmers vaccination because I could not find sufficient evidence of cholera to warrant treatment. Many of these farmers vaccinated anyway and they lost their hogs and the money paid for the serum and the services of the party who vaccinated them. Results cannot be obtained unless post-mortems are held on a number of animals to ascertain the nature of the disease and the use of quack remedies to prevent this disease is a waste of time and money."

Dr. Beverly does himself an injustice when referring to "quack remedies," since he does not discriminate between the quack and the meritorious remedy the same as he discriminates between an inferior and a reliable serum, for thousands of hogs have been saved with an honest remedy. In fact, the writer knows many instances where farmers used a reliable remedy and saved all their hogs, while adjoining neighbors who vaccinated lost more than 75 per cent of the entire number vaccinated. yet, no doubt, Dr. Beverly has grounds for making his statements, as it is possible to find fake remedies and fake stock foods, but he should be as broad with the remedy proposition as he is in the second paragraph of his article endeavoring to show the difference between good and bad serum. The wording of his article would prejudice the farmers against all remedies, whether good, bad or indifferent. While he, with many other authorities, admits that there are many makes of serum on the market that are worthless, yet the effectiveness of a reliable serum is not denied.

In all vocations of life one may find fake propositions: fake lawyers, fake bankers, fake docto ', and fake government officials, which has been proven by government investigation in the past twelve months, yet in spite of this there are good, honest bankers, honest lawyers, honest doctors and honest men endeavoring to serve the public, and in like manner it is possible to find honest men manufacturing stock remedies, endeavoring to give value for money received, and if the government officials and veterinaries would stop condemning good remedies and advocate their use to condition the animals along with the serum treatment, and never allow a herd of hogs to be vaccinated unless the conditions were right, the results of vaccination would be many times more effectual.

Not long since The Kansas Farmer published an article written by Geo. F. Barb, D. V. S., Topeka, Kansas, wherein he states that the sole cause of whatever failures may have been experienced with the use of serum in the past, and the great opposition to its use by many experienced and intelligent hog growers, is due to the many makes of serum that are on the market which are worse than worthless, and that many hogs have died of blood poison caused by the introduction of infection with the insertion of the needle.

While this is true, why does the government permit the sale of inferior serum because if it is not reliable it is, without a question, spreading disease all over the country?

It is not the purpose of the writer to condemn a good serum, but the fact remains, nevertheless, that many serums are spreading the disease instead of checking it. One of the universal troubles and the greatest handicap of a good serum is the attitude that vet rinaries take in condemning all remedies. They are absolutely standing in their own light, fighting the one essential thing— a remedy to condition the hogs before and after being vaccinated.

The writer can find thousands of places where vaccination has been administered without even holding a post-mortem, which is against the instructions of Dr. Beverly in the first part of his article) or taking the temperature to see if it was possible to vaccinate with success, and when veterinaries will go out and vaccinate simply for the compensation, without taking the temperature and holding post-mortems, there is sure to be evil results, for if the animal has typhoid fever, pneumonia, worms and many other minor troubles, the vaccination is adding to the animal's already weakened condition, but I am not going to say that the farmer had just as well throw his money away as to spend it for vaccination, as Dr. Beverly says concerning stock remedies, for there is no doubt virtue in a good serum properly administered.

If the veterinaries would use a reliable remedy and condition the hogs three to five days becore vaccinating, then follow the treatment with a good remedy that will act as a blood purifier, fever suppressor, tonic and laxative, they would gain many advantages with serum. Vaccination will always raise the fever, fever will cause congestion and complications, hence no reasonable man will dispute the fact that the animal should have a reliable remedy bef re and after being vaccinated. In fact, a hundredfold better results would be obtained.

Just recently one of the state officials from Iowa and a local veterinary vaccinated more than 200 head of thoroughbred hogs for a party in northern Iowa. In this case, to their credit, they did take the temperature in advance of the treatment and pronounced the herd healthy. In fact, the herd was healthy, for the party had not lost a single animal and the veterinary pronounced the temperature of each animal normal, but this party was forced to vaccinate in order to ship a few head out of the state, as the Iowa law forbids shipment without a certificate of health, and in order to secure this certificate the hogs must be vaccinated. While the writer does not wish to attack the laws at this time, yet it looks like a terrible injustice imposed upon a man to make him vaccinate $10,000 worth of thoroughbred hogs to enable him to ship a few out of the state. The injustice of such a law is apparent and should be corrected. This party at first refused to vaccinate more than the few in question, but the veterinary told him that the entire herd would be subject to cholera unless they were all vaccinated, hence submitted to have the herd vaccinated and within three days' time the entire herd was sick and dying. The owner lost several very valuable animals. Think of it, after pronouncing the herd healthy prior to the treatment and in three days' time have $10,000 worth of sick hogs.

This party knew the value of a good remedy and immediately wired a certain manufacturer for their expert advice and when their representative arrived the veterinary admitted that the administering of the serum had evidently caused a severe case of blood poisoning. However, the expert hog doctor began treatment of the herd and saved all but two, according to the owner's written statement. So it is plain to be seen that there is danger connected with vaccination, even under the best of conditions, to say nothing of fake serums, which is admitted by Dr. Beverly and many other authorities which the writer could name, as well as from fake remedies.

It is not the intent of this article to prejudice the reader against the use of a good serum, but in order to get better results from vaccination the hogs should be kept on a light diet for at least three days and conditioned before injecting serum into their system. Then they should have a remedy to keep their temperature normal and regulate the system after the treatment.

The writer claims that serum will never be a success nor stop the ravages of cholera until a law is passed forbidding anyone to vaccinate hogs who are not qualified sufficiently to hold a post-mortem and know when and where to find cholera lesions. Then forbid the sale of serum that does not test to a certain standard. If a good serum will prevent and check the disease, pass it along, but for the sake of thousands who are suffering heavy losses, stop the sale of poor serum and stop the improper handling of same. Then the serum proposition will assist in checking the disease instead of spreading it, for when serum is injected into a herd of sick hogs that is infected with typhus fever and other diseases, evil results will certainly follow.

A recent article published by W. M. Carmichael, of the Department of Animal Husbandry of the University of Illinois, states that beyond any doubt in the minds of those who have made a careful study of the situation hog cholera is spreading rapidly rather than getting under control and the reason for this is that no systematic effort has been made to subdue it, and there is considerable doubt in regard to the possibility of ever controlling the disease by a method which seems to help spread it.

In the same article Dr. Carmichael states that the State of Illinois prepares serum at its laboratories, which is distributed free of cost. The writer believes this to be a dangerous method. Not wishing to criticise the great state of Illinois, but when serum is delivered to the farmers upon request and local men, without experience, vaccinate under any and all conditions, the results are sure to be anything but flattering, and in a sense, accounts for the doctor's statement that hog cholera is rapidly spreading.

The farmer should insist upon a post-mortem being held before injecting serum into his herd, and if found that they have a temperature of 106 or 108 degrees, forbid the treatment until the herd has been coditioned to receive same, thus insuring greater results from the serum used and more credit to the person administering same.

Butter makers of New Zealand have established an agency in Chicago for the sale of their product.

The Price of Beef Is Going Up!

The new tariff law has little or no effect in checking the upward trend of beef prices. The beef shortage is world-wide. The day of cheap beef is past.

Plan Now to

"Cash In" at High Prices

Eventually you will have to raise more beef cattle—the fertility of your soil demands it—so why not figure on starting your herd now? First hand study of the subject, information showing how to profit by the strong and steadily increasing demand, how to secure the greater fertility of soil which stock raising insures, may be had by visiting the

International Live Stock Exposition

Union Stock Yards, Chicago
Nov. 29 to Dec. 6, 1913

There you can meet and talk with men who have made the greatest successes in stock raising and learn how they did it; you can see, and if you like, buy pure bred animals and become acquainted with the men who produce and sell them.

And remember the rest of the Exposition—the demonstration of new methods, new machinery, new exhibits, the evening entertainments, the Chicago Theatres and the excellent opportunities for shopping.

It Will Pay You to Make this Trip

Shall we see you on one of our Chicago bound trains? Information as to fares and schedules may be had from the nearest Great Western agent or from

CANADA'S OFFERING To The Settler

The American Rush to Western Canada is Increasing

Free Homesteads In the new Districts of Manitoba, Saskatchewan and Alberta, there are thousands of Free Homesteads left, which to the man making entry in 3 years' time will be worth from $20 to $25 per acre. These lands are well adapted to grain growing and cattle raising.

Excellent Railway Facilities

In many cases the railways in Canada have been built in advance of settlement, and in a short time there will not be a settler who need be more than ten or twelve miles from a line of railway. Railway Rates are regulated by Government Commission.

SOCIAL CONDITIONS. The American Settler is at home in Western Canada. He is not a stranger in a strange land, having nearly a million of his own people already settled there. If you desire to know why the condition of the Canadian Settler is so prosperous write to any of the Canadian Government Agents and send for literature, rates, &c., to

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Rural Route No. 56, Box 21, Philo, Illinois.

WITH THE EDITOR.

This is laundry day, and here are two lots of napkins. This set is new, and, on first acquaintance, made a very good appearance. The laundry proved their undoing; they are "sleazy;" they are not what they seemed; they didn't "come out in the wash."

The other lot was made from a worn table-cloth, to be used for emergency calls only. However, they are from the genuine article in table linen, and the oftener they are laundered the better they look; they have retained the beautiful, satiny sheen of their forerunner, and so they "came out in the wash."

This dress: it is crooked. "Wasn't hung on the line straight," someone said. "Huh!" sniffed the matter-of-fact youngster, "you can't make me believe that anything that is straight will ever come out crooked 'in the wash.'"

A tailored suit was purchased, for herself, by a mother of grown daughters; it was a very conservative make, and of a quiet, unobtrusive color. The tailoring was faultless, but it was only "homespun," and the daughters were disappointed. The suit was worn with more or less disapproval, until it one day got soaked in a sudden downpour of rain. When the wrinkled, draggled garment was cleaned and pressed it came through the ordeal looking as fresh as new. So long as that suit lasted it ever after commanded the respect it merited, because it "came out in the wash."

A man had the misfortune to be misjudged, and for ten years was persecuted almost beyond endurance. He went quietly on his way, neither denying nor affirming, did his duty as he saw it, and finally the turning point came. When the tide of public favor turns, it flows rapidly the other way. So it was in this case; people, so far as they could, made amends for their former unkindness. This instance, in a modified form, would apply to any one of us. Everyone carries a burden, and everyone may, by persistently doing the thing his or her inner conscience approves, win out.

About our associates: are they the genuine article? Are they "real people?" Some of us there are who are confused as to who are genuine people. Much might be said on this subject, but, from a long experience as teacher and mother, I find one object lesson to be of more practical value than a whole volume of "wrote work."

A young girl possessed a wonderful talent for drawing. By denying herself the dainty clothes like those which her companions wore, and which every normal girl desires to possess, she was enabled to take training from competent masters. By patience, self denial and close application, she in due time became noted as a decorator of china. From coast to coast discriminating people sent valued possessions to her to be decorated.

This woman one day met a chance acquaintance who had at one time been her pupil. In the course of their conversation the name of another pupil was mentioned, one who was gaining some notice in the world of art. "Yes," quoth the one accustomed to receive deference from the better class of people, and fawning from the other kind, "she is getting to be quite a nice, worthy young woman, and they do say that she used to clean the cow stables!" "Madam," returned the artist, "I, too, have cleaned cow stables!"

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Live a little; comfort a little; cheer thyself a little.—Shakespeare.

My friend is that one whom I can associate with my choicest thought. —Henry David Thoreau.

Don't save all your smiles for the parlor; use a few in the kitchen.—Anon.

Do not keep the alabaster box of your love and tenderness sealed up until your friends are dead. Fill their lives wiht sweetness. Speak approving, cheering words while their ears can hear them, and while their hearts can be thrilled and be made happier. The things you mean to say when they are gone, say before they go. The flowers you mean to send to their coffins, send to brighten and sweeten their homes before they leave them. If my friends have alabaster boxes laid away, full of fragrant perfumes of sympathy, and affection, which they intend to break over my body, I would rather they would bring them out in my weary and troubled hours, and open them, that I may be refreshed and cheered while I need them. I would rather have a plain coffin without flowers, a funeral without eulogy, than a life without the sweetness and love emanating from sympathy. Let us learn to anoint our friends while they are yet among the living. Post-mortem kindness does not cheer the burdened heart; flowers on the coffin cast no fragrance backward over the weary way.

Polishing Furniture.—First wipe the dust from the furniture, then wipe with a cloth wrung out of water into which a very little vinegar has been added, and let the furniture dry before applying the polish. This treatment will be found to be very good, as it removes all the dirt and helps the furniture take a better polish.

Washing Blankets.—Sometimes in the rush of spring work, blankets are stored without washing. A noted school of household science gives this method, which is excellent: The essential things are: A fine, sunshiny day, plenty of soft water, melted soap, free from alkali, and ammonia or borax. Avoid heat, rubbing soap on the blankets, and rubbing on the board, as this will cause the blankets to shrink. To a tub of tepid water, add one tablespoon ammonia or borax, together with enough melted soap to make a suds. Wash the blankets by kneading and squeezing, never by rubbing. A washing machine saves much hand labor. Rinse in two waters the same temperature as the washing water. Run through a wringer, shake and stretch well. If they are shaken two or three times while drying, they will be much fluffier and softer.

For the Closet.—Purchase a curtain pole, the length of your closet. Fasten this at the desired height, by means of portiere brackets. In this way you will have the use of the sides of the closet, besides the pole, on which to fasten hangers. This will be found a superior way to hanging coats and suits against the wall.

For the Cook.—A Country Pot Roast. —In a hot frying pan, melt a lump of butter, or fry out a small piece of pork. While very hot, put in the roast and brown on all sides. Do not insert a fork or the juices will escape. When well browned, place in a heated kettle, pour water in the frying pan, to get any juice that may have escaped, and pour over the meat. Cover closely, and cook slowly two hours for a four-pound roast. Keep a cupful of water under the meat, and turn once in a while. Sprinkle a little flour and salt over the meat, fifteen minutes before serving.

Baked Onions.—Peel as many firm, medium-sized onions as your family will require. Put them in a saucepan and parboil until tender but not done. Remove and place in a baking dish, season with salt, pepper and tiny dots of butter. Cover with finely rolled bread crumbs and cover all with a cup of cream or rich milk. Bake in a moderate oven until a rich golden brown. Serve in individual dishes.

Steamed Apple Pudding.—Pare, core and quarter a dozen apples. Place in a baking dish, and cover with a rich biscuit dough, rolled three quarters of an inch thick. Place over a kettle and steam until the apples are tender. Serve with hard sauce.

Hard Sauce.—Cream one-third cup butter until very soft, gradually adding one cupful of powdered sugar, and continue beating until the sauce is light and creamy. Pile on a fancy plate, chill and serve at table.

AMONG OURSELVES.

In response to the call for letters that will be a help to by far the greater number of us several letters of exceptional merit have reached my desk. This is as it should be. It is good to know that, as a whole, people are not only willing, but glad, to be of help to their fellow-workers; and workers we all are, trying to not only do our work a little better, but a little easier. Now, sisters, in the midst of it all let's not forget that here is something due to our family besides food and clothing. Problems will come to many a woman before her family is grown that will cause the actual labor which she has done seem as nothing in comparison; work, after all, is but the means to the end. To meet these later, and I may

safely say, heavier burdens, it is not only right, it is a duty she owes to her children, to save her strength and keep her mentality bright. Further comment is not necessary. We have a communication from Mrs. "C. J. R.," on this subject, that I am glad to present to our club. The title reads, "The Rest that Comes Between:"

These are the gifts I ask of thee,
Spirit serene,
Strength for the daily task,
Courage to face the road,
Good cheer to bear the traveler's load,
And for the hours of rest that come.

Recreation is as essential to mental, physical and moral development as food and drink, and is just as surely an economic investment. The human machine is not different from any other machine, it needs rest and repair. The life of the locomotive which seldom gets to the shop for repairs is short, while the one that goes to the shop for repairs after each run, lasts almost indefinitely. Many people are wearing out and rusting out at the same time. A week's vacation furnishes thought and inspiration, not for seven days, alone, but for the whole year. Strange as it may seem, it is true that goodness often defeats its own aim. Of this there is no more pathetic example than that of the over-conscientious woman. Anxiety to do right shortens her vision to a very narrow routine and obscures the possibilities of life and joys to herself, and the better opportunities to be of service to others. She hammers away in the old rut so long that nothing can be gauged from a sane standpoint; so many grapes must put up—so many apples must be saved, it would be little less than a calamity for them to go to waste; no mattter that the weather is too warm to work with safety, we've "got to save. Save what? A few second-class apples at the expense of health, strength and temper, for this is the very kind of woman that is forever complaining of not being appreciated. Which is the better,

To cook and stew,
To pickle and can,
Make jell and jam,

—until her poor tired body is one great throbbing ache, and her nerves are so worn that she cannot keep the sharp, rasping tone out of her voice, or listen with any degree of sympathy to the interests of her children. Let the old apples rot; take your children by the hand and go for a stroll. How the children enjoy these trips with mother? How much more beauty they see in everything if mother is along. The bright autumn leaves take on an added degree of brightness and the very squirrels seem more frisky. How much more the beauties and grandeur of nature mean to them, with her there to help enjoy it. Believe me, sisters, there is nothing you can prepare with fruit and sugar that will so "sweeten" their lives and "preserve" their love for the good and beautiful, as these trips with you. And how rested you will be? Try it.

This member speaks from the heart and a full experience. It is easy to know "who is who" in these matters. Easy to distinguish "heart" work from "wrote" work. Every mother will, I am sure, partly understand. Now, listen: Mothers, you will not fully understand just what it all means until future problems, of which you do not now dream, come into your babies' lives. Not only help them to learn the ways of nature, do everything that is possible, while you may, to get a firm hold on their "heartstrings." To use a boyish phrase, "Get next with 'em." It is the only way, and will beat singing the "Wandering Boy" some time in the future, to a "frazzle."

We have a splendid community-building talk, by Mrs. Porter:

Ours was an all too usual condition in the country at this time. A community with a church left standing idle, because of removals that had weakened the membership until it was no longer kept up. A cemetery overgrown with weeds, and infested with chiggers, until it had become not only an eyesore, but a menace. This in a country of well-kept farms and prosperous people, who felt it a disgrace that nothing was being done to mend matters, yet who, individually, dreaded to take the first step for fear of being thought presuming. It was talked over frequently, all acknowledging that something should be done. At this juncture the women of the neighborhood assumed control. They called a meeting and organized a club which they call the "Ladies' Aid," as that was the most appropriate name presented. The officers who were elected got together and formulated a constitution and by-laws. This differs from other ladies' aids, in that it is under no church denomination. Any, who will may join, with the understanding that the funds are to be applied, first, to the upkeep of the cemetery and, after that, to any good cause. During the year and a half that the club has been in existence it has paid for a lawnmower, and hired a man to mow the cemetery and church grounds, bought shingles to repair the church, paid for flowers for funerals which have occurred among the families of its members, and are now to purchase a new organ for the church. Last year, besides all expenses, which were very heavy, $100 was put in the bank. The heartiest co-operation is manifest and the best feeling prevails. As an outcome, we have a well-kept church building, where a thriving Sunday school is held, and a cemetery that is a credit to any community. The material benefit to be derived from a club of this kind is not the greatest, by any means. It would be impossible to measure the good derived by the members themselves. It takes the busy farm woman away from home, and this of itself is a blessing. We hope to continue to keep our meetings informal and maintain the spirit of hearty good will which now exists.

Dear Mrs. Porter, from out of your busy life won't you give us occasional reports of this club that you have formed? It is an inspiration to others who desire to do something along the same line and do not know exactly how to begin. Winter will soon be here, and it is the desire of the members to make this club more interesting than ever. We need different view-points from different members, and every one will, I am sure, add her mite.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

4th Quar. Lesson 7, Deut. 31:1-8; 32:48-52, Nov. 16, 1913

THE DEATH OF MOSES.

No human life was ever more full of scenic incident than that of Moses. From his wave-rocked cradle onward it was a march of stirring events, prolific of themes for the artist. These circumstances come to memory with the mere mention of Moses' name. The climax of this series is reached in Moses' death. No human demise surpasses it in a certain quality of weirdness. The story is that, on one of the many occasions on which the Israelites "murmured" in the wilderness, Moses was unusually incensed against them, and cried, "Hear now, ye rebels! Must we fetch you water out of this rock?" For some quality in this action which is not clearly defined, Moses was denied the privilege of entrance to Canaan. Aaron was already dead, and Moses had received his token. He uttered his stately farewell, chanted his song, and pronounced his blessing, and then began his solitary death journey to Nebo. There is no word of protest. He had certainly gained in submissiveness since he uttered that piteous cry, "I pray thee, let me go over." Josephus says he withdrew amidst the tears of the people, and that the elders and Eliezer and Joshua followed part way up the mountain. At length he reached the peak named Nebo. A miraculous vision of the entire land of promise is not necessarily involved. What he saw was a sample of the whole to the remotest limits named. The death of Moses has been idealized until one is lost in a maze of curious speculation. The rabbis say, for example, that Moses died by a kiss of the Lord. That in the act, Jehovah drew is life from him. This is elaborated from the phrase that Moses "died by the mouth of the Lord." The burial of Moses is made a mystery also. The tradition is that Jehovah himself buried him. The Septuagint, however, has it "they buried him." If those who attended to the burial of Moses kept their secret, and made no record of it, after their death it could be truthfully affirmed that "no man knoweth the place of his sepulcher." Jude makes reference to some Jewish tradition when he speaks of Michael contending about the body of Moses. These are matters speculative. They afford a fertile field for the imaginative, but for the average person the moral qualities of the man are confessedly more important than the accidents of his death and burial. Thus, for example, the death of Moses was undoubtedly intended to be exemplary. He was a lawgiver, but he was also himself a lawbreaker. He must suffer in sight of all the people the penalty of the law which he not only gave, but also broke. Again, it was manifestly unfit that the grave of one whose habit was to efface himself during life should become the Mecca of adulation. This self-forgetfulness has splendid illustration in Moses' very dying hour. He prays for a suitable successor, and cries, "Let Jehovah set a man over the congregation." This living for others has still further ex-

A Girl who asks— "May I trim your Hat?" And free of charge

She trims thousands of hats every year. She does nothing else, in fact. So far she has trimmed and made over some five thousand old hats, and made them look like new. She learned how to do it in New York, Paris and Philadelphia. And she does it by mail and without charge.

She is the Millinery Editor of *The Ladies' Home Journal*, and thousands of girls and women have learned to rely upon her to make a hat last more than one season, and to tell them what to do with a hat that is too good to throw away. In addition she answers questions relative to the dressing of the hair.

She does it in part each month in *The Ladies' Home Journal*, but her greatest work is done by mail, in personal letters, full, comprehensive, and directly helpful to the individual need. Her work is part of the personal service that the magazine gives to its readers, and that has made it a living, human institution that goes beyond print and paper and reaches out a helpful hand of actual service. A booklet, entitled "The Story of 600,000 Invisible Hands," tells something about this service. A postal-card request will bring a copy.

A year's subscription to *The Ladies' Home Journal*, by mail, costs $1.50, or it may be bought from any Newsdealer or Boy Agent at 15 cents a copy.

You Can Not Be Too Careful

When it comes to the question of your children's health.

It is not always enough to know what are wholesome and proper foods for children—you must see that you get them pure and good also.

Farmer Jones SORGHUM BLEND SYRUP

Try This Fine Nut Candy

One and one-half cups Farmer Jones Sorghum, three-fourths cup granulated sugar, three-fourths cup butter, one-half pound chopped figs, one cup pecans, one cup English walnuts, pinch of baking soda. Boil sorghum and sugar until it thickens, then add the butter and continue boiling until it hardens when tried in cold water. Add the soda, chopped figs and nuts whole. When thoroughly mixed pour out on greased platter. **FREE**—Farmer Jones Recipe Book on request.

Farmer Jones Syrup is made from the pure, wholesome juices of the sorghum which we grow ourselves. These are refined and reduced to syrup by methods so clean, so perfectly sanitary through every step of the process, that absolute purity is assured.

No other Sorghum Syrup is prepared so carefully — so honestly. From seed to can we do it all.

You can use it plentifully at every meal—the children will enjoy the plainest food with Farmer Jones to tempt their appetites.

Packed in 5 and 10 pound friction-top tins—easy to open—easy to close up again.

We include cane syrup with an addition of corn syrup to prevent fermentation

Ask Your Grocer

If he shouldn't happen to have it—he'll get it.

Send Us 5c in stamps to pay postage and we will forward you a sample can of FARMER JONES SYRUP and a Recipe Book—see above.

W.W.Kimball Co., 3738 Kimball Hall, Chicago

emplification in the fact that while he led Israel up to the threshold of Canaan, he did not enter himself. He put them in the way of a goodly possession, in which he was not to have any share, even to the extent of pressing the soil with his foot. Thus, in sacrifice of personal aims and gains, he indicated in advance the crowning grace of the Prophet who was to be like him, though greater. What Moses was and did, these are the dynamic facts. What became of his body is matter of indifference. The latter is left uncertain, the former is recorded with precision. Not only is Moses' name hewn out on time as on a rock, but "he stands on time as on a pedestal."

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6347 Misses' and Small Women's Coat.—Separate coats are much favored just now, owing to the popularity of the one-piece frock and the separate blouse and skirts. This low-belted design is extremely modish. If desired it may be fashioned of one of the brightly hued polo cloths now so much in vogue. The pockets on each side of the belt are useful as well as ornamental.

The packet 6347 is cut in sizes 14, 16 and 18 years. Medium size requires 3⅜ yards of 44-inch material. Price of pattern ten cents.

6336 Girls' Dress.—A delightfully plain dress is shown here. The blouse closes surplice fashion and is trimmed with scalloped edges and novelty buttons. Collar and cuffs are of contrasting material and the long Russian waist is confined with a soft pretty sash of striped silk.

The pattern 6336 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 2⅜ yards of 36-inch material, ½ yard of contrasting goods. Price of pattern ten cents.

5687 Girls' Doll Set.—This set of clothes will delight any little girl, as the outfit contains eleven pieces and consists of a double-breasted coat, jumper dress, guimpe-and-petticoat in one, combination underwaist and drawers, nightgown and cap.

The pattern 5687 is cut in sizes for dolls measuring from 14 to 26 inches long. To make the set for a 26-inch doll it will require 1 yard of 40-inch material for the coat, ⅞ yard of 27-inch goods for the dress, 1 yard of 27-inches for guimpe-and-petticoat, ¾ yard of 36-inch material for underwaist and drawers, 1¼ yards of 27-inch for nightgown and ½ yard of 20-inch for cap. Price of pattern ten cents.

4616 Boys' Dress.—Boys' styles are very much the same. This little dress pictured above is for the real small boy who has not yet been put into knickerbockers. All boys like pockets and one is inserted in the left side of the front. The pattern provides for a removable shield.

The pattern 4616 is cut in sizes 1, 2 and 3 years. Medium size requires 2¼ yards of 27-inch material. Price of pattern ten cents.

4625 Girls' Dress.—This model is made in the semi-princess style; that is, it has the unbroken princess panel down the center of the front. From each side of this the material turns backward in small plaits on the waist and the skirt is kilt plaited.

The pattern 4625 is cut in sizes 6, 8,

Big Doll For You

D-L-I-D-M-L-

Can you fill in the blank spaces above and complete the doll's name? You can do this if you try. THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Rural Route, No. 56, Box 21, Philo, Illinois.

JIMMIE'S GRASSHOPPER PARTY.

(First Prize.)

Jimmie Grasshopper talked all summer about having a party. In the autumn, his mother said that, that now he might send invitations for the party. The invitations were something wholly new; Jimmie called the butterfly to him and told him to tell all the bugs in the fields and woods.

The party was held in a nice, green spot in the woods. Miss Cricket came first, because she said her dress was so thin that she could not stay late. However, Mr. Firefly said he would take her home, because he could light the way with his lantern.

Little Miss Cricket sang a song, but Mr. Longlegs said her voice was too coarse. Then they played "Ring Around the Rosy," and "Hide and Go Seek."

For supper they had nice green lettuce leaves, and many other good things. Mr. Glowworm got drunk on blueberry wine, and some of the bugs had to carry him home.

All said that they had a good time, so they said goodbye to Jimmie, and then went home.

—Emma Fisher.

Radium.

(Second Prize.)

Radium is a metal. It was discovered by Professor Currie and his wife, in 1898. Radium is difficult to find in its pure state. It will continue to give out light and heat without loss of bulk or energy. The rays of radium reduce silver salts, transform white into red phosphorus, color glass and paper and cause a sensation of light when brought near to the eyes. The rays of radium will cause burns if placed near the skin; not at once, but after a considerable time. Radium is very expensive. Professor Currie and his wife were from France.

—Freckles.

Our Government.

(Third Prize.)

How many of us ever think what our government does for us? It provides free edpcation for every boy and girl, employs inspectors of milk, meat and other foods in order to safeguard our health. It also paves and lights the streets for our pleasure, carries on affairs concerning the mail, money, commerce, punishment of crime, building of roads and bridges, care of the poor, provision of water supply, and most important of all, protects our life and property.

—E. M. G., age 14.

THE NATIONAL APPLE DAY.

Let everybody know that Tuesday, November 18th, is the national apple day. This day has been set apart by the various great organizations interested in apple growing and apple selling as the one apple festival. In some apple-growing sections several days or a whole week will be given to the festival, but in other places one day will be considered sufficient.

It is asked and expected that upon this day every man, woman and child in the United States will eat at least one apple. Presumably very patriotic people will make the apple the leading feature of the day's rations.

In a large measure the health and prosperity of our nation are bound up in the apple. It has been called the national health food, and as good an authority as Dr. Wiley has said that the eating of apples is the best possible method of preserving health.

The apple has also been called the sure cure or at least the prevention of intemperance in the use of strong drink.

Because the culture of this fruit has reached, in the United States, a high state of perfection and because we grow it upon a larger scale than any other nation, it is especially fitting that this country should have an annual apple festival.

There are a multitude of ways and forms in which the apple appears upon the American dinner table. No less than 200 methods of serving it has been listed. And this does not include cider—soft or hard—which is the form most acceptable to some.

To appreciate the importance of this crop imagine a total failure for one year and only suppose we were deprived of the 40,000,000 barrels annually produced. Why, the result would be a calamity felt by every man, woman and child in the nation.

The apple is one of the basic props of our prosperity and our whole fabric of society and civilization is built upon prosperity.

Show your appreciation of the orchardist's work by eating apples November 18th. Let your deeds in apple consumption be your offering of thanksgiving for such a marvelous gift as the American apple is to the human race.

The University of Illinois is to build a farmers' convention hall that will seat eight thousand people on the main floor and three thousand more in the galleries. The building will be used, also, for an exposition hall for fine stock shows and agricultural produce of various kinds connected with the college of agriculture and the experiment station. It will have various other uses, but it is of particular interest to note the plans that have been made for using it for farmers' gatherings, farmers' short courses, etc. It will be the biggest structure of its kind in the country and exemplifies the policy of the university faculty in regard to the farming industry of the state.

Vegetables of a leafy nature, such as cabbage, lettuce and spinach, are greatly benefited by the application of lime. In order to grow profitable crops of lettuce and spinach it is necessary to fertilize liberally.

Deafness

From All Causes, Head Noises and Other Ear Troubles Easily and Permanently Relieved!

Thousands who were formerly deaf, now hear distinctly every sound—even whispers do not escape them. Their life of loneliness has ended and all is now joy and sunshine. The impaired or lacking portions of their ear drums have been reinforced by simple little devices, scientifically constructed for that special purpose.

Wilson Common-Sense Ear Drums often called "Little Wireless Phones for the Ears" are restoring perfect hearing in every condition of deafness or defective hearing from causes such as Catarrhal Deafness, Relaxed or Sunken Drums, Thickened Drums, Roaring and Hissing Sounds, Perforated, Wholly or Partially Destroyed Drums, Discharge from Ears, etc. No matter what the case or how long standing it is, testimonials received show marvelous results. Common-Sense Drums strengthen the nerves of the ears and concentrate the sound waves on one point of the natural drums, thus successfully restoring perfect hearing where medical skill even fails to help. They are made of a soft, sensitized material, comfortable and safe to wear. They are easily adjusted by the wearer and out of sight when worn.

Drum in Position

What has done so much for thousands of others will help you. Don't delay. Write today for our FREE 168 page Book on Deafness—giving you full particulars.

BIG HOME COMBINATION

FOUR PAPERS FOR THE PRICE OF ONE

I have closed one of the best subscription arrangements ever made by a publisher of a farm paper.

If you will mail your order during the month of November I will send you The Homestead three years, Home Life, McCall's and Today's magazines each one year for the regular subscription price of The Homestead alone. Read about these four papers.

The Homestead

The leading live stock and farm journal of the West. Its editorial advice and the experience of its large corps of contributors are written with the especial purpose of adaptation to the needs of the readers. It takes up in detail every feature of live stock raising, general farming, dairying, poultry growing, etc.

Regular price, $1.50 for three years.

Today's

Today's Magazine is a monthly and contains from 32 to 44 pages. Large, complete woman's magazine. Full of the choicest kind of literature relating to history, travel, science, invention, art, drama, education, religion, music, fashions, needlework, hair dressing, home dressmaking, health, hygiene, cooking, etc. Also short stories and serial stories.

Regular price, 50 cents per year.

Home Life

Filled with human interest articles on health, hygiene, character, religion, education, and the preservation of the home. It tells how to beautify the home and make it attractive. It contains several pages of short stories and several noted serials during the year.

Regular price, 25 cents per year.

McCall's

McCall's Magazine contains from 80 to 124 pages each month and is one of the greatest Woman's Fashion Journals in America. It contains special articles on dressmaking, millinery, fancy work, home decorations and household management. It illustrates 50 to 60 fashion designs every month, some in colors, besides containing numerous other attractive features which make this a favorite magazine in over one million homes.

Regular price, 50 cents a year.

THIS IS MY OFFER

Send me only $1.50 for three full years' subscription to The Homestead and I will send you, without additional charge, McCall's, Today's and Home Life, each one for a full year. Remember, the offer is good only till December 1, 1913. We cannot supply you with the combination after that date. Wrap a fifty-cent piece in a one-dollar bill, attach it to the coupon below and mail it to me at once, at my risk. Do this now, before you forget it.

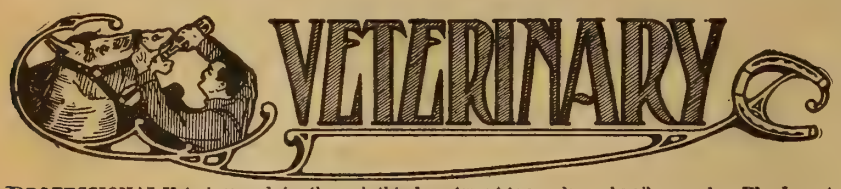
(This coupon is not good a... December 1, 1913.)



PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. Thoroughly good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case. All veterinary inquiries should be addressed to this office.

SYMPTOMS AND TREATMENT.

CROOKED FOAL.

I have a mule colt four months old that is becoming crippled. It now stands on its toes in front and will not set its foot down flat. Apparently it is healthy. Have had two others that started like this and they become permanently crippled.

The tendons are thickened and shortened, but there is good hope of recovery if you hand rub the tendons and joints thoroughly three times a day and each time force the feet flat down upon the ground; then put on ankle boots and braces or splints and bandages to keep the fetlocks in their proper position. Possibly you may be able to interest your blacksmith or harnessmaker to devise suitable braces or boots.

ABORTION.

I have a full-blooded Jersey cow that raised me a nice calf last year, but now she will get with calf and then lose it in two and one-half or three months. Is there any remedy for this?

No specific remedy has been found for contagious abortion, but you should give the new treatment, recommended by the Vermont station, which is to give half an ounce of pure medicinal methylene blue in a gelatine capsule night and morning with a balling gun, and after four weeks interval the treatment should be repeated for another seven days and continued at four-week intervals throughout pregnancy. Start the treatment early in pregnancy. This treatment has given wonderfully good results to date and will be largely tried throughout the country until its efficiency is fully tried, one way or the other. The approximate cost of the methylene blue (medicinal) is $2.50 per pound. The daily dosage costs therefore about ten cents or seventy cents per week, per cow.

SORES.

Have a large herd of hogs of all ages that have been raised on alfalfa meadows and fed but little grain, kept in good condition. In the last twenty days all of the younger ones have broke out around the eyes and ears and some about the stomach with a coarse pimple which in some cases assumes the appearance of a large wart. About the eyes it becomes raw and makes it impossible for them to hunt food. On further examination I find that the eruptions are more nearly like boils. They do not seem to be sick and all have a good appetite.

Scratches or sores become invaded by the bacillus necrophorus, a filth germ, causing canker sores. This bacillus is also the cause of lip and leg ulceration so common in sheep in the western states. Change the pigs into clean pens and yards; away from possible causes of scratches, such as cactus, needle grass, foxtail grass, or anything of that sort and out of manure and filth. Scrub and scrape each sore clean; then lightly rub it with a lunar caustic pencil and afterward swab twice daily with a 2 per cent solution of permanganate of potash. Paint boils or lumps daily with tincture of iodine, then open when they become sof evacuate pus or other fluids and use tincture of iodine daily until they have healed. Isolate affected pigs.

TUBERCULOSIS.

I own a herd of Jersey cattle and I think one of them is affected with tuberculosis. What are the symptoms and what shall I do with her if she is affected?

To determine the presence of tuberculosis it is absolutely necessary to employ a graduate veterinarian to apply the tuberculin and if the disease is found present he will instruct you as to the disposal of the animal. Physical symptoms of tuberculosis often are practically absent; but in many cases the disease is indicated by cough, emaciation, weakness and hidebound coat.

SORES.

I have a 700-pound steer that has sores on his hind feet in the center of the foot just above the hoof. They seem to be circular and of a spongy appearance, foul smelling. He is not lame, but is very touchy about the sores. Have put on some powdered blue vitriol.

Keep the animal up. Cleanse the parts and then saturate the sores with a solution of half an ounce of sulphate of copper to a pint of water used as hot as the hand will bear; then cover the sores with a mixture of equal parts of calomel, subnitrate of bismuth and boric acid, cotton batting and bandages. Renew the latter dressing daily and if necessary use the copper solution at intervals of three days.

VENTILATION FOR ANIMALS.

The amount of pure air which must be breathed by different animals during twenty-four hours, in order to supply the oxygen needed, computed from Colin's table, is given below:

Horse breathes 272 pounds, 3,401 cubic feet of air.

Cow breathes 224 pounds, 2,804 cubic feet of air.

Pig breathes eighty-nine pounds, 1,103 cubic feet of air.

Sheep breathes fifty-eight pounds, 726 cubic feet of air.

Man breathes thirty-four pounds, 425 cubic feet of air.

Hen breathes two pounds, twenty-nine cubic feet of air.

These facts clearly show the necessity of proper ventilation if an animal is to do economical labor, take on flesh or give the best results in other products.

Grazing or silage is always economical, as this is nature's way of restoring an overworked stomach and reviving the appetite to normal. In winter, with nothing but dry feeds, it is a very difficult matter to keep the animals upon high production without an occasional failure of milk. But with silage it is much easier and feeding is greatly simplified.—[Farm and Ranch.

The illustration shown herewith is that of Chief Select 2d, owned by Wm. Moderow, Beemer, Neb. See field note on page 31

THE BEST FOR HOGS

LEE'S HOG REMEDY

The Government formula, with additions by us.

GEO. H. LEE CO., Omaha, Neb.

Easy For The Boy

A Money Maker for the Man

The hoisting gear has a power of 40 to 1—twice as much as others; easily, quickly and safely raised and lowered, and stands at any point; no hit and miss ratchet to bother and let the box drop and smash; no dangerous crank to fly back and cripple the boy: runs easily on sharp curves or switches, in either direction, to right or left—these are a few of the important advantages of

The Louden Litter Carrier

which changes hard, disagreeable work for a man into easy pleasant work for a boy—and keeps the barn clean and sanitary so the cows will give more milk and bring more money.

Has box of heavy galvanized iron, reinforced by angles and soldered watertight. All the latest up-to-date improvements which inventive ingenuity and long experience can devise. Will save its cost many times a year.

We also manufacture a full line of Hay Tools, Bird Proof Barn Door Hangers, Feed Carriers, Stalls, Stanchions, etc. Catalogs mailed free. If you are going to build or remodel a barn our Special Architectural Department will send you, free, valuable information and plans which will save you money and worry.

LOUDEN MACHINERY CO., - - - 197 Broadway, Fairfield, Iowa.

SAVE-THE-HORSE
(Trade Mark Registered.)

THE LAME HORSE is never cured whose owner reads and doubts,—BUT FAILS TO ACT—Here is a case in Point,—And what Happened to this Subscriber is Taking Place with Thousands.

Letter No. 1 Orleans, Vermont, April 26th, 1912.
Troy Chemical Co., Binghamton, N. Y.—Your adv. has given me courage to try again. I have a valuable pacer. Two years ago he went lame. I tried every remedy and Doctors have blistered three times for spavin and twice hip. The symptoms are—etc., etc. I determined to see what you think. HALE MASON.

Letter No. 2
Orleans, Vt., May 2nd, 1912.—I received your letter and book yesterday and believe you are right about its being a bone spavin. I was so encouraged I drove eight miles and bought a bottle of Fred D. Pierce, druggist at Barton, and will closely follow your special instructions. Thanking you for your quick reply to my first letter, I remain, HALE MASON.

Letter No. 3
Orleans, Vt., Oct. 2, 1912.—Perhaps you expected to hear from me before, but I have been waiting to see if any trouble would return after stopping the treatment. I am pleased to say the horse is well. I cannot thank you enough for your interest and the advice you gave. If I had known about it two years ago it would have saved me a lot of money. Yours respectfully, HALE MASON.

Save-The-Horse has stood alone and unique among veterinary remedies for over seventeen years.

Every bottle of Save-the-Horse is sold with an iron-clad contract that has $60,000 paid-up capital back of it, guaranteeing to permanently cure or refund the money; no matter whether it is Bone or Bog Spavin, Tendon disease or Puffs—nor how aged, serious or complicated the lameness or blemish may be.

But write, describing your case, and we will send our—BOOK—sample contract, letters from Breeders and business men the world over, on every kind of case, and advice—all free (to horse owners and managers).

Write! AND STOP THE LOSS.

Hog Cholera

Can be prevented and stoped. Recent tests have proven the efficiency of a treatment which immunes well hogs, and saves sick hogs. Death to hog worms. Any one can use it. $5 case treats 40 hogs. Book and particulars free. Agents wanted. DR. D. C. SNODDY CO., Dept. O, Nashville, Tenn

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep, to this office.

GOOD QUARTERS FOR SHEEP.

To the Editor of The Homestead:

I have found from years of experience in the sheep raising business that it pays, and pays big to provide good safe quarters for the ewes when they are dropping their lambs, and cannot take care of themselves. I want to call your readers' attention to an incident that came under my observation when I was with a farmer only a few miles away from me, and was looking at his flock of sheep. I saw that he had some sheep of good blood, and they seemed to be in very good condition, and I was talking with him and asked him if he was making good money out of them if he could keep them from dying as they did. He said that half or more of his lamb crop died every year.

I thought that there surely must be some cause for his sheep dying that could be remedied, so I asked the cause and he said that he could not tell why, but his lambs were very hard to raise, that he did not have many old sheep to die, but his lambs were always giving him trouble. So I thought I would see if I could find the reasons for his lambs dying.

I asked the brother farmer where he kept his ewes when the lambs were small, and he took me to an old house that had in time been a dwelling house, and he is now using it for a house to keep his ewes and young lambs in.

On entering the house I was surprised to find things arranged as they were. I found loose planks of all kinds lying all over the floor, and boxes of all sizes, and pieces of boxes, also loose wire, barrels, jugs, and I am not sure what else as I could hardly tell what was not there for it was not easy to get inside to see. However, I got in enough to see that it was a shame to keep them in such a place.

This man just put his ewes and young lambs in that old house and thought they ought to just live anyhow. The house was a large square house and had it to be cleaned out and divided into small stalls so the lambs could have been with their own mothers they might have done well, as the roof was very good. Shame on such a farmer; he could not tell which lambs belonged to certain ewes, and you know that some ewes don't like for other than their own lambs to bother them especially when they are crowded.

He just put them in there any way, and of course young lambs are very tender and they would become entangled and get hurt or perhaps something turned over and hurt them, and, of course, enough of such abuse would put them out of business.

Some of them (surprising as it may seem) would make it through and not get hurt, and as he had good blood they would make very good sheep, but he was not making anything as he could have, and should have been.

I thought that right there was a mighty fine time to drop a few hints; thought they might stimulate him a bit to better things, so I advised him to clean out that house and build him some rather small pens for the ewes with lambs till they become well acquainted with their own mothers when turned out with the whole flock and he would not lose so many lambs and that the next time when I was there he would have a new song to sing about the sheep business.

He said that he had always been used to this house and had never thought much about what I had told him, but he would clean it out and see if he could do any better, as he certainly was losing money under the present way.

Of course, all men do not do this way, nor do I mean to say that they do, but there may be others that could profit by this, and what I want to impress is the importance of having things cleaned up in good shape so that they cannot get hurt in this way.

I have learned that the young lambs cannot be too well cared for if you are in the business for profit, and if I was not in it for profit I would quit the business before night; but when those early lambs go on the market, they leave a check behind that makes the good wife smile, and when the "wolf" comes around our way it is no trouble for the wife to give him a scare and we are then rid of him.

I have learned to look to the lamb crop as one of my best sources of incomes, and I know that where they are rightly handled they will prove thus to you.

No, I don't think you can get rich out of a small bunch in a short time, or at least I have not, but I have reference to making a few good honest dollars, to get grub for the kids and wife. You know how it is in the spring when the new styles all come around. No, we don't try to keep up with all of them, by any means, but it calls for some money just the same, and my! how the early lambs help out.

Subscriber.

REGISTERED Shropshire lambs and ewes of the best breeding and quality. Willard Miller, R-3 Anita, Iowa.

In and Around Wisconsin

ONE hundred and one head of cattle were recently sold at public auction in Woodstock, Illinois, by the Holstein-Friesian Association, bringing a total of $20,000. John F. DeYarmond, a dairyman in the town of Riley, paid $450 to T. E. Getzelman, of Hampshire, Kane county, for "Segis Plum," an especially well-bred Holstein. Two other sales reached $400 and there were seven between $300 and $400. Breeders from several states attended the sale. The McHenry county Holstein-Friesian Association was organized in 1910, its object being to promote the raising of pure-bred cattle.

The old Warren farm on the east shore of Powers Lake, Walworth county, formerly considered one of the finest in the middle West, but which has deteriorated in value and appearance through neglect, has been sold to William Randolph Hearst, the millionaire newspaper owner, of New York and Chicago. Mr. Hearst will spend large sums of money in equipping it for a summer home.

Wausau may be a rival of La Crosse for the location of the first co-operative packing plant to be erected in Wisconsin by the American Society of Equity. The Wausau Advancement Association, which has made proposals to State Organizer J. H. Carnahan, of Black River Falls, was told that its plans would be given due consideration.

Marinette County Potato Growers will hold their third annual institute in Wausaukee on Wednesday, November 12th. On that day the "potato special" will reach that city. Premiums will be offered for the best exhibits of potatoes and the growers of the county are invited to send exhibits of a half-bushel each of their best stock. The premium list will also cover other crops, such as corn, rutabagas, cabbage, onions, grains and fruits.

Drainage Commissioners J. Kamper, John Moyle and A. R. Hulbert have been ordered by Circuit Judge Belden to immediately start work on the Norway-Dover drainage canal in Racine county, according to a recent decision rendered by him. The commissioners were upheld on nearly every point against the remonstrators who brought the matter into court, and the remonstrants must pay the cost of the hearings. Thirty-two of the 300 landowners interested entered remonstrances, mostly to the effect that the individual assessments would be too high. Judge Belden holds that the cost will not exceed the benefits. The estimated cost of the drainage project is $80,000.

A. C. Holden, of Glen Flora, Wisconsin, had about five acres of potatoes this year which yielded him 1,300 bushels. After putting away 140 bushels for his own use, he has sold two carloads, one at 45 cents and the other, which goes directly to Missouri, at 60 cents. After deducting all expenses the two cars will average him 50 cents per bushel or about $550. Mr. Holden will receive an income of $110 per acre besides having plenty of potatoes for his own use.

A year ago hunters who ventured out on Turtle Creek marsh north of Delavan found it necessary to wear hip boots to keep dry and even these were sometimes inadequate for protection. To-day one can walk all over the nearly five square miles comprising the marsh in ordinary shoes, and not get wet. Ditches two, three, and even five feet deep, dug by early settlers now have no water in them. This remarkable result has been obtained from a comprehensive drainage system. The main ditches are twenty-six to thirty feet wide and eight feet deep. The main ditch from Turtle Lake to Delavan is about seven miles long and four laterals aggregating twelve miles in length, empty into it. Some 3,200 acres of valuable land have been reclaimed and a large part of it can be broken up and placed in a state of cultivation.

Seventeen cars of apples were billed from Twin Bluffs station, Richland county, this year. Each of the cars contained about 250 barrels.

E. T. Bartholomew, of the Wisconsin College of Agriculture, has discovered that the mysterious "black heart" in potatoes is caused by overheating; storage in a temperature of 100 to 104 degrees Fahrenheit for eighteen to twenty-four hours. Experiments were conducted with twelve varieties of potatoes before this conclusion was arrived at.

The timber harvest in the southern and eastern parts of Sawyer county will be heavier this season than in many years. All the lumber companies have opened up their old camps and started to erect new ones. Approximately seventy-five camps will be operated and between 5,000 and 6,000 men will be employed during the logging season. The total cut will be near the 20,000,000 mark. About 60 per cent of the timber logged is hemlock and the rest hardwood and pine. A great quantity of ties, cedar posts and poles will also be cut.

Grant county is steadily growing into prominence as a dairy country, the value of the annual product of its creameries and cheese factories having reached about $1,500. Fennimore ranks first in the amount of butter produced, Lancaster second and Boscobel third.

The new hog barn of the Wisconsin College of Agriculture will be completed and ready for use not later than December first. It will cost approximately $4,000 and have room for fifty or sixty hogs to be used principally for breeding purposes.

Superintendent Babcock, of the Turtle Lake pea-canning factory, has warned farmers that if the acreage planted to peas is not increased from 300 acres to more than 700 acres next year the factory will be moved.

PREVENTING GROWTH OF HORNS ON YOUNG CALVES.

To the Editor of The Homestead:

To those who dislike dehorning the method of preventing horns from growing on the young calves should appeal very strongly. There are many farmers who dislike cattle with horns, but because of their abhorrence of the supposedly cruel performance of dehorning they will not have the horns removed. Here is a plan by which they can prevent the growth of the horn with practically no pain to the calf.

When the calf is four days old the young horn should be treated with caustic soda or caustic potash. Either of these may be secured at the drug store in sticks about the size of an ordinary lead pencil and five inches long. These must be handled with care so they do not come in contact with the flesh as they will dissolve the cuticle and make a sore place.

The hair should be clipped from the calf's head by means of sharp shears up close around the horn buttons. These places should be thoroughly cleaned with warm soap and water and wiped thoroughly dry. The piece of caustic should be handled with gloves or wrapped in a heavy piece of paper, leaving one end of the stick exposed. Now moisten the exposed end of the stick and rub it on the horn buttons. Rub it over each button alternately two or three times and allow the caustic to dry. Be certain that the caustic is applied only to the buttons. Do not allow the moistened caustic to run down on the calf's skin or it will burn into his flesh. After treatment keep the calf out of the rains, for the rain will melt the caustic on the horn buttons and cause it to run over the calf's face.

Subscriber.

It is easy enough to become addicted to the habit of buying in small quantities. I am always surprised when in a store for any length of time to see how many well-to-do people buy such things as soap and matches in five and ten-cent quantities. One gains a box by buying matches by the quarter's worth and a still greater per cent by buying soap in the 100-bar box.

This is a poor time of the year to let cattle shrink. Letting an animal start to run down in condition now means more feed later to maintain weight and condition. Good shelter also saves much feed. It is an absolute certainty that when an animal is made warm and comfortable with good shelter the feed required to maintain the animal heat is not nearly so great.

DATES FOR LIVESTOCK SALES.

Poland China Swine.

Jan. 23, Thos. F. Miller, York, Neb.
Jan. 23, E. E. Farver, Ocheyedan, Iowa.
Jan. 24, Beall & Jackson, Roca, Neb.

FIELD MEN.

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota and swine division in Illinois. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

J. C. Price, southern and western Nebraska. Address 145 So. 38th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

H. S. Hoard, Wisconsin. Address Room 401 Washington Building, Madison, Wis.

FIELD NOTES.

August Hager, Avoca, Iowa, offers some good boars for sale on page 39.

Silas Igo, Indianola, Iowa, has a few very choice Duroc Jersey boars for sale.

Chester White boars are advertised for sale by Wm. Stoll, LeMars, Iowa, on page 38.

C. F. Sealock, Neola, Iowa, offers immune Chester White boars for sale on page 38.

W. T. McLaughlin, Manson, Iowa, offers Poland China boars for sale on page 36.

Immune Chester White boars are offered for sale by Earl Bloom, Bridgewater, Iowa.

S. J. Philson, Harlan, Iowa, is offering some good Chester White boars for sale on page 38.

Geo. C. Everts, Audubon, Iowa, is offering a splendid line of immune Duroc Jersey boars for sale.

Cholera-immune Berkshire boars are advertised for sale by Fred Divelbess, Logan, Iowa, on page 38.

L. C. Reese, Prescott, Iowa, offers choice and well-bred Chester White boars for sale on page 38.

C. M. Russell, Carroll, Iowa, is advertising some splendid Aberdeen Angus bulls for sale on page 34.

Forty-five immune Poland China boars are advertised for sale by C. H. Porter, Eagle Grove, Iowa, on page 36.

Fox Terrier dogs are advertised for sale by E. B. Bohlwing, Greene, Iowa, in his advertisement on page 16 of this issue.

Fall and spring Chester White boars all cholera proof and immune, are advertised for sale by John F. Holst Jr., Denison, Iowa, on page 38.

A. L. Freeman, Oakes, N. D., has forty-five head of steers weighing 1,050 pounds each, which he is offering for sale on page 32 of this issue.

Write J. S. Snethen, Davis City, Iowa, if in the market for a good Duroc boar or some gilts. His are bred right and will make good. See page 38.

High-grade Holstein cows and heifers are for sale by W. C. Kenyon & Sons, Elgin, Ill., who can supply you one or a car load. See page 18.

J. L. Barber, Harlan, Iowa, one of the best known Chester White breeders in the state is offering some corking good immune boars for sale on page 38.

Twenty-five good Duroc boars are advertised for sale by E. A. Calkins, Ruthven, Iowa, on page 39. He is offering a very choicely-bred lot of boars.

S. P. Freed, Ames, Iowa, breeder of Duroc Jersey hogs, has for sale a few spring boars by the champion Freed's Colonel, which he will dispose of at reasonable prices.

U. G. Davidson, Algona, Iowa, is offering a few good Crimson Wonder boars for sale. Write him about these at once. His advertisement appears on page 38.

John C. Nyrup, Harlan, Iowa, offers some splendid Poland China boars for sale at $25 each. Send him an order for one of these boars at once and he will send you a good one. Se page 36.

Martin Nelson, Cambridge, Iowa, has an excellent herd of Aberdeen Angus cattle and one which is rapidly assuming proportions which must soon demand the attention of those who purchase breeding animals.

J. W. Fisher, Grinnell, Iowa, advertises Chester White boars and gilts of February and March farrow for sale. They are sired by Dock 22313, he by Model Boy by Modeler. The advertisement appears on page 32.

John C. Miller, Harlan, Iowa, one of the oldest and most noted Berkshire breeders in the state offers some good boars for sale on page 38. He has both fall and spring boars. Send him an order at once if you want Berkshires.

Sorghum syrup made by the Ft. Scott Sorghum Syrup Company is advertised on page 24. Particular pains is taken in the manufacture of this syrup and in its preparation for market to insure a pure and refined product. It is suitable for all household purposes. Grocers generally have it for sale. Send 5 cents for a sample can of Farmer Jones Syrup and recipe book that is valuable to every house keeper. Address Ft. Scott Sorghum Syrup Co., Ft. Scott, Kan.

If you want an immune Chester White boar, write C. F. Sealock, Neola, Iowa. His advertisement appears on page 38.

Dan Jacobsen, Gilbert, Iowa, breeder of Poland China hogs, will hold a public sale of brood sows on the 4th of February.

A. D. Freed, Kelley, Iowa, claims November 18th as the date of a public sale of Duroc Jersey brood sows. Later announcements in this paper will give details.

H. L. Faulkner, Jamesport, Mo., the man who put the spotted Poland China hogs back on the map can furnish breeding stock of most any desired age. See advertisement on page 37.

Trappers need the free trappers' book advertised on page 11. It tells how to catch fur-bearing animals, how to dress their pelts and gives other information of interest and value to trappers. It is free. Write for it to I. Abraham, 213 N. Main St., Dept. 136, St. Louis, Mo.

The advertisement of Willard, Son & Co., on page 25 advises our readers that the firm in question is prepared to do tanning of all sorts promptly and in a satisfactory manner. For catalog or prices on tanning and the making of coats and robes, address Willard, Son & Co., Marshalltown, Iowa.

J. A. Sage, Ankeny, Iowa, announces a public sale of twenty-two head of Shire horses to take place at his farm near Ankeny on the 9th of December. There will be one imported mare in the bunch. All others are American-bred and all recorded. Additional information will appear in a later issue of this paper.

Des Moines Tanning Company invites the shipment of horse or cow hides and offers them up into good, soft, pliable coats, robes and rugs. The articles which they make are proof against moths and water proof as well. A free book tells all about it. Address Des Moines Tanning Co., Dept. A, Des Moines, Iowa. See page 11.

Detroit kerosene engines are advertised on page 9. The Detroit boasts of simplicity and power peculiar to itself. It runs cheaply and furnishes reliable power. In order to introduce it into new territory special prices are offered to the first buyer. For these special figures and additional information write to Detroit Engine Works, 74 Canton Ave., Detroit, Mich.

On the 3d of February, C. A. Rosenfeld, Kelley, Iowa, will hold his annual sale of Poland China sows. Mr. Rosenfeld's last winter sale was a remarkably successful one and the class of animals reserved for the coming sale have equal merit. The herd has been immuned by the simultaneous process and are otherwise in perfect health and thrift.

5-A horse blankets have, after years of practical use, become the accepted standard for horse clothing. They are strong and heavy, warm and made to fit. These blankets are advertised on page 26. They are sold at very low prices. A booklet showing blankets in colors and giving full descriptions may be obtained by writing to Wm. Ayres & Sons, Philadelphia, Pa.

The illustration of the Humane Check Rein on page 20 shows one of the most perfect devices for horsemen that has ever been invented. It prevents the breaking of overchecks, prevents sore mouths and keeps the animal in the natural condition which insures best service. It is sent anywhere postpaid for $1.00. Send orders to Humane Check Rein Company, Box I-A, Welch, Okla.

In the last issue of this paper, a field note concerning the Poland China herd of M. G. Arnold & Son stated that spring boars were offered at from $20 to $25 per head. This was an error as, although the pigs are being sold at unusually low prices, we should have said from $20 to $35 each. Our readers will note this correction. Address inquiries to M. G. Arnold & Son, Strawberry Point, Iowa.

Ring Bros., Newton, Iowa, are offering for sale cholera immune Poland China boars that have plenty of bone, length and quality and are well marked. They are largely of March farrow and weigh from 175 to 225 pounds in nice breeding condition. These gentlemen guarantee satisfaction and are pricing the boars at from $20 to $30 each. See page 32 and when writing kindly mention The Homestead.

Iowana Farm Berkshires are bred along champion lines, being sired by champion boars, are the strong, growthy, prolific kind, and every one has received the simultaneous treatment for immunization against cholera. Buyers have a large number from which to make selections, and can secure boars and gilts not akin. The advertisement appears on page 38 and any desired particulars can be secured by addressing the manager, J. L. Thatcher, Davenport, Iowa.

In his advertisement on page 32, W. B. Seeley informs our readers that he has for sale five choice Aberdeen Angus bulls that are about one year old. These are good ones, as might well be expected from the Seeley herd. Mr. Seeley began breeding Aberdeen Angus cattle in 1895 and since that time he has had a number of noted prize-winners in his herd. One of these was Second Mayor of Estill, a stall companion to the noted Gay Lad. Another was Black Knight of Estill 9th, an animal which when thirteen months old cost $2,000. Black Bird Ito, still another, was the junior champion bull of the World's Fair in St. Louis. At the same time Mr. Seeley showed the wonderful champion cow, Vala, which he was unfortunate enough to lose in shipment shortly afterwards. The herd carries animals of such noted families as Queen Mothers, Ericas, Easter Tulloch Jeans, Prides, and Blackbirds. Write for prices and other information. Address W. B. Seeley, Mount Pleasant, Iowa.

Perry O. Brown, Lamoni, Iowa, is advertising some excellent Duroc Jersey boars sired by Belle's Choice Goods and out of some of the best sows that he owns. They are large, growthy fellows with plenty of bone and Mr. Brown is making attractive prices on them for the next few weeks. See page 39 and write him your wants mentioning The Homestead.

When the Brown fence can be put up at a cost of 13 cents per rod and of a material that performs all of the service required of any farm fence, it looks as if nothing else were required, as fence-building material. The Brown people pay freight. They mail a fence catalog and sample to those who mention this paper. Address Brown Fence & Wire Co., Dept. 34, Cleveland, Ohio. See advertisement on page 8.

Quaker City Feed Mills advertised on page 11 may be had on ten days' free trial at the risk of the seller. This is a liberal offer but after nearly half a century of experience the Quaker City people evidently know what they are about. They make twenty-three styles of grinders of all sizes and adapted to all work. For information as to free trial offer address The A. W. Straub Co., Department G, 3723 Filbert St., Philadelphia, Pa.

Hart Bros., Osceola, Iowa, recently arrived from France and Belgium with a splendid importation of Percheron and Belgian stallions that are hard to beat. Great big two year olds, some of which will weigh 1,900 pounds, good colors, with bone and plenty of quality. If you are interested it will pay you to see this importation at once. In writing them kindly mention this paper.

Farm Cushman engines of the four horse-power sort come as near filling all the requirements for farm power as any engine that has been produced. It was the original binder engine and the necessities covering its adaption to that purpose were available in making it suitable to other light and heavy farm work. New catalogs tell all about it. Address Cushman Motor Works 2029 N Street, Lincoln, Neb. See page 8.

The Sandwich Motor Presses advertised on page 13 have become a standard of perfection for hay-baling people. The engine and the baler are mounted on one truck, affording a complete outfit in a limited amount of space. Everything tends to increase its capacity and economy. A little book entitled "Tons Tell" gives the whole story. A postal card will bring it to you. Address Sandwich Mfg. Co., 170 A St., Sandwich, Ill.

L. I. Handlon, whose Shamrock herd of Chester White hogs is advertised on page 32, advises us that he still has for sale fall boars and spring pigs of both sexes. Mr. Handlon's herd has been built up from foundation material of the most popular and profitable sort and the animals which he sends out have always proven acceptable to his patrons. In addition to that, he quotes farmers' prices to those who will buy quickly. Address inquiries to L. J. Handlon, Route 3, Farmington, Iowa.

As a season for fence building the present leaves nothing to be desired and the only thing to be considered is the kind of fence to put up. This question may be solved if the fence builder investigates the merits of the Pittsburgh perfect fence, an illustration of which appears on page 15 of this paper. The Pittsburgh is welded by electricity which insures holding its form and lasting qualities to the very limit. Read the advertisement. Send for catalog and price list. Address Pittsburgh Steel Co., Pittsburgh, Pa.

Notwithstanding the fact that farmers have been buying automobiles with wonderful freedom, statistics present the astonishing information that more buggies than ever are being sold. This of course applies to high-class buggies such as a Kratzer, an announcement of which appears on page 8. Dealers everywhere sell the Kratzer. It is fitted with all the up-to-date appliances, with a wind shield that gives protection from winds and rains and is sold at a price within the reach of every buyer. For free catalog address Kratzer Carriage Co., 104 W. 1st St., Des Moines, Iowa.

Carl A. Rosenfeld, Kelley, Iowa, has recently placed at the head of his herd of Poland Chinas, the mature hog, Orange Jumbo. This animal is a son of the noted Big Orange and his dam was a big sow that had not only size but quality and popular blood lines to her credit. Orange Jumbo was exhibited at the late Sioux City Fair and was a very popular candidate for higher honors than the judge accorded him. He has been at the head of the Jensen herd at Newell, Iowa, and has been proven a breeder of extraordinary merit. In the herd of Mr. Rosenfeld he will no doubt make a new record.

In previous seasons the announcement of Mickle Fur Coat and Robe Co., have been prominent features in our advertisement columns. The initial advertisement of this season will be found on page 25. It is an interesting advertisement because it offers an opportunity for our readers to obtain caps, gloves or mittens free of cost. The Mickle Company tan all kinds of hides and make them up into coats or robes as may be desired. They do this in a strictly first-class manner, promptly and at very low prices, and in addition offer the free articles as above mentioned. For these special prices.

address Mickle Fur Coat & Robe Co., Mason City, Iowa.

J. E. Beckendorf, Walnut, Iowa, offers Hampshire boars for sale on page 35.

Fred Sexsmith, Orient, Iowa, advertises some good Poland China boars for sale.

A. W. Stewart, Harlan, Iowa, advertises Poland boars at $20 and $25 on page 37.

Berkshire boars are advertised for sale by H. L. Kemp, Harlan, Iowa, on page 38.

P. J. Sheridan, Vail, Iowa, offers good bargains in Chester White boars on page 38.

F. O. Peterson, Galva, Iowa, offers some splendid Hampshire boars for sale on page 35.

W. H. Barr & Son, Villisca, Iowa, advertises twenty head of immune Poland China boars for sale.

Immune Poland China boars are advertised for sale by C. M. Pederson, Dunlap, Iowa, on page 37.

P. W. Weberg, Denison, Iowa, is offering some great bargains in Duroc Jersey boars on page 39.

J. M. Sheehan, Stuart, Iowa, has twenty head of big-type Poland China boars for sale. Read his advertisement on page 37.

Chas. W. Crosier, breeder of O. I. C. hogs at Juniata, Neb., has an advertisement on page 32 which will interest those in search of strictly high-class spring pigs at reasonable prices.

James Lawler, Clare, Iowa, is offering some great bargains in Poland China boars on page 37. Just read his advertisement and write him. He certainly offers some splendid bargains.

A good two-year-old Percheron stallion and a yearling are offered for sale by H. D. Clore, Lucas, Iowa, on page 33. He will take $1,000 for the two and they are great bargains at that figure.

If you want a good Chester White boar don't fail to write W. H. Dunbar, Jefferson, Iowa. He has a lot of good ones and he is making special prices to close them out. His advertisement appears on page 38.

The Percherons and Belgians advertised on page 33 by V. W. Harms, Fairbury, Ill., are the weighty kind, with bone and quality and will be priced worth the money.

Galloway cattle, bulls and females, strong in the blood of McDougal 4th of Tarbreoch, are for sale by James P. Milliken, Media, Ill., whose advertisement appears on page 34.

Chas. Escher & Son, Botna, Iowa, are offering some great bargains in Aberdeen Angus cows and heifers on page 34. They also have a very choice lot of young bulls for sale. Write them at once and mention The Homestead.

Some extra good large-type Poland China boars are offered for sale by James Cockerton, Whiting, Iowa on page 37. He is pricing these where they will sell. Write him about them at once or go and see them yourself.

Stewart's immune Chester White boars—He has one of the best bunches of boars ever seen, and they are all immune. Order one of these right away and you will be sure to get a good one. His advertisement appears on page 38.

W. R. Adams, the raw fur man at Fremont, Nebraska, buys raw furs of all sorts and will send price list No. 53 to every reader of this paper who asks for it. Address W. R. Adams, Fremont, Neb. See advertisement on page 11.

In an advertisement on page 11 the Bayer Tanning Co., offers to tan a hide and make a good coat from it for only $12.50. Read the advertisement. For price list and other facts write to Bayer Training Co., 105 S. W. 9th St., Des Moines, Iowa.

Kimball organs are advertised on page 24 at factory prices. They are sold to farmers on a free, thirty-day trial offer at a saving of from $20 to $50 in price and on most reasonable terms. For new catalog write to W. W. Kimball Co., 3738 Kimball Hall, Chicago, Ill.

R. B. Burt, Coggon, Iowa, breeds Chester White hogs and has for sale an excellent lot of boars of spring farrow. These he is offering at unusually low prices, quality considered. The blood lines are right and the pigs are otherwise good enough to satisfy any buyer. See page 38.

Among the growing concerns employed in the production of devices leading to better farming the X-Ray Incubator Co. stands in a prominent position. Since the incubator has become a necessity on every farm the main question with reference to it has been the right one to buy. The X-Ray people began operations a few years since at an insignificant little town and with no other equipment than an ordinary carpenter shop. The excellent manner in which the X-Ray performed its work led to a thorough appreciation and a growth in the demand which at once forced the company manufacturing it to increase facilities for its production. Then the factory was moved to a larger town, but the progress of advancement has been such that still another move to a city better adapted to manufacturing and distributing purposes became a necessity. Lately the X-Ray factory has been moved to Des Moines, Iowa, and enlarged so that the X-Ray can be produced in sufficient numbers to supply the great demand. It is said of the X-Ray incubator that one gallon of oil will make a complete hatch. This will be recognized as a remarkable saving of oil and time as compared with other hatching devices. There are, however, many other important features which buyers should investigate. They may be learned by writing to X-Ray Incubator Co., Des Moines, Iowa.

Four good young Scotch bulls are advertised for sale by G. H. White, Emerson, Iowa, on page 35.

Hampshire boars and sows are advertised for sale by E. S. McCandless, Thurman, Iowa, on page 35.

M. P. Hancher, Rolfe, Iowa, is offering some great bargains in cholera immune Poland China boars on page 36.

Short-horn catalogs compiled and printed by Frank P. Healy, Bedford, Iowa. See advertisement on page 35.

Galloway cattle and Oxford Down sheep are advertised for sale by C. S. Hechtner, Charlton, Iowa, on page 34.

Thirty immune Poland China boars are advertised for sale by L. R. McClarnon, Braddyville, Iowa, on page 37.

Chester White boars, cholera proof and immune, are offered for sale by W. E. Gaffey, Storm Lake, Iowa on page 38.

Read the advertisement of H. S. Allen, Russell, Iowa, on page 39 if you are on the market for some right toppy Duroc boars.

Poland China boars and sows are advertised for sale by Henry Moll, Garner, Iowa, on page 36. He offers a good herd boar, a March yearling and some good spring boars and gilts. Read his advertisement on page 36 and write him about these at once.

John H. Fitch, Lake City, Mo., offers a choice lot of Poland China boars for sale at $25 to $40. These are strictly large type with quality combined, and they are good ones. Write him about these at once. His advertisement appears on page 36.

James Cockerton, Whiting, Iowa offers twenty good boars for sale on page 37. Mr. Cockerton is one of the best breeders in western Iowa and he always breeds them good. He is offering this crop at farmers' prices in order to close them out.

Farmers living on the lines of the Chicago Great Western Railway will be interested in the advertisement of that road which advertises permanent positions on page 21. The advertisement is something more than an advertisement, it is an argument in favor of obtaining such education as is available at the great international livestock exposition which takes place at Chicago from November 29th to December 6th. The Chicago Great Western offers excellent train service to and from Chicago on the occasion referred to. For information or rates address A. L. Craig, General Passenger Agent, Chicago, Ill.

The illustration of the Old Honesty blanket on page 10 shows the reasons for the popularity of that blanket. Other reasons are their extra wearing qualities and reasonable prices. Send orders or request for information to Bemis Blanket Co., Omaha, Neb.

W. J. Martin, Darlington, Wis., is advertising Chester White boars on page 32 of this paper. These are March and April pigs and will be sold at the low price of $20 each. They are in perfect health and from a farm that has had no case of disease in twenty-five years. Any additional information may be obtained by writing to H. J. Martin, Darlington, Wis.

J. P. Franklin, Grand Island, Neb., wishes to buy home-bred or imported Percheron or Belgian stallions or mares. They must be registered and sound and from two to five years old, and weigh 1,700 pounds or upwards. Readers of The Homestead who can supply Mr. Franklin with the animals desired should write him, giving full description and their lowest cash price.

Guarding against the introduction of contagious diseases by strengthening vitality and condition is the popular method of saving hogs. Perhaps the most important detail is ridding the animals of worms. For this purpose Sal-Vet, a medicated salt, has superior merits. It prevents the lowering of vitality which leaves hogs in a poor condition to resist disease. It is particularly serviceable at the time when new corn is being fed. It has a great many purposes which we cannot take space to describe. These, however, may be obtained if the reader will fill out the coupon in the advertisement on page 40 and forward it to S. R. Feil, president the S. R. Feil Co., Cleveland, Ohio.

American axes are advertised on page 12. The wood-choppers of Australia, South America, Northern Europe and Africa buy American axes in preference to others that cost only half as much. American axes won every one of the numerous big wood-chopping contests held in Australia. American axes are sold in every country in the world. They have cut through tariff walls everywhere, outselling cheaper home products in all foreign countries. The series of advertisements of this axe which appear in this paper tell a remarkable story. The various brands of American axes cannot fail to suit the demands. Dealers have them for sale. They are made by the Americanax & Tool Co., Glassport, Pa.

R. W. Halford, Manning, Iowa, is offering some splendid fall and spring Poland China boars for sale on page 37. These are sired by the 1,092-pound Long Jumbo, the great prize-winning boar, Mabel's Wonder, and the 1,000-pound Chief Price 2d. Go and see these boars at once.

Thirty-four head of good Hereford cattle, including three daughters of Masquerada, the noted breeding bull, Prince Star Grove and nine of his sons, will be sold at Steward, Ill., Monday December 8th, by W. E. Hemenway & Son. Particulars will appear later. Catalogs will be ready November 15th.

Fetzer's flexible roller does all the work that the old-fashioned roller does and still more than that. It prepares a perfect seed bed on every foot of ground. The manufacturers offer to guarantee that it will pay its way the first year. Send for descriptive catalog No. 117. Address Wm. Fetzer Co., Springfield, Ill. See advertisement on page 8.

There is, without doubt, no publication of any sort which approaches the weekly Youth's Companion as popular reading for old and young. It covers the entire range of fiction, advertising and entertainments. It presents the latest developments in current events and science. It is clean from every point of view and adapted to family reading. An advertisement appears on page 22. On receipt of $2.00 the publishers send the Youth's Companion for one year and up to January 1914, and in addition send a free copy of the Youth's Companion practical home calendar for 1914. Send orders to the Youth's Companion, Boston, Mass.

The advertisement of Cypress lumber which will be found on page 14 offers half a dozen reasons why the use of Cypress is advisable and economical in the construction of farm buildings. The application of cypress lumber to the improvements on the farm is wise. The manufacturers in order to promote the use of cypress in all available construction have prepared five new books dealing with silo making, barn building, farm needs and United States government report on cypress. Any or all of these books may be had free by filling out the coupon in the advertisement and forwarding it to Southern Cypress Mfrs.' Ass'n., Hibernia Bank Bldg., New Orleans, La.

When it comes to gasoline engines at bottom prices the offer of the Ottawa Mfg. Co., on page 13, is worthy of consideration. A one and one-half horsepower engine for $24.75 is surely an attractive offer. The factory sends out thirty-four other sizes shipped anywhere on trial. A forty-eight-page catalog may be obtained by writing to Ottawa Mfg. Co., 511 King St., Ottawa, Kan.

In the purchasing of hogs for breeding purposes, it is well to keep in mind the value of immunity from disease secured from the simultaneous vaccination. Animals carrying this protection are offered for sale by George T. White in his advertisement on page 32. Mr. White is offering spring boars for sale. A good many of these are the get of Jumbo Wonder, one of the best sons of the great pair, Crimson Wonder Again and H. A.'s Queen. On the side of the dam there are Ohio Chief and Golden Model strains. Mr. White's herd was given double treatment by government experts and are not proof against cholera, but right in every way. Write him for prices. Address George T. White, Dallas Center, Iowa.

J. C. Huckstep, Eolia, Pike county, Mo., has continuously improved his Fairview jack and jennet farm and the quality of his herd of mammoth bred jacks and jennets. The thiry years Mr. Huckstep has spent in breeding and handling mammoth jacks has been devoted to the building of the breed and his efforts have been directed toward the improvement of bone, feet and quality without sacrificing size. The visitor at the Fairview Farm is impressed with the class of stock he finds there and if he is looking for jacks or jennets standing from fourteen and one-half to sixteen hands high, perfectly marked and with heavy, flat bone, good heads and ears he will not be disappointed. Many of these are jacks bred at the farm, others are the very tops Mr. Huckstep has gathered from the smaller breeders in Missouri and Kentucky who breed the very highest class of stock. Each of these are jacks Mr. Huckstep has tried so that he can stand squarely behind them with the same guarantee as he places on every animal he sells. We recently inspected the stock Mr. Huckstep has for the trade this year and we are pleased to say to our readers that Mr. Huckstep has the very highest type of jacks and jennets for the trade. In all, sixty head to select from. They are priced right and by a man who values his word so highly that every animal must be as represented. He guarantees them to be so, and Mr. Huckstep is a gentleman whose guarantee is as good as can be had. Those who buy now will find his prices attractive. Note page 33 for Mr. Huckstep's advertisement and when writing him kindly mention this paper.

Every farmer realizes that absolute care will save many dollars every year. As means of insuring this accuracy Ropp's New Calculator stands in a class by itself and unequaled from any point of view. It tells all about measurements, interests, prices of grain, farm stock or wages. It tells how to learn the contents of silos, cisterns and granaries. It answers every question involving the use of figures that can come up in the business of any farm. The regular price of this book is 50 cents, but it can be obtained free by addressing a request to the Keystone Steel Wire Co., 510 Industrial St., Peoria, Ill. An advertisement of the Square Deal fence made by this company will be found on page 8.

Red Polled Bulls for Sale.

If you want a good young Red Polled bull, read the advertisement of Frank P. Clouss, Clare, Iowa, on page 35. He has some corking good ones and at prices that anyone can afford to buy. Write him about these at once.

Schug's Immune Boars.

Forty choice Poland China boars are advertised for sale by Robt. A. Schug, Coleridge, Iowa, on page 37. These are sired by the grand champion boar, King Mastiff, Great Columbus, Farmer's Goliath and Nebraska Model. He is making special prices on these in order to close them out within next thirty days.

L. A. Matern, Auctioneer.

We desire to call attention of Homestead readers to the card of L. A. Matern, Wesley, Iowa, who is one of the best livestock auctioneers in northern Iowa. He has a few open dates this winter and will be pleased to hear from those contemplating making sales. He is all right and his work will please, and he gets the money. Write him for dates. See page 36.

Zimmerman's Immune Boars.

Did you order one of those Pawnee Price boars from W. E. Zimmerman, Neola, Iowa? A boar sired by this great son of Smooth Price is the thing just now, and they are all cholera immune. Mr. Zimmerman has some good ones and he is making special prices to close them out within the next thirty days. When writing him mention The Homestead. See page 36.

Jumbo The Great Polands.

Orville O. Jones, York, Neb., is offering immune Poland China boars either sired by, or out of sows by the great boar, Jumbo The Great. This is one of the best half dozen in the state, and it is worth something to buy pigs of his breeding. Mr. Jones sure has the good ones to sell and farmers' prices will take them. Do not overlook this opportunity, but order without delay. See advertisement on page 37.

Saunders Wants Short-horns.

The breeder of Short-horns who has some good cattle that he would like to sell in a December sale should write to C. A. Saunders, Manilla, Iowa. He wants a few more cattle for this sale and he would like to hear from those who want to consign right away. If any of our readers have cattle that they would like to sell in this sale they should get in touch with Mr. Saunders at once.

Keep Offers Great Boars.

Those of our readers who are wanting a good large-type Poland China boar should lose no time in writing Wm. Keep, Atlantic, Iowa. He has the best lot of big-boned boars he has ever raised and he is making special prices on these in order to close them out. You can't go wrong if you send Wm. Keep an order. You will be satisfied with these boars as they are right in every way. Write him at once and mention The Homestead.

Schmieder's Poland China Boars.

On page 32 John Schmieder, Remsen, Iowa, offers thirty-five head of choice Poland China boars sired by his great boar, Blue Valley Chief and Pawnee Defender. This is the last chance breeders will ever have to get Blue Valley Chief boars as the old hog is dead. He was one of the greatest boars in northern Iowa, and a splendid breeder. He also offers three good fall boars for sale. These boars have all been vaccinated and are immune. You can't go wrong by ordering one of these boars as they are right in every way. We, therefore, say to you to get busy and order one of these at once. When writing him kindly mention The Homestead.

William Crownover's Imported Stallions and Mares.

William Crownover, proprietor of Paramount Stud Farm, Hudson, Iowa, has returned from Europe with a high-class lot of Belgian, Percheron and Shire stallions and mares and is now in position to supply critical judges with a stallion or mare of superior merit. Included in the imporation is an elegant two-year-old Shire filly that was a prize winner in England and will be shown at the International Stock Show in December by Mr. Crownover, who will exhibit two car loads of stallions and mares. Mr. Crownover imported a number of two-year-old Belgian and Percheron stallions that are by far the best lot of two-year-olds he has ever had on the farm and in fact it is very seldom you see as many good two year olds in one lot. They are heavy boned, rugged, drafty fellows that will get large enough to suit anyone. Mr. Crownover had the champion Belgian stallion at the Iowa State Fair

NEXT WEEK'S SALE PROGRAM

Monday, November 17	Holstein-Friesians, Iowa Holstein-Friesian Sale Co., Waterloo, Iowa.
Tuesday, November 18	Holstein-Friesians, Iowa Holstein-Friesian Sale Co., Waterloo, Iowa.
Wednesday, November 19	Short-horns, C. E. Gibbs, Klemme, Iowa.
Thursday, November 20	Short-horns, A. H. Metler, Weldon, Iowa.

this year and he will make a very strong show at the International. The stallions and mares which Mr. Crownover will show at Chicago are a very high-class lot and are a credit to his ability as a judge and breeder. If interested in something good write Mr. Crownover your wants kindly mentioning The Homestead. See page 34.

King Gano Boars For Sale.

Those of our readers who want a right good Duroc Jersey boar should write O. E. Osborn, Weston, Iowa. He has four corking good spring boars sired by King Gano his first-prize junior yearling boar at Des Moines this fall and he tells us that every one of these is a herd boar proposition. Write or phone him at once about these boars and kindly mention The Homestead.

Hereford Bulls For Sale.

Three Polled Hereford bulls and a couple of good horned bulls are offered for sale by Parmlee & Pierson, Villisca, Iowa. One of these is a son of Admiral C., another is sired by Polled King 3d, and a good young bull sired by Polled Major. These parties have these bulls for sale, and will make prices on them where they will sell. Write them at once or go and see them. When corresponding with them kindly mention The Homestead.

Miller's Short-horn Importation.

Short-horn breeders who are wanting good young Scotch bulls or heifers, should go at once and see R. O. Miller, Lucas, Iowa, and inspect his 1913 importation. These cattle are now on his farm and are offered for sale at private treaty. It is the best importation of Short-horns that has been brought from Canada in years. Get busy and go and see these cattle at once if you want to get a chance at the best. When you write Mr. Miller kindly mention The Homestead. See page 32.

Oldsen's Short-horn Sale.

C. A. Oldsen, Wall Lake, Iowa, will make a public sale of forty head of Short-horn cattle at his farm on December 10th and he will sell a splendid lot of cattle. There will be thirty-one head of cows and heifers and nine bulls. A number of these will be Scotch cattle of the very best strains and his offering individually speaking will be of a high order. Drop him a card and have him place your name on his mailing list for catalog. Kindly mention The Homestead when writing him.

Richardson's Short-horn Sale.

On December 9th, J. A. Richardson, Wall Lake, Iowa, will make his annual sale of forty head of Scotch and Scotch-topped cattle, and he will again have a nice offering for those who attend his sale. He will sell twenty-three head of cows and heifers and seventeen young bulls. Half the offering are Scotch cattle of the very best strains. We will have more to say of his offering in future issues. In the meantime drop him a card and have him send you a catalog as soon as they are out. When writing him kindly mention The Homestead.

Short-horn Bulls, $100 Each.

The Lockridge Fine Stock Farm, York, Neb., owned by Orville O. Jones, of that place is offering three very choice Short-horn bulls at the low price of $100 each. These bulls are mostly sired by Pleasant Lawn Knight, one of the largest and best breeding bulls ever used in central Nebraska. He was an exceptional good sire and his bulls have bred on in fine fashion. We would suggest ordering one of these bulls immediately. They are priced well worth the money, in fact such bulls are now selling at auction in Nebraska for around $200. Kindly mention The Homestead when you write. See advertisement on page 37.

Van Patten & Son's Durocs.

Those of our readers looking for a good boar from a good herd will do well to write Van Patten & Son, Sutton, Neb., or if supplied with a boar, remember that next February these gentlemen will sell a lot of sows and gilts that are sired by Uneeda Crimson Wonder. This is one of the very best Duroc boars in existence in the West, or in fact anywhere. His equal as a sow sire is seldom found. His daughters are now in many herds and they are the most highly prized of anything to be had. If interested in a boar mention The Homestead and write as above, or if interested in the sale, keep it in mind and watch this paper.

Metier's Milking Short-horn Sale.

On Thursday, November 20th, at Weldon, Iowa, will be the day when A. H. Metier will sell forty-four head of his milking Short-horns and it will be a splendid place for farmers and breeders to secure some of these splendid Bates cattle. The Metier herd is one of the oldest in the state and has been one of the few herds that has staid with the milking Short-horns through all these years. Quite a number of the cattle in this sale are of the Duchess of Oxford and Waterloo tribes, two of the most noted families of all the Bates tribes, and these two tribes have always been sought after by the leading Bates breeders. There are a number of these Waterloos and Oxfords in this sale that are straight-bred Bates and some of these are daughters of those two noted bulls, Duke of Wapsie and Walnut Duke of Hazelhurst 7th. Another splendid family in this sale is the Golden Pippens or Julia Wards, and there are a lot of them in this sale. This family is one of the highest prized families in this herd, and he and his father have bred them for over a quarter of a century. He is selling some grand young heifers in this sale and some splendid young bull calves. The herd bull, Arabella's Crescent Knight, a richly-bred Scotch bull and a grand good breeder will also be sold and he is a splendid bull for some man who wants a tried sire and a good one. This is a roan bull and is a son of Imp. Crescent Knight, a bull formerly used in the Cargill herd of Canada and later in the Robert Miller Herd at Lucas, Iowa. He is an eight-year-old bull but he is in splendid condition and he is a most excellent breeding bull. If you want this bull or you want some of those milking Short-horns make it a point to be at the Metier sale. When writing for catalog kindly mention The Homestead.

Guernsey Cattle Sale.

The fifth annual sale of Guernsey cattle from Fairview Farm of Des Moines is advertised on page 18. Sale takes place Thursday, November 20th. It will include ten head of registered bulls, thirty head of yearlings and two year-old heifers and thirty high-class cows. Fairview Farm has a high reputation as a dairy farm and is a source of supply of high-class dairy cattle. The sale will be an excellent one for buyers who want good milking cows without going to the expense of registered cattle. They are in perfect health and thrift. A tubercular certificate will be supplied to buyers on sale day. Further information can be obtained by writing to Wilcox & Stubbs, 1401 Grand Avenue, Des Moines.

Immune Boars and Sows.

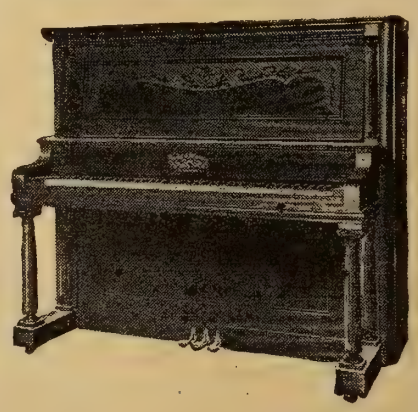
On page 32 A. W. Joy, Herman, Neb., advertises twenty-one head of Poland China gilts that will average 325 pounds all vaccinated and immune and he will sell them open or will breed them, and he is offering them at $40 and $50. They are sired by Hadley Golddust, Henry Expansion, Half Ton Wonder and Sampson, the latter a son of old Pawnee Lad and old Anna Price. These gilts are strictly choice. We have seen them and we have seen few better this season. He also offers ten choice brood sows at from $50 to $75 and fine spring boars at $30 each. These are all immune and they are all right in every way. Mr. Joy is planning on moving away and he is making the price on these where they will sell. Write him at once and mention The Homestead.

Thos. F. Miller Buys New Boar.

J. A. Jackson, Raymond, Neb., recently sold the big boar advertised in The Homestead to Thos. Miller, York, Neb. This is one of the best individual, big-type boars within the state. He is also a good sire, in fact an extra good one. This boar is sired by O.'s Jumbo by Wade's Jumbo and his dam is one of the best sows ever sired by Big Tecumseh. We were surprised that a boar of the excellence of this boar did not sell sooner. It is seldom indeed that a boar of this kind is for sale at all, and we would have thought that there would have been a dozen orders for him within a fortnight, but one thing is certain, and that is that he could not have found a better home than at Cedarbank Farm. Mr. Miller will have some sows bred to him in his winter sale. Mr. Miller also has some young boars, immune ones, for sale.

The Fuehr & Stemmer Piano.

Music in the farm home has a bigger influence in the moral and intellectual advance of the farm than any other one item. Music, it is said, is the language of emotions, upon the health



of which the attainments of civilization rest. There is probably no class of instrumental music which equals in popularity that of the piano. For that reason no farm home should be without a piano and none should be purchased without the purchaser having fully satisfied himself as to the character of the instrument. In this connection the Fuehr & Stemmer piano, which is advertised on page 7 of this paper, is recommended for mature consideration. This piano has become famous after twenty years of actual service. It has become a popular favorite in institutions devoted to musical instruction, because it possesses all those points which go to make up a good and serviceable piano. It might be said in this connection that this piano is in use in the Wartburg College, Waverly, Iowa; Bethany College, Mankato, Minn., Carthage College, Carthage, Ill.; Concordia College, St. Paul, Minn.; St. John's College, Winfield, Kan.; Hebron Academy, Hebron, Neb.; Iowa State Normal School, Cedar Falls, Iowa, and many others. In Bremer county, Iowa, alone 250 pianos of this make are in use. One of the reasons for the popularity of the Fuehr & Stemmer piano is that the manufacturers give a twenty-five-year iron-clad guarantee on the instrument and out of 14,000 sold they have never had a single one returned for any reason. In order that purchasers may satisfy themselves of all the claims made the manufacturers offer to ship a piano free to any reader of this paper on a thirty days' trial. For a copy of the catalog giving terms on this

C. E. GIBBS' SALE

SHORT-HORN CATTLE

SCOTCH AND SCOTCH-TOPPED

KLEMME, IOWA, NOVEMBER 19, 1913

LIVERPOOL SALE AND PEDIGREE CO., LIVERPOOL, NEW YORK.

splendid free offer fill out the coupon in the advertisement and forward it to the Fuehr & Stemmer Piano Co., 18 East 24th St., Chicago, Ill.

Short-horn Bull For Sale.

H. F. Funke, Greenfield, Iowa, is advertising for sale his two-year-old herd bull, Nonpareil Victor, a dark roan son of Violet's Nonpareil and out of Victoria's Lavender by Victor of Evergreen Park 5th. The grand dam is Lavender of Hill Farm 21st by the renowned bull, Imp. Merry Hampton. The imported cow in the pedigree is Lavender 31st by Brampton. Mr. Funke has sold his entire herd of Short-horns and wishes to dispose of this bull. He is a herd bull proposition for some one and the price is very reasonable considering the individuality and breeding of the bull. See page 32 and write or visit Mr. Funke.

Nagles' Chester Whites.

Chester White sows descending from prize-winning ancestors and bred to boars that have been siring winners, can be purchased from E. L. Nagle & Son, Deep River, Iowa. They have about thirty-five gilts that they are breeding to farrow in March. The gilts are bred to Lewis E., one of the great sires of the breed, Col. Evans, an Iowa State Fair winner and sire of winners, Right You Are, the first-prize pig at the Iowa State Fair 1913 and Nagle's Kind, a second-prize pig at the same show. Messrs. Nagle can please prospective purchasers in quality, breeding and price. They have thirty-five fall pigs that they will sell at a reasonable figure. See page 32 and when writing for prices kindly mention The Homestead.

Chester White Herd Boars.

W. A. Hoover, Oskaloosa, Iowa, one of the oldest and best breeders of Chester White Swine in the corn belt, has probably bred as many good herd boars as any breeder in the country. The champion boar at the Iowa and Sioux City fairs and the senior champion at the Illinois State Fair were sons of Mr. Hoover's great herd boar, Wonder, that was first at the Iowa State Fair in 1911 and has proven to be one of the very best sires that Mr. Hoover has ever owned. Mr. Hoover considers Wonder the greatest sire of the present day. At the present time he has a number of fall yearling boars sired by Wonder that are extra good and among them are several that would make high-class show boars for next year's fairs. Mr. Hoover has the goods and his prices are very reasonable. You will find him absolutely square to deal with as he always gives his patrons fair treatment. See page 38 and write him for a herd boar if you want a good one, mentioning The Homestead.

Cooper's Immune Poland Boars.

With this issue of The Homestead, W. B. Cooper, Milford, Neb., is starting an advertisement in which he offers six big, rugged Poland China boars at from $20 to $30 per head. These boars come of the finest big stock, are well grown, immune and all right. Mr. Cooper wants to turn them hence the low price. There is positively no excuse for any one to use a scrub boar this season when good ones may be bought in southern Nebraska for the prices they can this season. They are selling these boars at a small fraction above the market price. This season presents a peculiar condition, for we do not believe that there has been a season in years when a buyer's prospects were so good to sell a high-priced crop of pigs as they are from a sire purchased this season, and then again, there has been no time in the last decade when one could buy a pure-bred boar at practically market price like there is this season. We just want to say that Mr. Cooper's stock is good, and he is a good man to do business with. Mr. Cooper also has Shropshire sheep and S. C. R. I. Red chickens. If interested, address as above and mention The Homestead. See advertisement on page 32.

Polled Durham Cattle Wanted.

In an advertisement on page 32 Birkestrand Bros. announce that they wish to exchange an imported Percheron mare for Polled Durham cows or heifers. The mare is five years old, a beautiful dapple grey, and weighs 1,900 pounds. She is a good worker and has been working every day this summer. She has raised one colt. Breeders who have Polled Durhams which they would care to exchange for this animal may learn full particulars by writing to Birkestrand Bros., Route 2, Cambridge, Iowa.

Lewis' Chester Whites.

The Lewis Chester White herd advertised on page 32 is now offering for sale the principal herd boar, White Cloud 20465. This hog is a great breeder, carrying lots of quality as well as size, length and strong bone. His pigs have proven good sellers. He is a good breder, has a good disposition and is easily handled. He is only offered for sale for the reason that a great deal of his produce will be retained in the herd. He will be sold at reasonable prices. Mr. Lewis also offers fall and spring pigs of both sexes as will be noted in the advertisement. Address inquiries to J. E. Lewis, Brayton, Iowa.

Gasoline Engine Information.

In these days of low-priced farm power every farmer should make it a part of his education to understand gasoline engines from start to finish. Information of this kind may be obtained from a new book on engines which has been prepared by the Witte Iron Works and which will be sent free to any reader of this paper who asks for it. The Witte people manufacture the Witte engines made to burn kerosene, gasoline or gas. Witte engines are portable or stationary. They are sold for cash or on easy terms and in every case on a sixty-day trial. Before buying any engine, however, get a copy of the book referred to. Address requests to E. H. Witte, Desk D, Witte Iron Works Co., 1565 Oakland Ave., Kansas City, Mo. See advertisement on page 19.

Gibbs' Short-horn Sale—Last Call.

In last week's issue we called attention to the forthcoming Short-horn sale of C. E. Gibbs at Klemme, Iowa, on November 19th, and we want to again remind our readers of this important event. He is selling fifty head of cattle in this sale, and they are a well-bred and very useful lot, very largely of the milking Short-horn type. A large per cent of the cows that he is listing in this sale are of the Scotch topped kind on the very best of Bates foundation. It is very seldom indeed that you see so many large, useful cows, with big udders, and with so many calves at foot as Charlie Gibbs is selling in this sale. His chief herd bull is Red Duke, a bull that he secured at a long price over in Wisconsin, and he is a son of Sidelight. This bull was selected because of his breeding and he has a lot of the best milking strains behind him topped out with the very best of Scotch crosses. About fifteen of the cows in the sale will have calves by this bull and a great many of the females are in calf to him. There will be fifteen head of good young bulls in the sale, and there are quite a number of good ones. That splendid young Scotch bull, Pride Goods, a pure white is one of the choicest in the offering. He is a son of the well known Merry Goods, a bull bred by the Bellow Bros., that went to the Cahill herd at $1,000. This young bull

is a Cruickshank Secret and he is a March yearling. His grandsire is champion of Lyndale and his great-grandsire is Imp. Lavender Champion, a bull that made the reputation of the Alex John & Son herd at Bedford, Iowa. This bull is good enough for any breeder to use. He is selling a number of other good young bulls in this sale that will be appreciated by the buyers who attend this sale. The offering is a very practical and a very useful one and it will be a splendid place to lay in a supply of Short-horns. He is listing a nice string of young heifers in this sale also and many of these are out of the best cows he has on the farm. Send for his catalog and kindly mention The Homestead. See page 30.

Buying Lumber on a Business Basis.

During the past season an announcement of the Peter J. Seippel Lumber Compay has appeared in these columns from time to time. This company has for twenty-eight years occupied the position of a money saver to lumber buyers of the West. They are able to quote low prices because of the fact that they are the biggest manufacturers of lumber in he middle West. Taking material from the woods and working it up in their own mills and selling direct to farmers eliminates a great many items of cost that the ordinary lumber dealer must figure in. If the buyer purchases in car-load lots they offer to pay railroad fare both ways so that the selection of material may be made in person. The company is located at Dubuque, which has for many years been a great central manufacturing and distributing center for lumber. Those who are about to buy for the purpose of putting up new buildings or merely for making repairs should not neglect the opportunity to save money by purchasing from this company. Price lists, catalogs and other information may be secured by writing to the Peter J. Seippel Lumber Co., 204 S. Locust St., Dubuque, Iowa.

Choice Polled Durham Bulls.

We desire to call attention to three very choice Polled Durham bull calves that are offered for sale by R. O. Miller, Lucas, Iowa. These are all roans in color, and good ones at that. They are sired by Royal Roan 374122, a Cruickshank Rosemary bull, and two of these young bulls are out of daughters of Imp. Scotch Marigold, one of the greatest cows that has been seen in this country. The dams of these two young bulls are sired by Imp. Crescent Knight, a bull that was formerly used in the Cargill herd of Canada, and later in the herd of Mr. Miller. This bull was one of the greatest sires ever used in the West and he left some great cattle behind him. The other calf is out of that great cow, Imp. Fancy 17th by the noted roan bull Capa-pie. These three young bulls are the making of three great herd bulls when matured and while they are young it is a good time to buy them. The Marigolds and the Fancys are two of the most rare and two of the most sought after tribes today on either side of the water. Polled Durham breeders will be particularly interested in these bulls, as nothing better can be found in this country. When writing Mr. Miller kindly mention The Homestead.

Browning's Grand Champion Durocs.

Some thirty-five years have elapsed since the Browning herd of Duroc Jerseys was established by J. M. Browning, the father of H. E. Browning, present proprietor of the Browning herd at Hersman, Ill. Over 3,500 prizes have been won by this herd at the leading shows during the past twenty-five years. One hundred and fifty-six ribbons were won in 1913 at the Iowa, Minnesota, South Dakota, Michigan and Illinois State Fairs and the National Implement and Vehicle Show held at Peoria, Ill. Thirty-two of these were champions out of a possible thirty-seven that the herd was eligible to show for. His junior yearling sow, under-year sow, under-year boar and young herd were never beaten in the six shows. At these six fairs only four premier championships were offered and all were won by Mr. Browning. At the National Implement and Vehicle Show his herd won grand championship over all breeds. Tattletale 36th won five firsts, one second, five junior championships, was first in twenty first-prize herds, first in five get of sires and first in four produce of sows. The aged herds were placed first and second at every show but Iowa and there second. The under-year herd won twenty first prizes. The get of Volunteer or Chief's Col. was first in the get of sire class at all of the above fairs. Mr. Browning could only show for the produce of sow prize in four shows and won it at each of these. Disturber, Mr. Browning's sensational big-type show and breeding boar, died during the last few days and it is a big loss as Mr. Browning considered him one of the greatest boars he had ever owned. At the present time Chief's Col, the Illinois grand champion of 1908 nad the sire of many first prize and champion boars and sows, is at the head of the herd. A boar's value depends altogether on his ability to transmit his good qualities to his offspring. A most remarkable fact is that every first, second and third prize Duroc Jersey at the Illinois State Fair in 1913 is a direct descendant of Chief's Col. This fact alone would give him a record as one of the very greatest sires living at the present time. Mr. Browning will have his show herd at the International Stock Show at Chicago and it is well worth any breeder's time to carefully inspect this great show herd. Mr. Browning was awarded the prize of having the best ten head of swine on the Illinois State Fair ground. On December 18th, Mr. Browning will sell his entire show herd, a number of fall and spring gilts and some boar pigs. The sows will be bred to the two great boars, Disturber and Chief's Col., and should prove attractive propositions. Full particulars of this sale will appear in The Homestead.

Bonnifield's Polled Durhams and Short-horns.

W. B. Bonnifield, Ottawa, Iowa, has an excellent herd of Polled Durham and Short-horn cattle. He is a breeder with constructive ideas. He has been purchasing the best Short-horn cows in a number of the leading sales held during the past few years and these he is mating with a short-legged, thick, Scotch Polled Durham bull and has obtained excellent results from these matings. The calves and yearlings are short of leg, have excellent spring of rib and are of excellent conformation throughout. The herd bull is a roan as are many of his calves. Daughters of Villager, Anoka Sultan, Leader of Fashion and other noted sires are found in the herd and as well many of the leading Scotch families. Mr. Bonnifield has sold one of his farms and for that reason is going to make a public sale February 26th and sell about fifty head. Fifteen of these will be bulls and there will be few better bunches go through a sale ring. This will leave him about fifty head in his herd and it is his ambition to keep on improving his cattle and gain a front rank as a cattle breeder.

A Thousand Bargains.

Careful consideration of the record-breaking women's winter coat display in the big Fall and Spring Fashion Guide which will be sent free to every woman who writes to Philips-

born, may mean a great saving in the family expenditure for clothing. This wonderful showing of women's coats is the largest and best ever presented by any house in this country. It includes thirty-eight pages of coats, 101 different styles and sizes guaranteed to fit any woman. Philipsborn has made this a year of sensational values and money-saving opportunities such as has never been experienced. It may be said that every garment is the last word in the most desirable and newest fashions. A thousand bargains may be learned from this big book. Write for it at once. It is free to those who mention this paper. Address Philipsborn, the Outer Garment House, Dept. 109, N. W. Corner Van Buren & Peoria Sts., Chicago, Ill.

J. W. McDermott's Short-horn Sale.

The sale of Short-horn cattle which J. W. McDermott, Kahoka, Mo., will hold on Tuesday, November 25th, affords excellent opportunities for buyers who want first-class bulls and females of the most popular breeding. Ten bulls and thirty females are listed and all are in just such condition as to show their value. Mention of the ten bulls was made last week and we again desire to say that Mr. McDermott has never offered a more desirable lot. The offering of females is in keeping and those looking for good breeding cattle or some choice young show yard prospects will not be disappointed. The Village Maid cow, dam of the first-prize yearling bull at the International in 1912 and sold to the Wisconsin Agricultural College is a breedy appearing roan that should appeal to the more critical. The Campbell Ury heifer, Maid of Whitehall by Whitehall Rose, is a granddaughter of Imp. Sweet Maid 2d by Imp. March Knight. Her full front, even top and bottom lines and character are such that she should appeal to the more discriminating buyers. Whitehall Princess, yearling daughter by the same sire and of the Princess Royal family is a red heifer with style and character. A villager heifer that is a full sister to Countess S. is one Mr. McDermott thinks much of. A pair of decidedly attractive white heifers that should be carried on for next year's shows are listed. One is a Marr Lady Mary out of a March Knight cow, the other an Athene out of a Whitehall King cow. Both are by Whitehall Rosedale. There are listed fifteen cows that are heavy in calf to Fair Goods or his son, Good Count. A dozen or more choice yearling heifers just settled in calf are also listed. Nearly all of these are Scotch females of excellent breeding. Mr. McDermott will gladly mail you a catalog on receipt of your request for same mentioning The Homestead. Note page 35 for his advertisement.

Moderow Offers Immune Duroc Boars.

With this issue of The Homestead, Wm. Moderow, Beemer, Neb., is starting an advertisement in which he offers Homestead readers some choice herd-heading Duroc Jersey boars that are immune. The herd owned by Wm. Moderow is one of the best of the entire country. It has been built up by the use of the very best stock that money could possible buy. It has not been a question of price so much, as it has been a matter of finding the very best animals. Leading herds have been topped, and with the extra care in mating and with the good, wholesome treatment that everything receives on the Golden Valley Farm, advancement over the good things bought has been achieved. Today the efforts of this good stockman, and also the product of the very best that other good breeders have been able to produce will be offered readers of this paper and at such prices that it is more of a question if they can afford not to buy, than it is if they can afford to purchase. There are some fall boars by Blue Ribbon Model, he by Golden Model 2d, and the first-prize boar at Iowa, Minnesota and South Dakota in 1911 Two of these boars are really herd heading boars. Some few fall boars are by Moderow's Wonder by the great Uneeda Crimson Wonder, one of the greatest sires of the breed. Spring boars are by Moderow's Wonder, also the great B. & G's Wonder the junior champion boar at Lincoln, 1912. Others are by Chief Select 2d, by the great sire Chief Select, Chief Select 2d is far the best son of Chief Select that the writer has seen. He was generally conceded to be the best boar on the Iowa State Fair grounds two years ago, but he did not get the top place in his class. He cost Mr. Moderow $600 and well worth the money. It is worth something to buy boars of this breeding and it is worth something to buy your boars of Mr. Moderow. Kindly notice the advertisement on page 32 and when writing kindly mention The Homestead.

Miller's Short-horn Importation Arrives

It is with pleasure that we call attention to the advertisement of that well-known breeder, R. O. Miller, Lucas, Iowa, on page 32 who just recently arrived home from Canada with a strictly choice importation of Scotch Short-horns. Mr. Miller was assisted in the selections of these cattle by the veteran breeder and showman, Robert Miller, of Canada, than whom there is no better judge on the continent, and his nephew, John Miller, Jr., and these cattle were the pick of the very best herds in that country. Included in this importation are some very choice young bulls, everyone of which are of the richest Scotch breeding. One of the best of these is royally bred Cruickshank Nonpareil, and he is a son of the noted bull, Spicy Master. He is a nice red bull in color, with an excellent head and horns, and is good in his lines and will make a splendid herd bull. Wedding Master is a nice roan bull and is sired by the Marr-bred bull, Merry Master, his grandsire being the great Ben Lomond. He belongs to that very select but very scarce tribe, the Wedding Gifts, and he is a bull that would be a credit at the head of any herd. Another good red bull is Augusta Victor, and he is a splendidly-bred Missie. This bull has a splendid head and horn, is a dark rich red in color, and will make a splendid herd bull. Another good bull is Tommy W., a son of Sittyton Victor and he belongs to the Countess tribe that is well and favorably known in Canada. He also has a good Clementina, and a lot of other bulls. He also bought over twenty choice heifers of the Buttercup, Red

SELLS' GREAT SALE
DUROC JERSEYS

80 HEAD | 30 BOARS, 50 SOWS | 80 HEAD

INDIANOLA, IOWA
WEDNESDAY, NOVEMBER 26, '13

I AM moving away from Indianola and will sell all my **best boars and sows.** Among the boars I will offer are sons of **Crimson Wonder Again, L. E.'s Col., Model Chief VIII.** and other noted sires. I am selling **Lot Wonder,** a full brother to the **champion boar, Crimson Wonder III.** I am selling some great boars by **L. E.'s Col.,** out of **Crimson Golden Rod,** a daughter of my **famous brood sow, H. A.'s Queen.** I am selling a daughter of **Crimson Wonder Again** and out of **H. A.'s Queen,** and **20 fall sows** sired by **L. E.'s Col.** Also a **splendid Crimson Wonder yearling.** Others by **Harding's King of Cols., Col. Gano, I Am A Crimson Wonder II.,** and other great boars. **Also some choice sows with litters at side.** If you want Durocs here is the greatest opportunity of the year. Cols. Kraschel, Allen and Putnam, auctioneers. M. T. White, field man for The Homestead. Send for catalog and mention The Homestead. Address

W. M. SELLS, INDIANOLA, IOWA

THE HOMESTEAD SELLS HORSES

FRED GALLIERS, veterinary surgeon, Albia, Iowa, has been an advertiser in The Homestead and recently wrote the following letter with reference to the advertising subject: "I have advertised in The Iowa Homestead for a number of years, off and on, offering stallions and colts for sale. I have also advertised in other papers, but I have had the best results from The Homestead. I have no criticism to make of its way of doing business." Farmers or others who have pure-bred horses to sell will serve their best interests by obtaining advertising rates. Address

THE HOMESTEAD CO. - DES MOINES, IOWA

TOO LATE TO CLASSIFY.

MILLER'S 1913 SHORT-HORN IMPORTATION ARRIVED

I JUST recently arrived home from Canada with a **choice importation of young Scotch bulls and twenty head of as good heifers as was ever brought to this country.** Among these bulls is a royally-bred **Missie,** a **Nonpareil,** a **Clementina,** a **Wedding Gift** and a **Countess** that are good enough to head any herd in America. Among richly-bred heifers will be found **Mina, Village Girl, Buttercup, Rachel, Beauty, Louisa** and **Red Rose** tribes and these are as good as you ever looked at. **I am offering these at private treaty** and if you want something real choice it behooves you to come and see these at once. Address **R. O. MILLER, LUCAS, IOWA.**

Rose, Rachel, Beauty, Louisa, Mina and Village Girl tribes. You never saw a more select bunch of heifers in one lot, and they are all good reds and roans in color. Mr. Miller is offering these cattle at private sale, and if any of our readers are on the market for a good young bull or some richly bred heifers, it will pay them to go and see these cattle at once. You cannot afford to delay the matter, but go at once, and get in on the ground floor. If you write Mr. Miller kindly mention The Homestead.

Judge's Great Bull Offering.

One of the splendid Short-horn bull offerings to be sold this fall will be found in the sale of J. T. Judge at Carroll, Iowa, on December 17th. Mr. Judge is selling fifty head in this sale, all of which are Scotch except three head, and it is the best lot of cattle he has ever sold. Included in this sale will be twelve head of Scotch bulls, and among these are some of outstanding individual merit, and good enough to go into any herd. One of these is Diamond Sultan, a rich red roan yearling, and a son of the noted prize-winning bull, Scotch Sultan. His grandsire was Golden Favorite, a bull bred by the Cargills, of Canada; then comes the great Bapton Diamond and then the equally noted Bapton Ensign. Mr. Judge purchased this bull to breed the heifers sired by his other bull, Sultan Standard, and he is a wonderfully thick fellow, and the making of a most excellent herd bull. He is listing a great string of young bulls sired by his herd bull, Sultan Standard, and among these is Sultan March, a pure white yearling bull sired by Sultan Standard and out of the great cow, Gold Hunt Maid. This bull is outstanding and will make a great herd bull. Standard Count is also a pure white, sired by the same bull and out of Sunlight Lass by Prince Robin and he is one of the greatest young bulls in the offering. He is listing a splendid red yearling bull that is out of Veronica 6th by the great Clear The Way that is also a good bull. His grandam is the noted cow, Imp. Veronica, by Craibstone, and this bull will fill the eye of a lot of breeders who are wanting a red bull to head their herd. He is selling a couple of nice young roan bulls, two of which are Cruickshank Victorias, and taking them altogether it is by far the greatest collection of Scotch bulls that Mr. Judge has ever sold since he has been engaged in the breeding of Short-horns. You will want the Judge catalog and after seeing it you will be sure to go to his sale. If you will drop him a card now and mention The Homestead, he will place your name on his mailing list and will forward you his catalog as soon as it is out of press.

Sells Great Sale Durocs.

On Wednesday, November 26th, at Indianola, Iowa, W. M. Sells will make a removal sale, and he will offer eighty head of Duroc Jersey boars and sows and it promises to be one of the good sales of the year. He is moving away from Indianola, and is therefore selling nearly every one of his celebrated brood sows, fall sows and spring gilts. There will be thirty boars in his sale and fifty sows, so you may know he will sell some good things in this offering. Among the boars he will sell is Lot Wonder, a two-year-old boar sired by Crimson Wonder Again and out of Lottie A. by Top Notcher Again. This boar is a full brother to Crimson Wonder III, the noted grand champion boar that now heads the P. W. Weberg herd. The Twenty-nine spring boars that he is selling are sired by L. E.'s Col., Model Chief 8th and I Am A Crimson Wonder II. He is selling a litter by L. E. Col. and out of Crimson Golden Rod, and she is a daughter of old H. A.'s Queen, and there are some splendid boars in this bunch. Those breeders who are looking for a good boar will find in this bunch some that are good enough for any of our best breeders. There are a number of boars in this sale that breeders will like and it will be the last chance to buy one at a public sale. He is selling twenty-five good fall sows and some of these are as good as he has ever had in a herd. He is also selling some of his noted brood sows. Among these is Iowa Belle 2d, a daughter of Crimson Wonder Again and she sells with a litter by L. E.'s Col. Best of All is another good sow and she sells with a litter by L. E.'s Col. Model Queen 4th, is a daughter of Golden Model, and she is a daughter to the grand champion sow, Model Queen, that sold in the Putnam sale for $705. This sow sells open. Belle Notcher, another one of his most famous brood sows, goes in and she is a dam of Belle's Crimson Wonder, the champion boar at the Nebraska State Fair in 1910. Golden Belle, a daughter of Harding's King of Cols. and out of the great Nebraska Belle is another good brood sow that he is listing for this sale. Twenty good spring gilts will also be sold and these are sired by the grand champion boar, I Am A Crimson Wonder II, Model Chief 8th and I. E.'s Col. It will be the last chance you will have this fall to buy Durocs at a public sale. Write Mr. Sells at once for his catalog and kindly mention The Homestead. M. T. White will represent this paper at the sale and will care for any bids sent in his care. See advertisement on page 31.

PUBLIC SALE, Tuesday, Nov. 25, 1913, 25 head of choice Duroc Jersey boars. Send bids to auctioneer. These boars will go at bargain prices as I am not going to any large advertising expenses. F. E. Zimmerman, Metamora, Ill.

Kent's Chester Whites.

If any of our breeders want a good Chester White boar, Thos. F. Kent, Walnut, Iowa, has them. For the past several years he has shown one of the most successful prize-winning herds on the circuit. He has a choice lot of boars for sale and he can fill your order for anything you want in the sow line. See page 38.

Rees Offers Scotch Bulls.

Those of our readers who want a right-choice Scotch bull should write or go and see Howell Rees & Son, Pilger, Neb. They are offering twelve head of bulls for sale sired by their noted bull, Ruberta's Goods, and other noted sires. If you want a right good bull they have them. Kindly mention The Homestead when writing them. See page 35.

Hampshire Boars For Sale.

On page 35 Roy E. Fisher, Winside, Neb., offers a choice lot of Hampshire boars for sale. These are all ages and as he wants to close them out will make special prices. He won ninety-six ribbons at the fairs this fall, so you may know he has a good herd. Write him right away about these boars and mention The Homestead.

New Holstein Sale.

One hundred and eighty head of registered Holstein cattle have been cataloged for public sale to take place at Syracuse, N. Y., December 2d and 3d. Breeding and individuality are said to be of the highest order. These cattle have been tuberculin tested and personally inspected. For catalog or information, write to the Liverpool Sale and Pedigree Co., Liverpool, N. Y. See advertisement on page 30.

Farver Offers Immune Boars.

One of the best Poland China herds today in northern Iowa is owned by E. E. Farver, Ocheyedan, Iowa, the owner of the great boar, Farver's Goliath, and E.'s Defender. He has a splendid lot of boars, all of which are cholera proof and immune, and he is closing these out at farmers' prices during the next thirty days. These boars are right in both price and quality. Get busy and order one of these boars at once. See page 37.

Stover Grinders.

The Stover grinder, which is one of the old-time farm machines, has been perfected so that today it is an ideal grinder for the preparation of alfalfa kafir or pea-vine hay. It will cut and grind fodder so that it is an ideal feed and put it into a condition where the animal will extract the largest proportion of food values. Other farm machinery of equal merit is made and sold by the Stover Mfg. Co., 28 Vine St., Freeport, Ill. Send for catalog. See advertisement on page 8.

A Poland China Boar at $20

Seems that when a Poland China boar, from one of the oldest and best established herds can be bought for $20 that there would not be a scrub boar of any kind used. Just such an offer is being made by A. Roesler, Wilcox, Neb. He has saved fifteen boars of his crop, and they are as near alike as can be found, weighing about 200 pounds each and of the very best breeding. Mr. Roesler does not want you to take the time to write and ask about these boars, but send your order at once and send check for $20 and he will ship you a boar and if not pleased will refund your money. This is one of the most remarkable offers ever made and all of these boars should be gone within a week. Mr. Roesler says that his supply of old corn is about gone, and to buy corn is going to cost him eighty-two cents a bushel and hence the cost prices on these boars for quick action. Mention The Homestead and write at once. See page 32.

An Extra Choice Poland Boar.

With this issue of The Homestead, L. F. Reilly, St. Paul, Neb., starts an advertisement in which he offers his proven Poland China boar, Combination. This is without question one of the very best boars of the breed and a sire with extremely few equals. Combination sired the first prize under six months boar at Nebraska State Fair in 1911 and the pig is now at the head of the John Schmeider herd at Remsen, Iowa, and considered by competent judges to be one of the best boars of northwestern Iowa. Combination is sired by Blue Valley Quality and out of Blue Valley Ex by Exception. It would be difficult to imagine a better pedigree and the boar positively backs it up. This boar can be had at $150 and is positively a gift at the price. The writer is familiar with the record of this boar, his record as a sire, also the records of many sows and daughters in other herds. They breed on and on. We recommend this boar. A breeder can make more progress in one season by the use

SHORT-HORN HERD BULL FOR SALE

NONPAREIL VICTOR

A SON of Violet's Nonpareil 282673, out of Victoria's Lavender by Victor of Evergreen Park 5th, second dam Lavender of Hill Farm 21st by Imp. Merry Hampton tracing to Imp. Lavender 31st by Brampton. of this good boar than he will make in several seasons with the use of an ordinary sire. Write Mr. Reilly at once and mention The Homestead. See advertisement on page 32.

Ruebel Bros.' Boar Bargains.

If you want a good Poland China boar, sired by a recognized sire, and some by a noted show winner, then get in touch with Ruebel Bros., Marathan, Iowa. They have a grand good lot of boars for sale, out of 600 and 700-pound sows and every one is cholera proof and immune. You certainly will not go wrong if you order a boar from these boys. Read their advertisement on page 37 and when writing them please mention The Homestead.

Wm. Fagan & Sons' Short-horn Herd.

A herd of Short-horn cattle that has been founded the past few years and that will be a factor in the pure-bred stock business of Nebraska in a short time is the herd owned by Wm. Fagan & Sons, of Abbott. These gentlemen have been engaged in the livestock business in a big way for a number of years, but they have devoted the greater part of their attention to the growing and feeding of stock cattle and sheep. A few years ago, however, they started a herd of pure breds and they have made many valuable additions from some of the leading herds of Nebraska. They have been heavy buyers from Geo. Allen & Sons, Shoebotham Bros., Blank Bros., and L. Chesnut & Sonand only recently purchased a fine lot of pure Scotch stuff from S. A. Nelson & Sons. At the head of the herd is the fine Clipper bull, Clipper King, 2d, sired by Victor Sultan and out of Cora, 15008 by Rustler by Imp. Prince Oderic. The next dam is Clarinda by the great Conqueror. The third dam is Cleopatra by British Prince and the fourth dam is Imp. Corea by the great William of Orange. This bull is a goodly sort, and among the good bulls in use in the West. We will have more to say of this herd in future issues of The Homestead.

THE LIVE STOCK MARKET.

Union Stock Yards, Chicago, Nov. 8.—The week in the beef-steer trade is closing with the trade in dilapidated shape with no bright prospect for next week. Declines of 15c to 40c per hundredweight have caught the bulk and good heavy cattle that have had to sell 40c lower than Monday have been in a big majority. Even yearlings have suffered, but the rule has been that the lighter cattle were, the more readily they could be sold and the least discount. Good heavy bullocks that were in request anywhere from $9 to $9.50 on Monday have borne the brunt of the battle. More weight has been available than most people in the trade believed and there is no reason to assume that feed lots have yet been depleted of heavy cattle. It is the logical sequence of a big corn crop last year and present conditions will in all probability be reversed next year.

The damage this week was done on Wednesday when Illinois feeders contributed a surprisingly heavy supply of finished steers weighing 1,400 pounds and up. Many of them, especially late arrivals, were not salable on that session and a clearance has not yet been effected. But heavy cattle have not been the only sufferers as the slump has been spread all down the line, but owing to scarcity of western cattle, killing stuff selling from $8.25 down has been hurt least. Even choice yearlings are 10c and 25c lower, as the $9.75 kind on Monday had to take $9.60 on Wednesday and it is improbable that they would have done as well later. The $7.50 to $8.25 cattle have lost anywhere from 10c to 25c while a crooked class of heavy cattle selling at the close at $7.75 might have earned $8.35 on Monday. The big decline has been on the plain heavy, but crooked cattle and also good to choice stuff too heavily freighted with beef. Such steers as are now on an $8.50 to $9 basis are 40c lower than Monday, while the crooked weighty stuff looks 50c to 60c lower.

Market prospects for big fat cattle certainly are not luminous. Holders of such bullocks have only about thirty days to go, as after the International distributors will be filled up for holiday trade and a whole load of fat stuff goes a long way subsequently. Killers figure that the break this week will jar a lot of heavy cattle loose and they are ready for the windfall.

Assertion that a beef scarcity exists finds emphatic contradiction in a glut of fat bullocks at the stock yards. Grades of steers selling at $11 per hundredweight a year ago have trouble in realizing $9. Big cattle of show quality have to sell at $8.85 per hundredweight and packers do not want them on that basis. There is no explanation except that the beef cannot be vended. Trash commands a good market, but under present conditions neither weight nor quality is a credit to a steer at the stock yards. The logical results will be a dearth of prime cattle next year and return of famine prices. This heavy beef ought to be accessible to the consuming public at reasonable cost, but few retailers will handle it. While prime, bullocks were a drug trash sold like hot cakes and killers could not get enough western grass cattle of the $7 and $8 varieties. Demand centers on something cheap and a canner cow outsells a fat bullock, when intrinsic value is reckoned with.

Economy in the use of corn is the obsession of the average feeder at present. Where cattle were being bedded down with ear corn last year, kernels are being counted now. Livestock is being liquidated to avoid a board bill and as the season advances this policy will receive emphasis. Killers have heralded an intention to appraise livestock lower and growers have, in many cases, concluded to save grain.

The market on butcher cows and heifers has withstood well the adversities that overtook the beef-steer trade at mid-week, having had their break last week and supply of she stuff having been of moderate proportions throughout the week. As compared with a week ago little change can be detected in the trade on any class of cows now selling under $6, but the plain to good butcher cows selling between $5 and $6 are about 10c to 15c higher than the extreme low time last week and even cutters and decent canners are strong to a little higher than low time last week. Fat beef cows selling from $6.25 up are 10c to 25c higher than a week ago and 15c to 25c higher than low time last wee, while $6.50 to $8 heifers show 25c gains over recent low time.

The trade is inclined to the belief that the low spot of the season was uncovered on Wednesday of last week in the butcher cattle trade. Packers are finding broad outlet for the cheaper grades of beef, the range shipping season is practically over, relief should come soon from the heavy runs of cheap cattle with which Eastern markets have recently been wrestling and anti-winter liquidation of cornbelt she stuff shows indication of subsiding.

Sympathizing with the break since Monday on beef cattle and working under the influences of a heavy mid-week supply and only fair country demand, stock and feeding cattle values closed at the week's low point, 15c to 25c lower than Monday and with the general run of offerings selling on no better than a steady to 10c higher basis than at last week's low time. Eastern demand still shows curtailment from the influx of Canadian stockers. A spread of from $6 to $6.85 is taking the the bulk of the 600 to 850 -pound stockers and $6.60 to $7.25 most 900 to 1,100-pound feeders, though choice yearling feeders reach $7.15 to $7.50 and a few selected fleshy feeders $7.60 to $7.75.

By the middle of December it is expected that the process of depleting Canada of marketable livestock by American killers will be complete. Canada is already showing alarm over prospective shortage and will probably be forced to remove its present duty at an early date to secure a supply of meat from the United States. Very few beef catte are now coming from Canada, receipts from that quarter being mainly of stockers and feeders.

Bearish predictions, regarding the winter hog market emanating from packing sources is deterring growers from putting on weight, and those who cashed pigs earlier in the season, thereby avoiding risk and saving a feed bill, are congratulating themselves on their sagacity. Everything points to a season of low yields with an excess of mediocrity and trash early in the winter, followed by scarcity and higher prices during the spring and summer months. Wisconsin is cutting hogs loose, and according to D. D. Cutler, general livestock agent of the Northwestern road, that state has a record crop to market. Kansas City and Omaha are both getting big runs, suggesting that the short-corn area will be in the mood to accumulate when they can put up house droves at a range of $7 to $7.50, but nobody is staking his reputation on where the bottom of the slump will be struck.

"Bert" Overman, Swift's hog buyer, who is just back from a tour of western markets, reports swarms of underweights everywhere. Omaha's average weight last month was only 233 pounds while that of Kansas City was 185 pounds and at Chicago the average is making strenuous effort to get down to 200 pounds. This decrease despite the fact that pigs are constantly acquiring weight and it means that the country ih not disposed to convert corn into pork in the face of threat of lower prices.

Packers' bear campaign in the hog trade was pushed vigorously the first half of the current week, $7.85 stopping the best on Wednesday, while the general average price was shaved down to $7.62. On resultant light runs there has been a logical reaction of 25c, an $8.10 top and $7.70 to $8 bulk being established on Friday, but that the advance will be short lived nobody in the trade doubts. The Friday trade closed on the following price basis:

Bulk of sales	$7.70@8.00
Mixed, 215 to 250 lbs	7.60@7.85
Mixed, 170 to 200 lbs	7.70@7.90
Medium weights	7.80@7.95
Light butchers	7.90@8.05
Heavy butchers	7.90@8.10
Light shippers	7.85@8.00
Heavy shippers	7.95@8.05
Heavy packing	7.50@7.75
Rough heavy packing	7.35@7.50
Trowout packing sows	6.60@7.25
Fair to choice light	7.60@7.90
Light-light, 135 to 155 lbs	7.35@7.75
Pigs, good to fancy	6.50@7.50
Pigs, inferior to fair	5.50@6.40
*Boars, inferior to choice	1.00@3.00
Stags, subject to dockages	7.90@8.25
Government throwouts	3.75@5.00

*Subjejct to government inspection.

Live mutton trade has been doing some very erratic and more or less spectacular stunts this week, closing 10c to 25c higher than a week ago on fat classes and at the highest levels since last July for matured muttons and yearlings, while lambs are higher than at anytime since last September. The trade will do well not to ignore the fact, however, that Iowa, Illinois and Indiana cornfields are full of ovine stock that would be forced to the shambles by unfavorable weather, a fact that warrants expectancy of a choppy set of markets.

The bulge this week is counted upon to attract a liberal supply early next week especially as corn is high and hundreds of holders of western stock, taken out at high prices as feeders, are ready to cut loose to save feed and grab any profit there may be in sight, and present prices look none too stable. Natives are showing up in profusion from Wisconsin, Michigan and Iowa and are much more numerous than the trade had predicted. Range offerings have degenerated to feed quality almost entirely, and pretty trashy feeders at that in the main, but country demand for thin stuff of decent quality continues good. Closing tranactions this week were on the following basis of prices:

Lambs, good to prime	$7.40@7.75
Lambs, fair to good	6.85@7.40
Lambs, common to fair	6.25@6.85
Lambs, culls & Coarse bucks	5.50@6.25
Lambs, feeders common to best	5.00@6.75
Ewes, good to choice heavy	4.25@4.50
Ewes, good to choice handy	4.40@4.60
Ewes, medium to good	3.85@4.25
Ewes, culls	2.50@3.50
Ewes, breeding, 1 to 3	4.60@5.25
Ewes, bdg. aged, solid mouths	4.25@4.60
Ewes, feeders	3.10@3.85
Yearlings, good to ch. handy	5.75@6.25
Yearlings, fair to good	5.25@5.85
Wethers, good to choice	5.00@5.25
Wethers, feeders	4.00@4.60
Bucks, good to choice	3.50@4.00

HORSES.

M'DERMOTT'S SALE SCOTCH SHORT-HORNS

KAHOKA, MO., TUESDAY, NOV. 25, '13

40 Head: 10 Bulls, 15 Cows, 15 Heifers---All Good

IN this annual draft sale are listed both bulls and females that should interest breeders looking for herd-header material, also show cattle. Special attention is directed to the white bull, Golden Count, calved September 30, 1911, sired by Good Count, dam Golden Girl by Choice Goods, and out of Golden Abbotsburn. He is a high class herd header, good from end to end; Whitehall Prince, another white two year old by Whitehall Rosedale and out of an imported Rosewood cow; a roan February calf by Good Count and out of an Avondale cow; a roan yearling by Whitehall Rosedale and out of a Glenbrook Sultan cow and a King Cumberland yearling afford unusual opportunities for selecting herd bull material. A Village Maid cow; a Campbell Cry show heifer, Maid of Whitehall; a Villager heifer, full sister to Countess S.; a pair of white junior heifers, one a Marr Lady Mary by Whitehall Rosedale, the other an Athene by Whitehall King are excellent prospects for junior yearlings. These, with the fine lot of cows heavy in calf to Fair Goods and Good Count and the fine lot of useful yearling and two-year-old heifers, offer exceptional opportunities to invest in good Short-horns. Col. Carey M. Jones, auctioneer. Catalogs that give full information will be mailed on receipt of request mentioning The Homestead.

J. H. COPE - - - - **CARLISLE, IOWA**

Clean, Healthy, Profitable Hogs

WITH THE **Hog-Joy VERMIN KILLER**

Rid your hogs permanently of all health-destroying vermin. You can do this with no bother at all, and at hardly any expense, with the Hog-Joy Automatic Oiling Machine.

The HOG-JOY OILER has no equal for strength, simplicity, economy and reliability. Only three parts, all heavily built of cast iron; can't break or get out of order. No small openings to clog up when hogs rub against it; no little valves to give trouble. Not effected by heat or cold.

Requires no attention after it is started. Hogs like it, and keep their skins free from parasites, mange and scabs—in better condition to resist disease and to develop more rapidly.

No costly patent fluid necessary. Crude oil is cheapest and best; used for years and approved by state experiment stations. The machine puts all the oil on the hogs, not a drop on the ground. Let your hogs try the Hog-Joy 30 days free of cost to you. Shipped ready to start with 2 gallons of oil. Price $10. Your money back if not satisfied. Send money order, check or cash at our risk. Reference, any bank in Springfield, Illinois.

A. A. HUSEMAN, Beecher, Ill., says: "I am well pleased with the machine. Would not be without one. Will get one more later on."

Agents Wanted This machine is an easy seller. You can get good pay for your time. Write for our liberal offer to agents and free literature.

THE HOG-JOY COMPANY

DUROCS

FEBRUARY and March males and gilts, lengthy and heavy boned, at reasonable prices. B. B. McAlister, Blakesburg, Iowa.

"I had over 100 hogs which became stiff, and their hair stood the wrong way. I thought they were going to die. I took eight which were in the worst condition, separated them from the rest, and fed them "Sal Vet." Some were so weak I had to put the preparation upon their tongues. In a few days, they all ate well, and after another week you could not tell them from the hogs which were perfectly well."—Wm. C. Bohnsack, Montpelier, Iowa.

Before Paying Me a Single Penny—I'll Make This Same "No-Pay-in-Advance" Offer to You

Sidney R. Feil, President

is a Registered Pharmacist, a graduate of the Cleveland School of Pharmacy and of the National Institute of Pharmacy. He has been engaged in laboratory work for more than twenty-five years and was formerly assistant to Dr. Nathan Rosewater, former Chemist of the Ohio State Dairy and Food Commission, for many years engaged in compounding veterinary remedies.

Here are Just a Few of Their Letters

Good Medicine

"We have used one barrel of 'Sal-Vet' and now want another as we find it is good medicine."—P. G. Henderson, Ex. Pres. Red Poll Cattle Club of America, Central City, Iowa.

Sure Knocks Worms

"Before I commenced feeding 'Sal-Vet' my hogs were coughing badly, but since feeding the 'Sal-Vet' the cough has entirely left them. It sure does knock the worms."—James Anderson, Sloan, Iowa.

Hogs Look Fine

"My hogs were in bad shape when I received your 'Sal-Vet.' Since feeding it, they look fine and *are* fine. I have not lost a hog, but those belonging to my neighbors on all sides have died."—D. H. Manshop, Colo, Ia.

Hasn't Lost a Hog

"All summer I have been feeding 'Sal-Vet' to a number of my hogs. I have not lost a single hog, but my neighbors all around here have lost hundreds of their hogs."—W. T. Huckstep, Denison, Iowa.

Satisfied

"I am more than satisfied with the results from 'Sal-Vet.' It is a sure worm expeller."—J. M. McGuire, Columbus Junction, Iowa.

Just Fine

"My hogs have done just fine, and my horses have greatly improved since I have been feeding 'Sal-Vet."—B. A. Ivans, Leon, Iowa.

Good Work

"South of me every farmer has lost his hogs from cholera, even up to the adjoining farm, and it is still raging. Your 'Sal-Vet' did good work for me."—Cliff E. Conover, Holstein, Iowa.

Has Them All Beat

"I find 'Sal-Vet' a great worm destroyer for all kinds of stock. I have fed lots of different remedies, but 'Sal-Vet' has them all beat."—R. L. Whitehead, Thayer, Iowa.

All Right in 10 Days

"When your 'Sal-Vet' arrived my hogs were sick and dying. In less than 10 days they were all right and are now doing finely. I will not be without 'Sal-Vet' again."—S. R. Wallace, Ainsworth, Iowa.

Sal-Vet a Big Help

"We have 350 head of sheep, some of which were infested with worms and in a bad way. 'Sal-Vet' has been a great help to them."—J. H. Arney, Chester, Iowa.

No Loss Since Feeding Sal-Vet

"I have not lost a single pig from worms since I commenced feeding 'Sal-Vet.' Furthermore, I am confident that none of my hogs are harboring any worms since they have had access to 'Sal-Vet.' It is all that you claim."—John McFarland, Malvern, Iowa.

The Best and Least Expensive

"I like to feed 'Sal-Vet' to hogs of all ages, as it completely cleans them of worms without starving the hogs before feeding it. I consider 'Sal-Vet' by far the best and least expensive worm destroyer and conditioner I have ever fed."—Jens Ingwerson, Avoca, Iowa.

Not a Single Loss

"I have not lost a single lamb since using 'Sal-Vet.'"—A. F. Anderson, Brayton, Iowa.

Beyond Expectation

"Results obtained from 'Sal-Vet' were beyond expectation. It is by far the best hog conditioner and worm destroyer I have found."—A. F. Wolf, Blairstown, Ia.

Pleasing Results

"I am well pleased with the results of feeding 'Sal-Vet.' Our hogs had no cholera, while our neighbors all around us have lost all of theirs."—J. B. Jolliffe, Rolfe, Iowa.

Kept Hogs Healthy

"'Sal-Vet' does even more than you claim for it. I have been feeding it, and so have some of my neighbors. Altho' lots of hogs around here are dying, those belonging to 'Sal-Vet' feeders are healthy".—Mrs. Chris Kruse, Allison, Iowa.

Hogs Doing Well

"I want to tell you that many farmers in this vicinity lost many hogs during the past season. My own hogs are doing well since feeding them 'Sal-Vet.' It is all you claim for it."—Levi Bannister, Walcott, Iowa.

Paid for Itself

"Altogether I have fed seven different kinds of stock remedies, but 'Sal-Vet' is the only one of the lot that has paid for itself. You may refer me to any one in doubt of the value of 'Sal-Vet.'"—Geo. A. Weimers, Rock Valley, Iowa.

No Sign of Worms

"I was surprised at the rapid improvement my fattening hogs showed during the sixty days I had been feeding 'Sal-Vet.' None of those I butchered showed any signs of worms. Have fed different remedies to expel worms, but 'Sal-Vet' beats them all."—T. A. Jackson, Wharton, Iowa.

Fully Convinced

"Several weeks ago I sent for 100 lbs. of 'Sal-Vet' with the understanding that it was to do just what you claimed for it. I am now sending my check, as I am convinced that 'Sal-Vet' is a money maker for every farmer. I do not think it has an equal for conditioning horses; every one who sees my horses, comments on their remarkably fine appearance and this in spite of a hard spring's work."—Arnold Hydes, Gaza, Iowa.

Not a Loss

"Have had good satisfaction from the 'Sal-Vet.' Others in this neighborhood have lost hogs, but I have not lost a single one."—Emmett Reed, College Springs, Iowa.

Never Had Hogs Do Better

"After feeding 'Sal-Vet' for about ten days, I noticed the pigs were expelling worms, and after that, I never had hogs do better nor gain faster."—Walter Clark, Shambaugh, Iowa.

Best Ever

"I have fed 200 pounds of 'Sal-Vet' and can say that it was the best worm destroyer that I ever used. When I started to use it, I found that within twenty-four hours the number of worms expelled from my hogs was surprising."—H. C. Grundy, Walnut, Iowa.

A Great Remedy

"I can truthfully say that 'Sal-Vet' is a great remedy. Farmers all around me have been losing hogs since last fall, while I did not lose any, nor did I have one that showed any signs of sickness."—G. R. Pontzius, Newport, Iowa.

Way Ahead of All Others

"'Sal-Vet' is all right and way ahead of all other preparations for which I have paid twice the amount."—R. M. Skillen, Breeder Duroc-Jersey Hogs, Greene, Iowa.

Entirely Free from Worms

"My hogs were wormy when I received the 'Sal-Vet,' but now after feeding them a few weeks, they are entirely free from these parasites."—A. E. Baldwin, Lake Mills, Iowa.

Wants 300 Pounds More

"My hogs were in awful condition when I received your 'Sal-Vet.' I had lost about sixty, but since feeding the preparation I haven't lost but four or five. It certainly took the worms from them. I find it also got the worms in my horses. You can send me 300 lbs. more."—F. H. Stevens, Kingsley, Iowa.

What They All Want

"Am feeding my second keg of 'Sal-Vet.' It saves the hog, at least they live in hog cholera infected districts, and that is what a fellow wants."—Daniel Swindler, Thayer, Iowa.

I'll Feed Your Stock 60 Days Before You Pay

My Offer Has Saved Stockmen Thousands of Dollars

I WANT to prove to you what I have proved to thousands of Iowa Farmers—on your own stock and before you pay me a penny. All I ask is a chance to show you how Sal-Vet will rid your stock of worms, make them thrive better, look better—make you more money and lessen their liability to contract diseases and die. If it don't do all I claim I'll cancel the charge and you won't owe me a penny. Write me how many head of stock you have—

Send No Money—Just the Coupon

I'll ship enough Sal-Vet to last all your stock 60 days. You simply pay the freight charges on arrival, feed it according to directions, and at the end of 60 days report results. Then if Sal-Vet has not done all I say—if it does not rid your stock of disease-breeding stomach and intestinal worms I'll cancel the charge—you won't owe me one penny. Mail the coupon NOW—TODAY. Don't put off trying Sal-Vet on this liberal offer. Address—

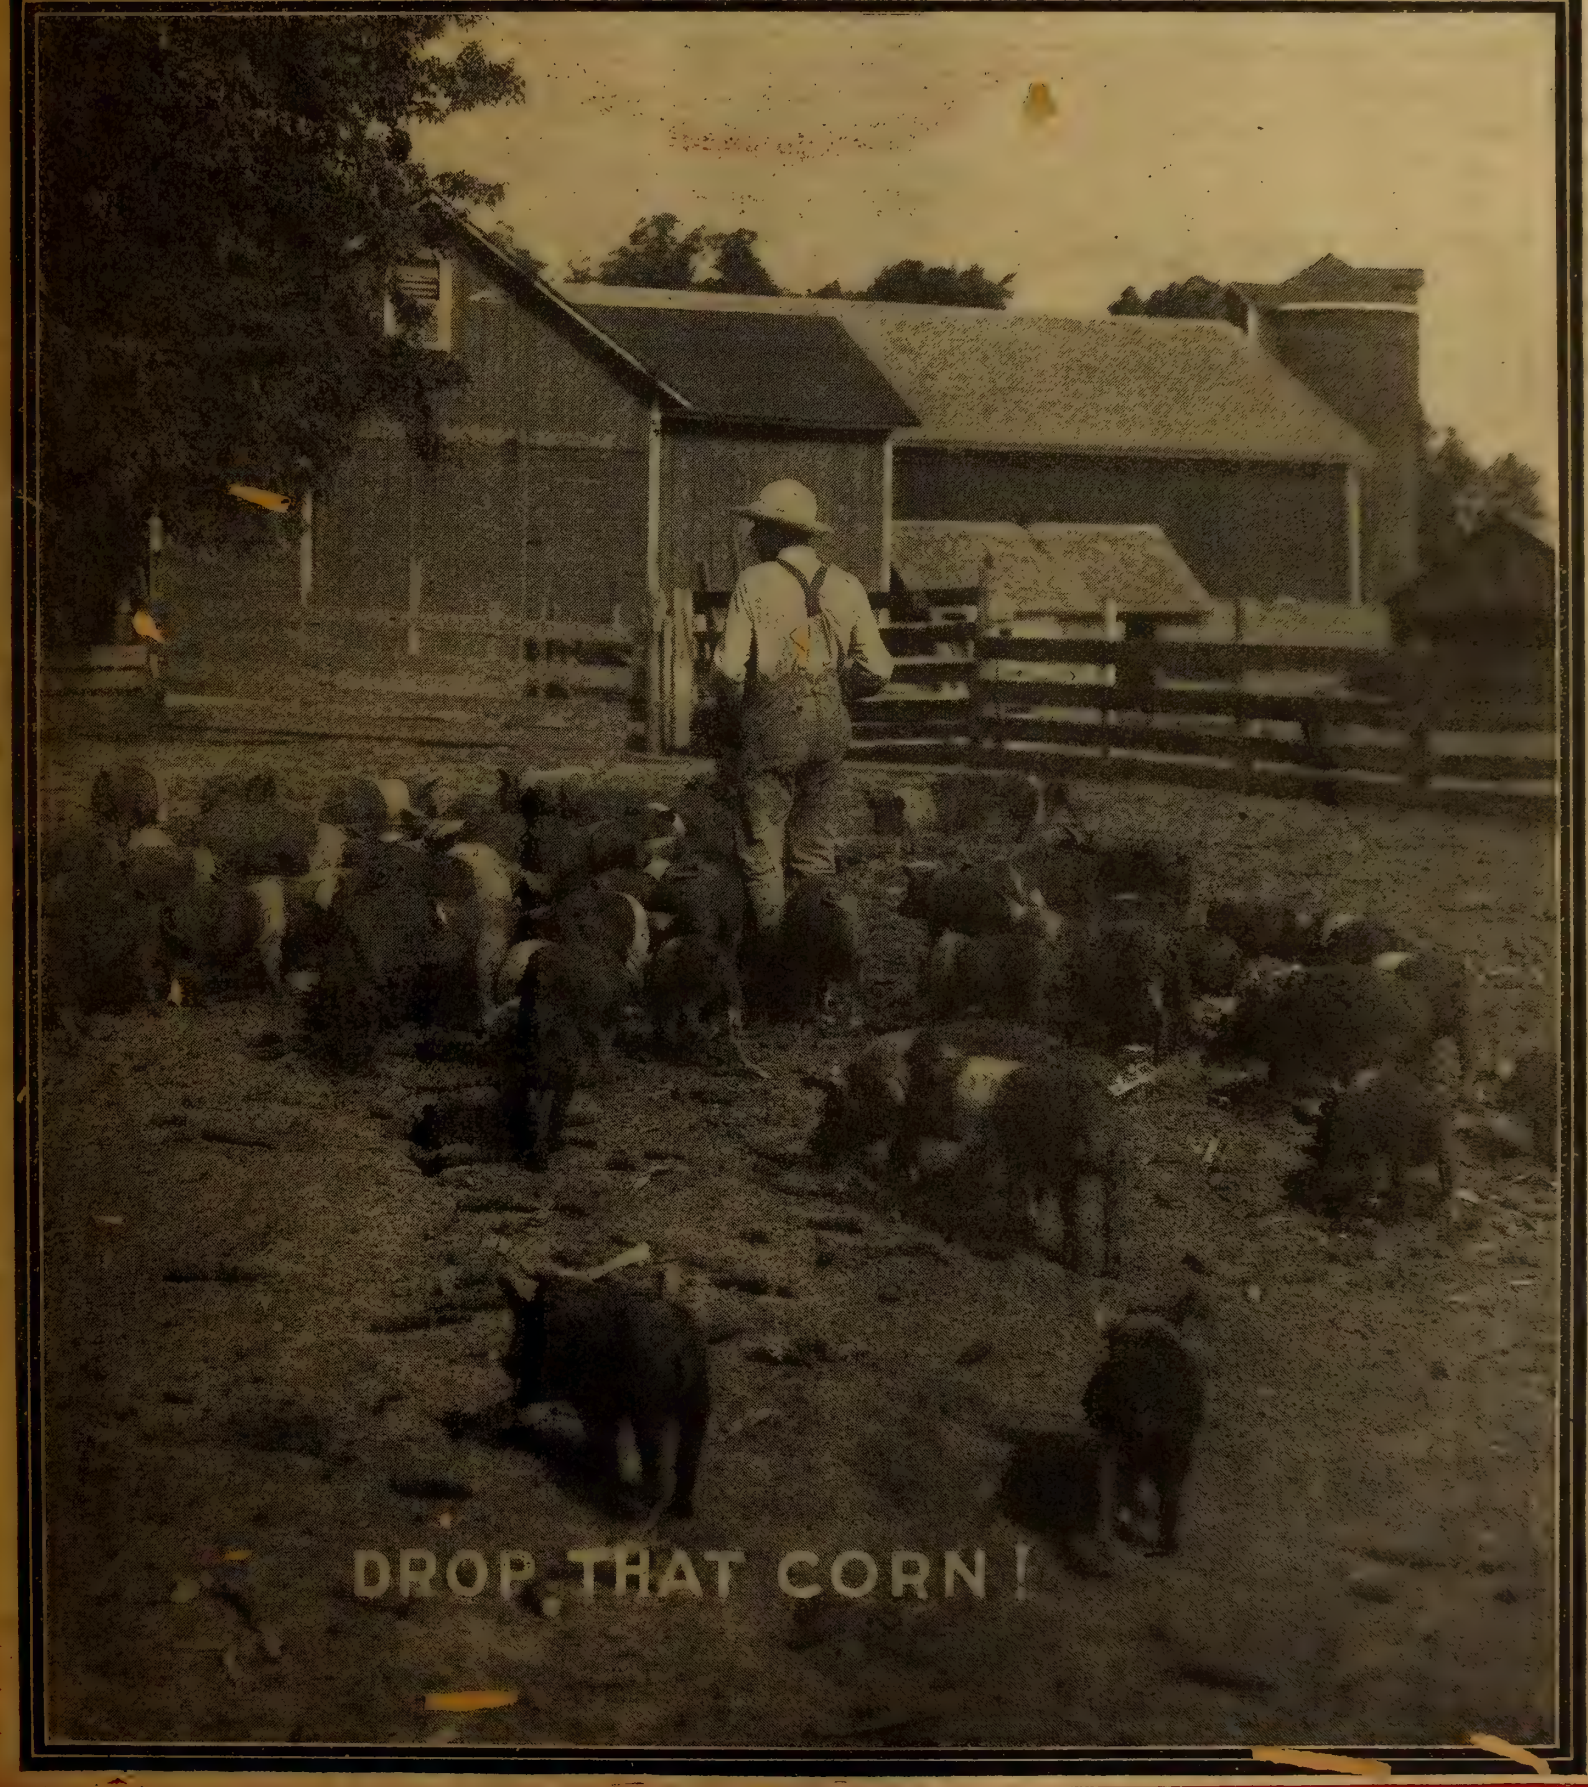
VOL. LVIII. NO. 47. DES MOINES, IOWA, NOVEMBER 20, 1913. WHOLE NO. 2928



Let a Galloway Engine Help Solve the Labor Problem on Your Farm

Try One on Your Farm 30 Days at My Risk

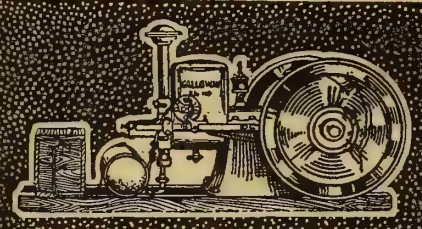
That's the best way to prove the merit of any machine. A test under actual working conditions on your own farm. That's the offer I make you on any of my engines. It's a test they have stood for years and over 30,000 Galloway customers will tell you they've made good. Listen. You and I know that the great problem on the farm today is the labor problem. It's the manufacturer's problem, too. Now, the way a manufacturer solves it is by installing up-to-date, modern machinery that will do the work of several men and in that way it's easier to get good labor. That's the only way you can solve it on the farm, by installing machines that will save a lot of time, labor and hard work, which you now do by hand or have to hire done. Isn't that a fact? All right, then you want a gasoline engine now.

Fill in Coupon Below and Mail for My New Catalog Now.

It will come the nearest to solving the labor problem for you of any machine you can buy. It will pump water, grind feed, saw wood, run the shredder, silo filler, sheller, washing machine, churn, and nearly every machine you have on the farm. It saves you time for other work. You simply can't afford to be without one. They are the cheapest help you can buy. And you want to buy the best engine that you can find on the market selling at the lowest price. That means the Galloway. No one can compete with me in price and quality, the great combination that has made my business the big success it is today. Just notice my different styles and sizes of engines shown on this page with my new, low, direct-from-factory prices. Select the engine that fits your requirements best and send for one on trial. You take no risk whatever. My engines are sold backed by a $25,000 bond. They must give you satisfaction or you can return them and I will refund your money and pay all the freight.

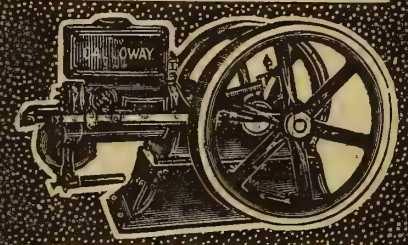
But I know they will please you as they are high quality engines, backed by a five year written guarantee in "black and white" on materials. Give the Galloway a thirty days' trial on your farm at my risk. Send for my catalog giving all the facts. Don't buy an engine of any style or make until you have first tried the Galloway.

Here! Select the Engine You Want for Your Work--Buy It at My New Low Direct-From-Factory Price.



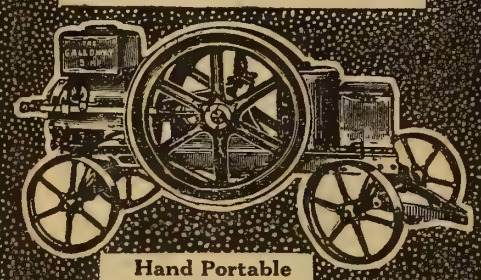
Light Duty and Pumping Engines

1¾ H. P. air cooled	$26.75
1¾ H. P. water cooled	34.75
2¼ H. P. water cooled	39.50
Small Portables $31.75, $39.75, $45.50, respectively	
Complete 2¼ H. P. Pumping outfit	44.95



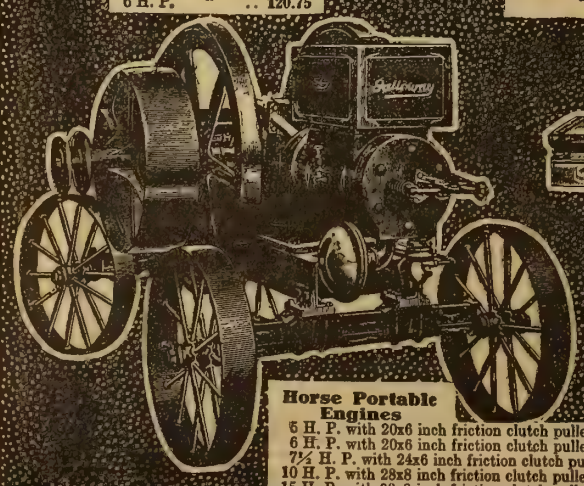
Stationary Engines

3 H. P. 8x4 inch pulley	$ 74.50
5 H. P. 16x6 inch pulley	99.50
6 H. P. 16x6 inch pulley	109.75
7½ H. P. 20x6 inch pulley	179.50
10 H. P. 24x8 inch pulley	247.50
15 H. P. 28x8 inch pulley	342.50



Hand Portable Engines

3 H. P. Complete	$ 84.50
5 H. P. "	110.50
6 H. P. "	120.75



Horse Portable Engines

5 H. P. with 20x6 inch friction clutch pulley	$142.50
6 H. P. with 20x6 inch friction clutch pulley	152.75
7½ H. P. with 24x6 inch friction clutch pulley	244.50
10 H. P. with 28x8 inch friction clutch pulley	329.50
15 H. P. with 32x8 inch friction clutch pulley	432.50

Wood Sawing Outfits Complete

5 H. P.—saw, belt, etc	$177.50
6 H. P.—saw, belt, etc	187.75
7½ H. P.—saw, belt, etc	284.50
10 H. P.—saw, belt, etc	369.50

Buy a Galloway on My Direct-From-Factory-to-Farm Plan and Save $50 to $300

Keep your money at home by buying your machines at my direct-from-factory, money-saving prices. I am saving you and the other business farmers of America over a million dollars a year. My large volume and direct-from-factory, one-profit plan of selling make my low prices possible. You have no middlemen's profits to pay; no salesmen's expenses or dealers' bad debts are tacked onto the prices of my machines. When you buy on my plan you pay only one small manufacturer's profit in addition to the actual cost of materials and labor that enter into the construction of my machines. Try my plan. Save $50 to $300 right at the start on the best gasoline engine made for your work. Galloway engines are designed especially for farm work. They are easy to start, easy to operate and the most economical engines made. They are built of the very best materials in our own modern factory by skilled mechanics. They will make good for you every time.

Complete Line of Farm Engines

Our line is complete with just the style and size engine you want for your power requirements. Light Duty and Pumping Engines for running the washing machine, churn, cream separator, pump or any other small machine on the farm. Stationary Engines 3 to 15 H. P. for equipping a power plant. Hand Portable Engines 3, 5, and 6 H. P. for running any of the medium size machines no matter where located. Horse Portable Engines 5, 6, 7½, 10 and 15 H. P. for running the heavier machines and the best equipment you can buy for doing "job work." Saw rigs, 5, 6, 7½ and 10 H. P. You can't find a more complete line of engines on the market for doing farm work. And don't forget that I can supply you at money-saving prices with a complete line of machinery such as shellers, grinders, shredders, pumps, washing machines, cream separators to be run by power. Select the engine you want and send me your trial order.

FREE Service Department

My big corps of experienced engine experts are at your service. They will help you choose the best size and style engines for your work. They will help you in equipping your power plant. They will tell you the size pulleys to use—line shafting, hangers, belting, etc., and we can supply you with this equipment at very low prices. My service department, in other words, will help you to get the most and best possible service out of the engines you buy of us. This service does not cost you one cent. It's absolutely **free.** It will save you a good many dollars in time and money. No other concern makes you this unequaled offer. It's only another good reason for your buying your engine of Galloway. Get my catalog today. Write my Service Department and give them your plans, and sizes and style of machines you want to run by power—they will do the rest.

Write Today for My Engine Catalog and Special Offer

Remember, my catalogs are my **Only Salesmen.** They are the cheapest and the best salesmen on earth, for it costs less than one-third the price of a salesman's ten cent cigar to put one right in your mail box. Get my catalogs, that's the first step. They will show you my complete line of engines and explain my simple, direct-from-factory, money-saving plan of selling. My Big Engine Book shows my complete line. My New Pumping Engine Book shows my Light Duty and Pumping Engines 1¾ and 2¼ H. P. with a lot of Combination Outfits selling at special combination prices. Get the catalog you want. I will send it **free** postage prepaid. You are under no obligation to buy. Then as a clincher I am going to make you the most liberal co-operative, profit-sharing offer you ever heard of. My offer, if you accept it, will help you get your engine partly or entirely without cost to you in the end. No canvassing, no soliciting, just a straight business proposition

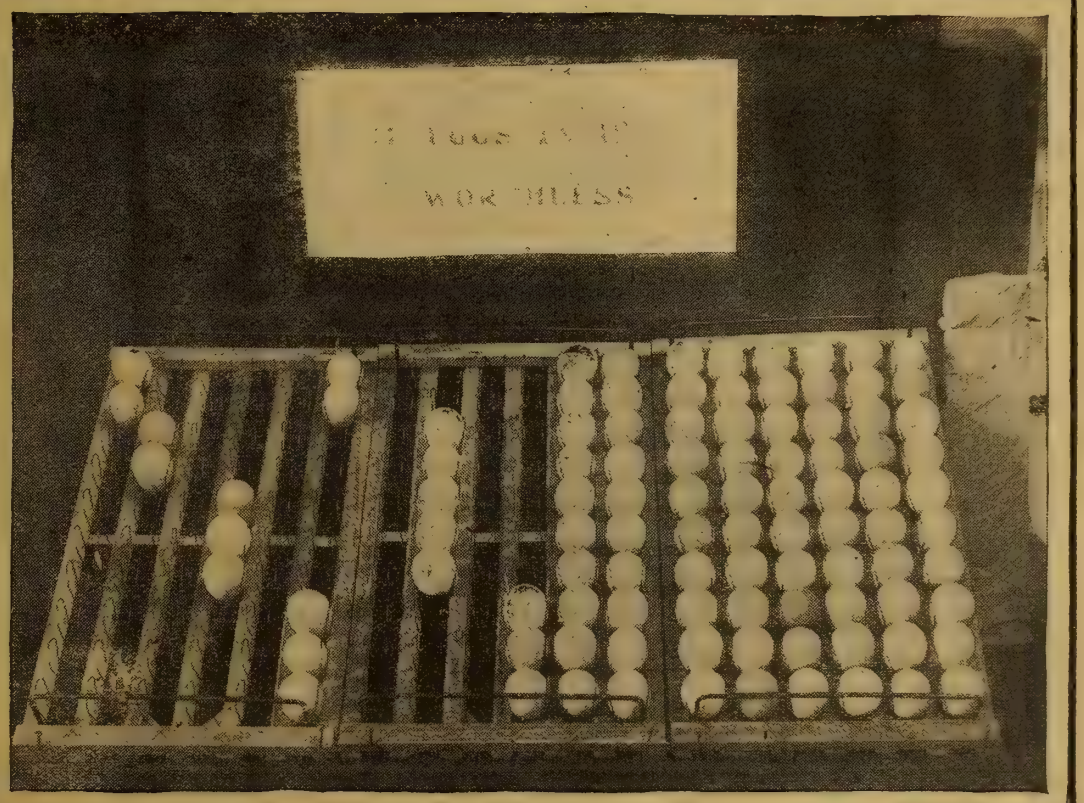
Saving $50,000,000 Loss on Eggs

Government Experts Investigate the Immense Annual Loss to Farmers and Poultry Raisers Because of Improper Handling and Marketing of Eggs.—By A. A. Coult

WITH the high cost of living affecting nearly everyone who has to buy provisions and food stuff, the United States government authorities are trying to show the farmers and poultry raisers how to conserve $50,000,000 worth of eggs which are lost to consumption each year through carelessness and indifference of poultry owners. The figures are so large that the ordinary person does not stop to consider what it means to them individually. But officials who have studied the matter estimate that Iowa poultrymen alone are responsible for about $4,000,000 of this annual loss, Illinois the same amount, while Missouri and Kansas contribute about $5,000,000 each. The big loss comes right from our own poultry yards and can be avoided by following a few simple rules suggested by ordinary common sense. Government officials estimate the loss at 17% of the total egg production.

H. L. Kempster, instructor of poultry husbandry at the University of Missouri, has arranged an exhibit showing 100 eggs separated into groups of the proper percentage of good and those which might have been good, as shown in the accompanying illustration. This exhibit was shown at the Missouri State Fair at Sedalia this year and attracted unusual attention. At the left are two cracked eggs resulting from careless handling. They should have been consumed at home. Next are two dirty eggs which are not very salable, but which are sent to market with whatever clean ones are to be sold. The dirty ones should be consumed at home. The next three are rotten. The next row contains five eggs which show chick development enough to make them a total loss. The three rots and the five containing chick development are results of fertile eggs and they might have been placed in the unfinished row of good eggs if the roosters had been separated from the hens at the close of the hatching season. The next five are "shrunken" or "held" eggs, caused by considerable of the moisture in the egg having evaporated through the shell. The remaining 83 are good, so far as the naked eye detects, but as most of them are fertile there has been considerable deterioration of quality and the quality will continue to decrease in proportion to the time the eggs are held before being consumed.



STRIKING EXHIBIT AT THE MISSOURI STATE FAIR, SHOWING SEVENTEEN OUT OF ONE HUNDRED EGGS TO BE UNFIT FOR CONSUMPTION.

The general impression prevails that the season of greatest loss on eggs marketed is during the hot summer months, but the United States government officials have found by careful tests that the largest percentage of spoiled eggs reaches the market during November. Their tests showed 8.33 per cent of rots and other total loss as compared with their own tests in the summer months of a little more than 4 per cent. This does not include those eggs which were stale, dirty, had blood rings or other sources of partial loss. The reason for this big loss in November is explained by the statement that the farmers begin to accumulate their surplus eggs in October and hold them for the Thanksgiving market. As most of the eggs are fertile and they are kept in a warm place for several weeks, the preventable loss is very heavy. These figures were made from country shipments of eggs to market and do not include any eggs held in cold storage.

As the roosters are the cause of nearly one-half of the preventable loss, or 8 per cent of the annual total loss of egg production, their elimination from the laying pens after the close of the hatching season will mean the conserving of $25,000,000 worth of produced food stuff, which now is a total loss, and a better quality in the $300,000,000 worth of shipped eggs which are consumed, for the surplus strictly fresh eggs are a very small percentage of the total.

Careful experiments have proven that hens will lay more eggs if the roosters are not allowed to run with them. In a farm flock there are always from six to twenty roosters which are continually fighting among themselves and worrying the hens. It really is cheaper in the long run for the farmers to sell or consume all of their adult male birds at the close of the hatching season and buy a few pure-bred utility males of some standard breed to mate with their hens at the beginning of the breeding season. The real loss falls on the producers, for the store-keepers, commission men, transportation companies and retailers figure on making a living and all but the transportation companies pay such prices as will enable them to sort out the bad eggs and still give them a profit on the transaction. It costs the railroad companies just as much energy and wheelage expense to haul a carload of rotten eggs from the Mississippi River to New York or Boston as a car of perfectly fresh eggs and they require transportation charges to be paid for eggs on the supposition that all are good. So that to the actual loss of millions of dollars' worth of food stuff must be added several more millions of dollars for commissions and transportation which must be made out of the 83 per cent of eggs which are able to pass muster at the distributing market.

"Swat the roosters" and buy automobiles with the present preventable loss on eggs is the cry in the campaign which is now being taken up, in such earnest, to prevent this all too large annual loss. The situation is the more important in that it affects both the producer and the consumer. Careless and improper handling prevents the farmer and poultry fancier from marketing a goodly percentage of the eggs which they could otherwise dispose of at a good figure. Cutting down the supply results in increasing the price demanded of the consumer, so that the evil is doubly felt.

It is highly probable that the campaign which has begun thus effectively in Missouri will spread to other grain-belt states. Exhibits similar to the one pictured herewith might well be made at all the state fairs. The public is more easily impressed with such a striking object lesson than with many exhaustive bulletins and articles. The Missouri exhibit forced home to the attention of the farmers of that state the money which they are losing every year, largely through their own carelessness. It is a safe guess that when they returned home from Sedalia, having inspected this exhibit made by Professor Kempster, they did so with the determination of cutting down the leakage in the farm income and seeing to it that the percentage of eggs marketed was a full 100. It is simply another illustration of the practical value of the state fair. These annual exhibitions cost immense sums of money, but they are second only to the agricultural colleges and the agricultural press in their educational value.

THE HORSE THAT FINDS READY SALE.

We doubt if there is any plan by which the actual value of animals can be more accurately determined than that of putting them under the auctioneer's hammer. With that system merit is very quickly determined and mediocre stuff most surely seeks its level in values. A Kansas subscriber gives his observations that were made recently at a horse sale in eastern Kansas, the results of this sale leading him to the conclusion that the draft horse has not yet been injured by the introduction of the automobile while the road horse has been greatly cheapened. Among other things he says:

I recently attended a county horse sale, held at the county seat of an eastern Kansas county. These sales are a regular thing during the fall and winter season, two sales being held each month. They have become very popular with the people who have horses to sell or wish to buy horses. Popularity is due to the fair and square manner in which the sales are conducted. Each horse sold is tagged with a number, and as the animal is led into the sale ring the clerk calls his number and tells the age and every defect of the animal. The purchaser thus buys with a knowledge of what the horse is, and should the horse prove otherwise it may be returned before the next sale date and the purchase price refunded. This means practically a two-weeks' trial of the animal. In fair weather these sales are held in a large outside enclosure and on stormy days inside a large sale barn, so the sale is held on advertised dates, regardless of weather. Buyers come from the cities and surrounding towns, as well as from the farms, to attend these sales, and there is always a good crowd of both buyers and sellers.

It was a fine day when the writer of this attended one of these sales. The sale began at two o'clock in the afternoon and between sixty and seventy horses were sold before evening. No time was lost in getting another animal in the ring after one was sold, so there was no drag to the sale. Horses sold considerably cheaper that day than they had been selling at sales before, but the quality of the stuff offered averaged poorer. All good horses sold brought good prices. By good horses, we soon found the crowd meant draft animals, not road stock, no matter how good in quality such animals might have been. We saw fancy driving horses sell below $100 that would easily have brought $150 or close to $200 before the general advent of the cheaper auto. We heard many a farmer say he was not wanting road horses, as a cheap to medium priced auto cost much less to keep than the driving team, and was much faster and could travel further, besides.

All good draft horses sold well, no doubt not as well as they will sell nearer spring, but decidedly well in contrast to the light weight road animal and the inferior animal that was neither a road or a draft animal. Any farmer, wishing to raise horses for future markets, could have received a valuable lesson by attending this one sale, a lesson that would tell him to leave everything alone except the best draft stock if he would produce what the buyer demands and for which he is willing to pay the high price.

What happened at this sale is typical of what might be learned in every state of the corn belt if an attempt were made to learn values of the different types of horses. So long as the industries of the country are carried along under normal conditions and while farming operations call for so large a number of good work horses there can possibly be no risk in counting on the drafter as a money-maker in the future. The auto truck as used in the large cities must of necessity be limited to certain tasks, particularly to where hauls are of great length, but for short work the draft horse is more economical and must of necessity be as long as the cost of maintaining an auto truck remains anywhere near its present level. Those who are owners of good draft mares have as fair a prospect for realizing good profits if these are used for breeding purposes as has been the case any time during the last quarter of a century.

PROGRAM OF INTERNATIONAL LIVESTOCK EXPOSITION.

Unless there is a large attendance at the coming International Livestock Exposition which will be held in Chicago from November 29th to December 6th, the project can be considered only a half-hearted success. This is an exposition that has been built up at an enormous cost. Premiums won there are more valuable than those offered by any other similar institution and this means that the best breeders of livestock in the country are there with their herds year after year. This year will be no exception. An educational program that excels all past records has been prepared and the entries that already have been made insure full classes.

On Saturday, November 29th, the students from the various agricultural colleges will have their innings, competing with one another in the judging of horses, cattle, sheep and swine.

On Monday, December 1st, at nine o'clock the judging program begins and the pure bred and grade steer classes will be passed on as well as the college and experiment station stock. In addition the barrows will be judged in the swine department, while in the horse division Belgian stallions will be judged and the draft geldings in harness.

On Tuesday, December 2d, the judging of the Short-horn and Red Polled classes will begin, while on that date the ribbons will be tied on the car-load fat classes and on the short-fed special car-load lots. There will be sheep and swine judging on this date as well, including the Shropshire, Dorset and Cotswold classes in the former and Berkshire and Chester Whites in the latter. In the horse division Percheron judging will begin and draft geldings in harness completed.

On Wednesday, December 3d, the Short-horn and Red Polled breeding classes will be concluded and a beginning will be made in the judging of Hereford cattle. The Clydesdales will be judged on this date and the three-horse draft teams. In the sheep classes the Hampshires, Cheviots and Southdowns will be passed upon while Poland China and Hampshire hogs will have their innings.

On Thursday, December 4th, the Hereford breeding classes will be concluded and the judging in the Aberdeen Angus and Galloway classes started. On this date Shire horses will be judged and four-horse teams in harness. In the sheep department the Oxford Downs, Lincolns and Rambouillets will be judged, it being Duroc Jersey and Yorkshire day in the swine classes.

On Friday, December 5th, the judging in the Galloway and Aberdeen classes will be finished and the Polled Durhams also completed. In the horse department Suffolk, Hackney and French Coaches will be judged while in the sheep division attention will be given to the Leicester, Romneys and Exmoor horned breed. Tamworth hogs will also be judged on this date.

Our purpose in outlining this program of events is to furnish our readers with definite information in order that they may visit the exposition at a time that will afford them the best possible opportunity to acquire information along the line in which they have a special interest.

We would like to repeat that the coming exposition is likely to eclipse all its former records and for that reason no up-to-date stockman can afford to miss it.

SOME SENSIBLE DISINFECTION METHODS.

As the season approaches for stabling livestock due consideration must be given the perplexing problem of keeping disease in check. There is need for the dissemination of more information concerning what might be called the germicidal power of various substances known as disinfectants. In applying methods of disinfection we are fighting bacterial life and therefore must use agents that are as destructive to that form of life as poisonous drugs would be to the higher animals.

Formalin may be used to very great advantage in disinfecting mangers and troughs. Six ounces of formalin to one gallon of water will give a resultant mixture of proper strength. Even in the case of the healthy herd it is a wise precaution if at intervals the mangers are given a good soaking with a mixture of this kind.

Then, of course, among the disinfectants carbolic acid must be included. A 5-per-cent solution is strong enough for ordinary purposes. It is possibly a little expensive if used in anything like large quantities, but where disease of any kind has broken out the cost of even a disinfectant of this kind is a small matter compared with the price of carelessness in case no attempt whatever is made to disinfect.

Then there are the coal-tar products with which farmers in general are familiar. After all, these products serve a most important purpose because under ordinary conditions they are not poisonous, they are not irritating to the skin of animals if rightly used and when used in their proper strength they have powerful germicidal properties. They are exceedingly well adapted to that form of disinfection that necessitates the application of a germicidal agent to the walls and stalls of stables and to the interior of sheds. These products are comparatively inexpensive because one part of the coal tar mixture is usually strong enough to be diluted with thirty of forty parts of water. The free use of any of the disinfectants that we have mentioned and particularly those of the so-called coal-tar families will contribute very materially to healthfulness of the herd.

It would be a blunder if while enumerating a few of the more important disinfectants sunlight were omitted. Where it is at all possible this effective agency should be used to the limit and that is why men are more and more remodeling their old stables, doubling in many cases, and even tripling in some instances, the window space that was formerly used. These germs cannot flourish in sunlight and for this reason one can well afford to go to some expense to lighten stables, pens and sheds.

FARM HEALTH.

A great deal is heard about a balanced ration for stock, but all too little is heard about a balanced ration for human beings. A specialist in the bureau of plant industry at Washington declares that the balanced ration of most Americans is something like this: Bread, butter, eggs, patent medicine, laxatives, meat and fish, potatoes. He recommends that this menu be changed to read as follows: Bread, butter, fruit, vegetables, greens, meat, fish, eggs.

The plea of this specialist is for the consumption of more fruit on the farm, in order to keep the doctor away. He is arguing in favor of canning clubs, similar to those which flourish so extensively among the girls of the South, while the farm boys have their corn clubs. He recommends that every family provide a diet of fruit and vegetables for every day in the year and in order to bring this about he urges the canning of more fruit and vegetables right where they are grown. His plea is as follows:

If every home kept on hand enough canned products so that there might be a can of fruits, a can of greens and a can of vegetables for every day of the winter, there would be little need for the laxatives now so regularly bought from the town drug store. There would also be great economy in the substitution of an inexpensive food for more expensive ones. More home canning, done at the proper season, would enable the average family always to have the proper quantity of canned products, and would save an astonishing amount of food that goes to waste every year. It is estimated that more than 50 per cent of all the vegetables, greens, fruits and berries that grow in this country go to waste and are actually lost to those who need them. That is simply because housewives have not learned to care for these surplus products efficiently and to make them available for the winter months by canning.

It is of interest to note that already one of the big railroad systems has built and equipped a model canning demonstration car which it sends out over its lines teaching the housewives how to can the surplus products of the farm. There is little or no ulterior motive in this work, because the great bulk of such canned goods is intended for home consumption and is not to be shipped to market. If a big railroad corporation finds it profitable to take enough interest in the farmers along its route to urge them to can fruits and vegetables for home consumption, it certainly behooves every farmer to study this important question of a balanced ration for himself and all his household so that health may be conserved and the visits of the doctor made few and far between.

PLOWING UNDER ROUGHNESS.

A subscriber, Mr. I. H. Canaday, briefly outlines his plan of maintaining a supply of vegetable matter in the soil. After removing a small grain crop Mr. Canaday sows a crop of sorghum and just before the period of frost the sorghum is turned under with a weed hook or chain, the plowing being done to a depth of at least eight inches. As the result of a long experience this subscriber finds that in a dry season land handled this way is much more productive than similar land where the stubble has simply been plowed under and no attempt is made to increase the supply of vegetable matter. Furthermore, in the case of a wet season the effect of the grain crop that is plowed under is to drain the surface soil and thereby increase the crop yield over and above what it would be under the ordinary method of handling soils.

This subscriber's faith in the plan that has worked out so well for him is not wholly based on the fact that it leads to increased productiveness, but in addition he calls attention to the efficacy of the method in freeing soils from weeds. Where the system is carried out year after year it works havoc not only with annual, but also with perennial weeds.

HUSKIN' TIME

YOU may talk of jolly April and of May time in the trees,
With the buds a burstin' open, and the little honey bees
Wadin' ankle deep in sweetness and a-singin' up above
Where the breezes are a-blowin' and a-whisperin' o' love,
But there's somethin' more appealin' in the rustle and the chime
When the katydids and crickets are a-callin' "Huskin' time!"

There's the labyrinthine summer with its blooms a-runnin' wild,
And the brooks a-laughin', laughin' like a happy little child,
And you think it 'most completeness, but it isn't after all,
For there's somethin' more appealin' in the rustle of the fall,
When the katydids and crickets in the pastures are a-chime
With the sweet content of Heaven and you know it's "Huskin' time!"

O the harvesters are happy with their brown arms full o' sheaves!
And there's somethin' in the color of the corn that interweaves
With the hazy hangin' distance, that no poet has exprest,
It's a sense of satisfaction like the blessed boon of rest;
And there's somethin' most appealin' in the rustle and the chime
When the katydids and crickets are a-callin' "Huskin' time!"

—Herbert Randall in Hartford Courant

James M. Pierce

THE PUBLISHER'S VIEWS ON TOPICS of THE TIME

THE LESSON OF THANKSGIVING DAY.

BACK in the days when the writing class in the country school toiled laboriously—every little writer with his tongue protruding from between his lips and his fingers well smeared with ink—to copy the Spencerian line across the top of the page, there was a copy-book motto to the effect that "Every cloud has a silver lining." It has taken me sixty years to realize the truth of every stroke and letter of this precept. Now, as another Thanksgiving Day approaches, and I take time to look back upon the year which has elapsed since the last day of national thankfulness, I can see, in memory, all the clouds that obscured the sun for many and many a day, but shining through them all, I can see, in actuality, the silver lining.

It is a good thing for all of us, once a year, at least, to stop and take stock. We are so busy making a living, sending the children to school, paying off the mortgage, buying new land—struggling toward some goal—that we are likely to become thoughtless, puffed up with our own greatness or cast down under what seems to be a crushing load of misery. But once a year the president turns away from the cares of state long enough to call to us to knock off work for a day and be thankful. The governor of every state echoes the call, and you and I heed it by celebrating Thanksgiving in various and sundry ways. The way in which we should all celebrate it is at home, around the family table well laden with good things to eat, rejoicing over the prosperity of the past, the pleasant prospect of the future, and the many and manifold blessings which far outweigh the trials and troubles.

"But," you say, "there isn't as much to be thankful for this year as usual. Our fields were burned out; our herds were cut down by disease; we have had sickness and trouble." You're alive, aren't you? You're well and strong, aren't you? You're surrounded by loved ones, aren't you? You have your home, your family, your friends, your hopes, haven't you? Well, what else do you need?

If I were the least bit inclined to be superstitious (which I'm not) I could sit back and wail whole volumes of lamentations because 1913 was a bad year with me personally. Let me give you a few personal, intimate facts. The year had hardly started before my publishing plant burned down, on a cold, bleak, barren winter morning, with the thermometer registering zero. With members of my family beside me, I stood in the street and watched the work of many years disappear before the ravenous flames. A sorry start for the year, wasn't it? But that was not all. The year was not half run before the Angel of Death entered the house of my oldest son and took from it my little four-year-old grandson, named in my honor, of whom we had fondly dreamed that some day he would carry on the work and perhaps do the things which I had found impossible. Still a bad year, wasn't it? But that was not all. Sickness came to other members of my household, as though the year were determined to beat me down. And yet, in the face of all this, I can truthfully say that 1913 has been one of the best years of my life; that I am, in truth and in fact, sincerely thankful.

You ask me why I am thankful. Because every trouble and every sorrow has brought me the inspiring, consoling cheer of scores, yes, of hundreds of friends; because I have learned that behind every scourge there is some plan, behind every grief some solace. The building which was burned has been repaired. Moreover, although repaired, it is to be replaced as a permanent home for my business interests, by a fine new structure, already under construction in the finest part of the city, with four times the space of the present building. I have learned, by experience, to build upon misfortunes. Having seen my business destroyed by fire twice, and the third time saved only as by a miracle, I have each time builded newer, better and larger buildings and thus grown with disaster and triumphed over adversity. For all this, I am indeed truly thankful.

The grandson who is gone has left a sweet heritage of memories; those who were sick are now recovered, and so on and on. Once we take stock of the situation, there is not a cloud without a silver lining; there is not a trouble or grief without its friendship. It means something when a friend grips you by the hand or lays his arm comfortingly over your shoulders. Next to the loved ones of our own immediate family, what surpasses a friend?

I thank Thee that as yet I need not know,
Yet need not fear, the mystery of the End;
But, more than all, and though all these should go—
Dear Lord, this on my knees!—I thank Thee for my friend.

Now isn't it the same with all of you? Hasn't every cloud of 1913 a silver lining? It was not so very many weeks ago that my mail was cumbered with letters from subscribers in the Southwest saying their corn crop was burned out, they were ruined. Yet the banks of the Southwest have more money on deposit today than ever before and the corn crop of the nation exceeds in value, by $200,000,000, the record-breaking corn crop of last year. And the very farmers who were writing in, lamenting that their corn was burning up, were the ones who were raising twenty, thirty and even thirty-five bushels of wheat to the acre, making this year's wheat crop surpass that of last year by 25,000,000 bushels. There's silver linings for you a-plenty.

I came across "a prayer of the West" in my newspaper reading recently. It was printed in a daily newspaper published in the part of the country which talked last summer of hard times and drouth, but which was never so prosperous as just now. Here is the prayer:

For the bounties of nature, for the full, rich verdure, token of the grateful rains after the parching summer, for well-stocked granaries, for the cattle of the boundless plains, for comfortable homes—for all that abundant welfare that makes possible the spiritual ideals of a nobler life;

For the season of burning drouth, for its scorching days and stifling nights, putting all our resources to the test, training us in the stern school of adversity, teaching us our weakness, sobering us, steadying us, enlarging our sympathies, making us realize our dependence on each other and on our Creator, giving us self reliance, developing those great traits which helped our ancestors conquer the wilderness;

For these, and all thy untold mercies, O Lord, make us truly thankful!

Can't every one of us, simply changing the words to suit our individual position and condition, join in such rejoicing, such thanksgiving, "for these and all Thy untold mercies?"

A GRATIFYING SIGN.

IT IS inevitable that among the farmers of the grain belt there should be differences of political opinion. We all look at things from different angles; we see things in different lights. It is altogether wrong to assume that any one political party has a monopoly on all the honest, conscientious voters. Some of my most intimate personal friends do not see things as I do; they are not in the habit of voting as I do. Am I, therefore, to assume that they are dishonest? Assuredly not. They are earnest and conscientious in their views. I believe them to be misguided, but I know them to be honest and high-minded.

But, differ as we may on the principles and leaders of the day, do we not all agree on certain fundamentals of right and wrong, precepts which are not confined to, or monopolized by, any one party? And is not one of these underlying principles, upon which all upright men of whatever party earnestly agree, just this: Successful government depends upon the consent of the governed? If this is so, is it not a sign of reform, in which we may all rejoice, that one of the great political parties is proposing so to change its manner of conducting business as to make the rank and file of the people the real arbiters, rather than any mere coterie or clique of leaders?

We may be republicans, democrats, progressives or what we will; the majority of us, I am sure, feel that the republican party is taking a step forward when it proposes a special national convention to determine how the manner of electing and seating delegates shall be changed so as to be absolutely fair to all sections of the country and prevent a repetition of the charges and countercharges, the confusion and the scandal which marked the last national convention. It is the lesson of history that minority parties play a great and important part in the success of any government. There must be the constant reminder, the fear, if need be, of the possibility of the minority party assuming the reins of government, to compel the powers-that-be to keep their pledges and serve the people faithfully. We have not yet reached that millennium where government would succeed if there were but one party, without a minority to spur the majority into action and to threaten defeat. The republican party is now the minority party; nevertheless, it should have a great and far-reaching mission to perform. Who knows but it may again assume the major position, within a short time? Who can doubt that if it is to deserve this honor, and maintain it, there must be harmony of action, true democracy both of spirit and of execution?

The cause of the republican downfall last year was more a matter of methods than of men. The custom that has prevailed for many years was to permit the small, ignorant colored vote of the South to control the republican national convention in the choice of candidates. Thus the vote of a single ignorant, shiftless negro of the levees of Louisiana or the cotton fields of Mississippi had more to do with the nomination of a republican presidential candidate in this great country of ours than had the votes of forty intelligent grain-belt farmers. The injustice was flagrant, yet it was permitted long to continue. The spectacle which we have all seen, since the reconstruction period immediately following the civil war—the presidential incumbent coming into a republican national convention with the votes of the solid South behind him, these votes being mainly of two classes, the ignorant negro and the office-holding carpetbagger—has always been revolting, for it has put to a most unfair disadvantage the millions of intelligent, patriotic republican farmers of the grain belt who have thus found themselves practically shut out in the selection of presidential candidates by a horde of ignorant blacks and corrupt whites.

If now all who are conscientious and patriotic republicans at heart will see to it that the republican national convention hereafter is controlled by men who are in favor of every state having its just share and voice, according to the votes cast for the head of the ticket at the last presidential election, one of the main reasons for the party's downfall will have been removed. This is not politics; it is not partisanship; it is common sense; it is patriotic interest in the welfare of the nation.

When this reform has been brought about we shall be moving toward a higher political level for all parties and thus the fundamental ideals upon which this country was founded shall be realized, so that we may all (republicans, democrats, progressives, or whatever the name we rally under) take a hand in bringing the nation up to that plane where it will, in truth and in fact, be an inspiration to all the nations of the world.

THE OVERWORKED FARM WOMAN.

I SHALL never forget the sympathy which welled up in my heart when I read of the poor, tired country woman who was so unfeelingly referred to by a certain member of the Roosevelt Country Life Commission because she did not feed him as well as he was used to, when he dropped in on her unexpectedly. Perhaps you remember the instance, for it attracted a good deal of attention. The country life commissioner lives in the city; he knows little or nothing of successful farm work through personal experience; in his journeys around the country, while serving on the commission, he was accustomed to being banqueted in various towns and cities, after which it was the plan to return home and write a report on country-life conditions. But before he returned, he wanted the experience of at least one meal on the farm. So he dropped in, quite unexpectedly, on a farm where the tired wife had a family of nine to look after, two of them very old men and the youngest a delicate, sickly baby, with the washing, ironing and baking to attend to by herself, unassisted. When the commissioner found himself served with the ordinary food to which the family was long accustomed he was incensed and wrote a report which was so unfeeling and so unfair that President Roosevelt himself wrote a letter of sympathy to the poor, tired, struggling farm wife. If ever President Roosevelt did a thing which showed him in touch with the rank and file of the common people it was when he turned away from the cares of state long enough to console that woman for the way one of his appointees had referred to her.

Now I see that the new secretary of agriculture, Mr. Houston, is making an investigation of farm home conditions, asking practical suggestions from 50,000 farm women. He is proceeding along right lines. What's to be gained, so far as the poor, tired, overworked farm woman is concerned, by sending a lot of city men and impractical farmers around the country in a commission, to make fun of the ordinary farm food and publish a report which not one farmer in ten thousand has ever seen? How much more effective to have the farm women themselves tell their experiences, in heart-to-heart letters, and give suggestions on how their work may be made easier! For instance, there is the letter from a farm woman in a grain-belt state, who says:

We have carried water for 200 yards for all household purposes for two generations in our family. This fall a matured life insurance policy makes it possible for us to install a modern water supply in our house and we intend to use the money for that purpose.

Now all the department of agriculture has to do is to give that woman practical advice on how to install a water system economically and efficiently; then publish the records of this case for the guidance of others. Isn't that sensible? Isn't that praiseworthy?

I can remember, as vividly as though it were but yesterday, the grain-belt farm to which I came when I left my native state, at nineteen years of age. The water supply was far removed and inadequate, so that many a time I have had to hitch up to the sled and drive to the nearest slough for a barrel of water for home use. That hard work put me in a position to sympathize with the thousands upon thousands of farm women who are drudging with heavy buckets, car-

rying the water a long distance perhaps, the weight taking the spring out of their steps and making them prematurely old, when a water-under-pressure system could be installed with the earnings of a few flocks of hens for a single year. The trouble is they don't know how to go about it.

It's been a case of improving crops and increasing beef yield; but now we're going to improve human life, and particularly women's lives, on the farms.

That's the declaration of the new secretary of agriculture, Mr. Houston. Rings true, doesn't it? If he only lives up to his expectations, he will have done a great and good work, far eclipsing the more spectacular efforts of his predecessor.

What is more important than making easy the life of the farm woman? She is becoming old ahead of her time; there are gray hairs where there should be only brown or black; wrinkles where the cheeks should be smooth; a pallor where there should be the rosy flush of health. And yet, she is rearing the boys and girls who are the foundation of our real democracy, our real prosperity. Give the farm woman a chance, I say; pay more attention to her welfare, her comfort, her happiness; put a little more of the courting period sentiment into our consideration of her daily work. It will mean a new era in farming, an era of sympathy and efficiency when such instances as the one which ruffled the sensibilities of the country life commissioner can never, never occur.

James M. Prince

PREFERS SANITARY METHODS TO SERUM.

In a recent communication to the Des Moines Register and Leader, Mr. D. A. Kent calls attention to the great need that exists for improving the sanitary surroundings of hogs. Among other things Mr. Kent says:

However commendable may be the efforts of the state and the general government in attempting to stamp out hog cholera, it must be admitted that prevention is better than cure. A river of serum accompanied with all the other medical agencies, will not save the hog until better sanitation of the food, the drink, the feed lot, the pasture and the sleeping sheds is enforced. There is not an animal on the earth, except those rendered immune by nature, that would not die off like flies, if herded and fed and sheltered in the filthy conditions surrounding the life of the hog. Man himself has always been stricken with some fatal disease when crowded and fed in filth. Colonel Georgas cleaned up the canal zone and made it possible for Colonel Goethals to complete the building of the canal, but if the government had sent a serum doctor down to Panama instead of an order to clean out the miasmatic conditions of the canal zone, we doubt whether Colonel Goethals would have been able to have built the canal, because, until the proper sanitary conditions were in force there was one laborer dying each year out of each four employed, and such mortality would probably have forbidden the continuance of the work.

The hog is the most vigorous of all our domestic animals. He can stand more abuse and neglect than any other animal on the farm and still pile up the largest bank account. Give him half a chance and he will get there. But the trouble is he does not even get the half chance. There are scores of farmers chasing over the country in $1,500 automobiles and at the same time trying to raise 200 hogs in a $40 hog house.

We must turn from medicine to better feed and care before we can hope to save the hog. Pure air, pure feed, pure water, a balanced ration, wisely fed and clean, comfortable sleeping sheds will settle the question. Of all the recent programs of education in agriculture none would be so valuable as persistent efforts to point out the errors in hog raising. Whoever will do it will overtake even Holden in notoriety.

We are producing about one hog to every acre of corn that is produced in our state. We ought to produce two. That is instead of producing 10,000,000 hogs we should produce 20,000,000, making two hogs grow where only one grew before. A little more brains and a little more energy will do it.

Unquestionably, there is urgent need for introducing more sanitary methods in handling hogs. This paper has always been strongly in favor of the individual hog-house system for the simple reason that with this plan overcrowding may easily be avoided. Where a number of individual hog houses are used they may be placed in the yards during the late fall and winter there to furnish ideal sleeping quarters for fattening pigs. In this case instead of employing a system whereby large numbers are compelled to sleep in one building they will divide themselves up in small groups and thereby live at least the nighttime of their lives under a much more healthy condition.

Every swine breeder will concede the soundness of Mr. Kent's argument because serum alone will not improve the constitutional powers of our swine population and that after all is the end for which we should work.

PROSPECTIVE STOCK CATTLE PRICES.

Stock cattle prices have declined 50 to 75 cents since the middle of October. With the marked falling off in receipts of range cattle at the markets a week or two ago there was a slight reaction towards strength, but the natural course of the market on stock cattle at this time is downward, and the slight advances will probably be more than offset by the influence of the slackening demand for thin cattle. A dealer in stock cattle and feeders at Kansas City recently gave his opinion, based on fifteen years of close observation of the market at the stock yards there.

Broadly speaking, December is the best month in the whole year to buy stock cattle, according to this expert. Most people become saturated with the holiday spirit in December, which has been given a start by the Thanksgiving holiday, and which is increased as the Christmas and New Year's festivities approach. Those parties who want stock cattle to run through the winter, as well as the majority of people, lose their keen zest for business, and procrastinate. They say, "Wait-till after the holidays." As a result, the market quiets down, and average of prices is relatively low.

After the holidays the market on stock cattle invariably advances, either the first or the second week in January. In fifteen years we have never seen it fail to gain 25 to 75 cents per hundredweight on stock cattle. Why? Because all the parties who have been putting off buying settle down to business the first of the new year, and hurry to get their cattle. The increased demand raises the price.

Another thing in favor of December buying is the fact that stock cattle are then down to bed rock as regards superfluous flesh. They do not carry a pound of washy material, which is usually lost in the transition from the range surroundings to corn-belt environment. They have been getting down to this point since the first frost. In December a man can buy his cattle to match his feed, with minimum loss in getting them accustomed to the new diet. They are in shape to go right ahead, having already touched bottom. This point, of course, also applies to January.

Someone says, "It might pay to give a little more in January." True, but the advance in price is always more than the value of the feed consumed in the meantime amounts to. Even if the program calls for very heavy feeding, there is a month's time gained in getting cattle to going right, December as against January buying.

BROADENING THE INFLUENCE OF FAIRS.

A six months' performance test has been inaugurated by the board of management of the Minnesota Agricultural Society in recognition of the importance which is attached to the dairy cow as an important factor in Minnesota agriculture. The sum of $500 will be divided into eight prizes and the premiums will be awarded at the Minnesota fair in 1914.

Those who enter cows in this contest will be supervised by the dairy division of the University of Minnesota and the six months' test may begin any time after the first of November, 1913, so long as it is completed by August 1, 1914. The individual conformation of the cow will be taken into consideration in determining the winners in addition to the net value of the butter fat and skim milk produced in the six months' test. The competition will be confined to registered cows two years old or over, owned and kept in the state of Minnesota during the period covered by the test. One condition of this contest is that the cows must be exhibited at the Minnesota State Fair next year.

The carrying out of this plan shows the possibility of extending the educational influence of the state fair. By making the test cover a period of six months artificial forcing in feeding methods can be entirely eliminated. It can be well understood that when cows are placed on exhibition next fall with their records in placard form staring visitors in the face it will impress in a new way the minds of those interested as to the real relation of dairy type and actual performance.

Congratulations are due to the Minnesota board because they have exhibited real foresight in mapping out this new educational feature.

BLACKHEART IN POTATOES.

It has recently been announced that a Wisconsin scientist, Prof. E. T. Bartholomew, has discovered the cause of blackheart in potatoes. This is the disease which causes the interior of potatoes to become blackened and in many cases to become hollow. This disease has always been thought to result from a fungous growth of some kind or other, but Professor Bartholomew has exploded this theory.

This scientist has discovered that when potatoes are closely packed in cars and an open space is allowed in the center for a heating stove the artificial heat is apt to cause blackheart. The matter has been thoroughly investigated before making this announcement, as twelve varieties of potatoes have been used in the experiment. It has been found that the keeping of potatoes in a temperature of from 100 to 104 degrees for a period of eighteen to twenty hours will result in great injury to them on account of the discoloration of the heart. It has been found that blackheart will appear not only when artificial heat is applied, but also if potatoes are allowed to overheat when too deeply covered in pits or when they are stored in warm cellars.

We regard this as an important scientific discovery and it not only relates to potatoes injured in transit, but also that part of the crop that is taken directly from the cellar to the kitchen. The disease at present causes an enormous waste, saying nothing of the inconvenience that results when blackheart is discovered after the tuber appears on the table.

The lesson to be learned from Professor Bartholomew's discovery is simply this, that under no circumstances should potatoes ever be subjected to a high temperature.

POULTRY ARE FREE COMMONERS.

There have possibly been more feelings lacerated as the result of poultry depredations on farms and gardens of the corn belt than from all other causes combined. According to a recent decision of the Iowa Supreme Court this laceration will continue because this honorable body has decided that poultry are "free commoners" and that it is therefore not incumbent upon the owner of poultry to restrain the flock. Reduced to its simplest terms this means that your neighbor's poultry are welcome to trespass in your garden, around your feed lots and to enjoy themselves to the limit in newly sown grain fields or among the ripening cereals.

The question, which was appealed from the district court, involved injury to a certain grain field resulting from the free range of a large flock of poultry, thereby making it necessary to sow the grain two or three times, incurring in this case, an actual loss. According to the decision of the highest court no damages can be collected by the injured party and the lesson to be learned from the opinion rendered is simply this, that your neighbor is the one on whom falls the burden and expense of building poultry-restraining fences if he does not want your poultry in his yards, feed lots or fields.

Statistics for the season show that in Scotland at the present time there are 6,798,807 sheep, which is a decrease of nearly 3 per cent from the previous year's numbers. In view of this decrease, there seems to be a steady rise of prices.

SILO AND ENSILAGE EXPERIENCE.

The following communication has been received from an Ohio subscriber, Mr. I. G. Shellabarger:

Silos are becoming more and more conspicuous each year and more of them will be erected from time to time as their worth becomes better known.

The value of a silo for the man who keeps rather a large number of livestock is hard to estimate. There is no other means of saving an immature corn crop to get as much value out of it as by putting it in the silo.

This year over a great area of the Ohio corn belt an early frost which was preceded by a heavy, warm rain started late corn to growing after a long dry spell and did many thousand dollars' damage to the corn crop. Many, like ourselves, had some late corn, but immediately after the frost we rushed this corn into the silo and it seems to be damaged but little. This corn, however, was discovered to contain less moisture than some that was siloed in former years. We should have liked to ensilo this corn earlier, but the corn was too immature. There were about two acres of this corn left that was not required for the silo and when husking this corn, which was a white variety supposed to be very early, it was found to contain many immature ears which made only inferior hog feed. Had it not been for the silo much of this corn would have otherwise been lost.

The writer has not fed ensilage to any kind of livestock except to sheep and cattle and only limited quantities to horses. A few farmers in our community have fed ensilage to hogs and horses, but we prefer to feed it to the former livestock. In some cases difficulty has been encountered with the horse when feeding ensilage as the digestive apparatus of the horse is vastly different from that of the cow. We have had several cases of indigestion in horses from this feed. Ensilage is also too bulky to make good hog feed. The hog must eat larger quantities of the fiber particles than is necessary or safe for his economical maintenance. Only a limited amount of corn is obtained in this way. Although some who do feed it to hogs say it is great feed for brood sows, as it keeps them stimulated and bowels gently loosened.

In our feeding ensilage to cows we feed twenty pounds twice per day to each milk cow and about the same to the young heifers. But in connection with ensilage to the milk cows they are fed cottonseed meal, oil meal or some other feed rich in protein to balance up the ration since ensilage is deficient in protein, a necessary constituent. The cows and heifers are given corn stover or clover hay as roughage.

We have had the best of results in feeding ensilage to our breeding ewes. We began feeding ensilage to the sheep about December 1st. We have had some trouble with impaction with our sheep in former years, but the trouble was that they were not amply supplied with water. We have not lost any sheep by impaction for some years, as they are given attention at once. What gave us the most difficulty in feeding sheep was the cobs. If the ensilage is cut short this will be largely if not wholly overcome.

Our lamb crop has been as large when feeding ensilage as when no ensilage was fed. In short, no appreciable difference in lamb crop was noticed in different rations. It might be added that when the ensilage is frozen the ewes are then given oats. We feed the ensilage to the sheep in open troughs and in five years' experience have never had anything but success.

For several years past, owing to short pasture we began feeding ensilage as soon as we finished filling the silo, while at other times we did not begin feeding ensilage until November 1st. We thus far have not found over eight to twelve inches of spoiled silage on top, but this season owing to the dryness of the corn at filling time we had possibly a trifle more spoiled ensilage.

With our experience we do not find a condemning feature of the silo only the expense of filling. This is rather an expensive operation, but we have one of the best feeds possible and we highly commend a silo to the man who keeps fifteen or more cows and some sheep or the farmer who keeps this number of cattle and wishes to feed ensilage to horses or limited quantities to swine.

We could call special attention to one recommendation made by Mr. Shellabarger. He points out that cows must be fed cottonseed meal, oilmeal or some other feed rich in protein in order to balance the ration. Many a man has been disappointed with the results obtained in feeding ensilage to the dairy herd when the whole fault should be placed at his own door. Ensilage is primarily a form of roughage, but if it is properly kept it is exceedingly palatable and grain fed in conjunction with it is used economically because a larger percentage of it is digested and assimilated than where only dry feeds are used. Those who are using ensilage for the first time this year should not make this fatal error and thereby carry their herd along on a productive basis equal to about one-half of their possibilities if good sense were used in balancing the ration.

LIVESTOCK ON GRAIN FARMS.

An Illinois subscriber points out some of the advantages that result from the practice of keeping considerable livestock on farms devoted in the main to grain growing. Among other things he says:

There are many reasons for maintaining livestock on farms devoted chiefly to grain growing. They should be so maintained, first, to bring fertility to the land; second, to bring humus to the same; third, to divide the labor on the farm; fourth, to consume products that would otherwise go to waste, and fifth, to bring increased revenues to the owners of such farms.

The soils of some grain farms are very rich, but however fertile such lands may be, they must be weakened in their producing power by continuous grain growing without supplying any equivalent to make up for the loss. For instance, when a bushel of wheat is grown on such soil there is taken from the land in the wheat and the straw one and three-fourths pounds of nitrogen, one pound of phosphate and one and four-fifths pounds of potash. A crop of twenty bushels will take from the soil twenty times these amounts, and elements in the soil will be reduced proportionately. It is evident that if such cropping is continued indefinitely, the time must come when the elements of nitrogen, phosphate and potash in the soil must be so reduced that the soil will not produce paying crops.

When livestock are kept upon the farm and much of the food is fed to them that is grown on the farm, fertility is put back on the land in some proportion at least to the fertility removed, and in this way the equilibrium in fertility is maintained, or at least it is maintained in part. To maintain it fully it is usually necessary to grow some legume that will take nitrogen from the air and deposit the same in the soil.

The lack of an ample supply of humus is in some instances a greater lack than the lack of fertility. Humus, that is vegetable matter, is taken out of the soil by each successive crop that is grown. This depletion of the humus puts the soil out of mechanical balance. It lessens the humus in the soil, and as it does, it decreases its moisture-holding power. It also decreases the amount of the available fertility which humus so readily supplies. To increase the humus supply the land should occasionally be devoted to some kind of grass production, the roots of which will supply the land with humus. Pastures are especially well adapted for such a use. The humus in grass roots and the stubbles of the same when they are removed are greatly in excess of the humus furnished by the roots of ordinary cereals.

The grain farmer is usually overdriven with work. He has more than he can do properly in the springtime and in the harvest. To enable him to overtake this work he must employ "hobo" labor, especially in harvest. That kind of labor is very unsatisfactory. It is labor that is furnished in the absence of a conscience, and all labor furnished in the absence of a conscience in active play is unsatisfactory labor. He must maintain more losses than would otherwise be necessary to perform his work, if it is to be done on time. He must invest in machinery to an extent that would not be called for if his work was diversified. He has a period of enforced idleness in winter, whereas if he kept livestock through all the year, he would have less labor in summer and more in winter, and in this way labor would be equalized throughout the year. No business that is healthy will overwork a man in summer and allow him to go idle through all the winter.

When livestock are kept on the farm they consume many products that would otherwise go to waste. For instance, they consume the herbage in great part, at least, that grows up amid the stubbles. This in humid seasons may become an important source of revenue. They consume the grazing that grows up in various by-places on the farm and turn it into money. They also turn straw into a marketable product. In the absence of livestock, straw is often burned.

The keeping of livestock brings materially increased revenues to the farm where they are judiciously kept. The coarse grains that are being fed to livestock are being turned into money that will give a larger return than the cash that would come from selling the grain. The time is now here when livestock brings greater relative profits than can be obtained from the sale of grain direct, because of the prices of meat. The grain crops grown will also give much larger yields on livestock farms.

Too much emphasis cannot be placed on the importance of keeping the soil well supplied with humus, and to this end no plan has been discovered that excels the keeping of livestock. While it is true that there is a slight depletion of the mineral elements in soils even under an ideal system of stock raising, yet in the majority of cases production can be increased right in the face of this fact. The increase is due in this case to improved mechanical conditions that result from applying manure to land and to a freer liberation of mineral plant foods which is the direct result of humus decay. To outline an ideal system of soil maintenance it is necessary to make reference to the addition of a small supply of phosphoric acid at certain intervals. This is the element that is drawn upon most severely in grain growing and more and more the farmers of the corn belt must come to the practice of planting their rotations so that legumes are grown at frequent intervals, manure added at certain times and, in addition, phosphate in some form applied to the soil from time to time.

IMMUNE BROOD SOWS.

There has been a great deal of talk about ways and means of increasing the livestock population of the corn belt. This, in the main, has accomplished little if anything. It is therefore most refreshing to find an instance where something of a practical nature is being accomplished toward this end.

We have in mind at this time the plan that has recently been inaugurated at the stock yards at Sioux City, Iowa, whereby typey brood sows instead of being sent to the slaughter are given the simultaneous serum treatment after which they are resold to farmers and breeders for breeding purposes. While no guarantee is placed on these sows that they will not contract cholera in the future, yet so much pains are taken in methods of treatment and in the character of the serum that the risk is reduced to the minimum. The placing of these brood sows back on the farms of the corn belt where they really belong rather than converting them into pork is a step in the right direction and, as before stated, it is about the first sensible practical plan that has been put into operation whereby the supply of at least one class of livestock will be increased in the future.

TO STUDY BEEF SHORTAGE.

As a result of a meeting held in Washington during the past week and attended by a number of agricultural authorities, it is highly probable that a national commission will shortly be appointed to study the economic phases of beef production. Last week's meeting was called by the present secretary of agriculture, David F. Houston, and was attended by a number of experts from the grain belt. One of the prominent men present was Dr A. D. Melvin, who has been chief of the bureau of animal industry for the past eight years and who has only recently returned to this country from Argentina, where he went several months ago, at the request of Secretary Houston, to study conditions of the meat industry of South American cattle-exporting countries. Dr. Melvin, it has been announced, will return to Argentina, in company with the former assistant secretary of agriculture, Willet M. Hays, and assist that country in getting its cattle industry safely on its feet, to the end that it may take higher rank among the countries of the world looked to to supply the meat of the future. A newspaper dispatch from Washington gives the following details of last week's conference:

Iowa, Minnesota, Illinois, Indiana, Missouri and Kansas, the leading states in beef production, were represented, along with the best expert authority of the department of agriculture. Prof. W. J. Kennedy was there representing Iowa.

The shortage of the beef supply was discussed at length and means for remedying it were gone over. While no formal action was taken it is likely a national commission will be named to study the problem, which is of the greatest importance in the high-cost-of-living discussion.

Professor Kennedy took the position that more economic means of beef production must be found. That beef must be produced in the future by greater utilization of roughage, that cornstalks must be used through the silo and that alfalfa must be employed to a greater extent.

He said that instead of several pounds of grain to one of hay, beef cattle must be got to market with 39 to 40 per cent grain.

The conference was one which is likely to bring important results to the country. If a commission is named it will look to find more economic ways of raising beef cattle, marketing them and getting meat to the consumer.

The personnel of the commission has not yet been hinted at, but if it is to arrive at conclusions which will be accepted as authentic and worth while, it must be composed of men whose familiarity with beef cattle conditions throughout the United States generally will give credence to their findings, not mere economic theorists with impractical ideas. No more important problem confronts the country today. The gravity of the situation makes necessary the utmost care in the selection of the proposed commission and the thoroughness with which it shall work.

WATER REQUIREMENTS OF PLANTS COMPARED.

According to the results of certain investigations carried on by the National Department of Agriculture, millet takes less water from the soil in producing one pound of dry matter than any other economic plant. Its requirement, namely, 275 pounds for each pound of dry matter produced, is exactly the same as certain weeds and it is even less than the well-known Russian thistle, which is 336 pounds.

It is rather surprising that corn with its broad leaves requires only 369 pounds whereas it takes 614 pounds of water in the case of oats to produce one pound of dry matter. Wheat requires 507 pounds, so that, after all, compared with the cereals, corn is economical in its use of water.

We were rather surprised to learn that the legumes use water most extravagantly. For instance, for each pound of dry matter produced by red clover it requires 709 pounds of water and in the case of alfalfa the requirement is 1,068 pounds of water for each pound of dry matter. Of course, it must be remembered in this connection that the legumes are very deep rooting in their habits, drawing water as they do from depths ranging between four and ten feet.

From the standpoint of grain only, sorghum or cane takes the lead, requiring 790 pounds of water to produce one pound of grain; millet follows requiring 923 pounds of water, while oats require 1,680 pounds of water for every pound of grain produced. These figures explain satisfactorily why such crops as millet and cane are grown most extensively in those regions where the rainfall is comparatively light, as these crops are able to do more business with a given amount of water than any of tthe cereals, including corn.

The hair of a dairy cow should be fine and soft; the skin soft and pliable and not too thick. A good dairy cow rarely carries a thick, stiff skin. A great deal of emphasis should be placed upon this matter in selecting dairy cattle.—Dairyman.

The Rough Farm is a Wealth Producer

A MEMBER of a firm of real estate agents who sell hundreds of farms yearly made a statement recently that in his opinion the rough farm was the best place for a man to locate on. This successful real estate dealer gave the following reasons: The first was because the rough farm could be purchased much cheaper than a smooth piece of land; secondly, the rough farm was a desirable place for all kinds of stock raising; third, the expense of running a rough farm would not be nearly as great as the expenses of running a smooth farm. There was a reason for this. The smooth farm would be put in grain. The assistance of one or more men was required to attend a large amount of grain. On the rough farm where stock raising was the chief industry one man could manage things.

This real estate agent declared that stock raising was fully as profitable as grain raising. All things considered the man on a rough farm who gave his attention to raising livestock had twice as good a chance for making money as the man who specialized on grain upon a valuable smooth farm.

The real estate dealer told the truth. The place for a man of moderate capital is upon a rough farm. He can buy more acres for the same amount of money. The rough pasture land furnishes as good grazing for the cattle as smooth pasture. Even if the plow land on the rough farm isn't of high quality it will raise good alfalfa if the proper seeding methods are put into practice. Then cane and kafir roughage can always be raised with success upon rough land. Of course a silo will be required to store these feeds in. Some of the large stock men who are located upon rough farms have from two to three large silos. They can raise plenty of good roughness upon the plow land to fill these silos. The silage gives them a supply of winter feed for their cattle which cannot be beaten.

An example of how two men made a great success on a rough farm will be given. This success was not so large as far as dollars are concerned —hundreds of farmers make much more money—but the farm upon which this success was brought about was supposed to be practically worthless. Many men in the same vicinity had gone broke. The men who went broke had tried to farm this rough land the same as they would rich level land. The two men who succeeded bought a rough piece of land at a moderate rate per acre. They got the land cheap; but even then people laughed at them. It did look rather foolish for anyone to speculate in land of that quality, especially when the land was located in an out-of-the-way place. But these two men started in differently than many of their neighbors had done. They specialized in stock raising. They kept cows and raised calves. They kept mares and raised mules and colts. They kept sows and raised pigs. It was astonishing the number of head of livestock that they raised in the course of a year.

Little farming was attempted. The plow land on this farm was thin and was of poor quality. It was divided into small patches. There was no opportunity for using up-to-date implements. The patches of ground which were broken out were in all kinds of shape. It was impossible to have nice, straight rows of corn. The two farmers got patches of alfalfa started. They sowed lots of cane and millet. The cane yields upon this kind of land were excellent. Before the alfalfa patches got a good start cane fodder was the mainstay of these two men.

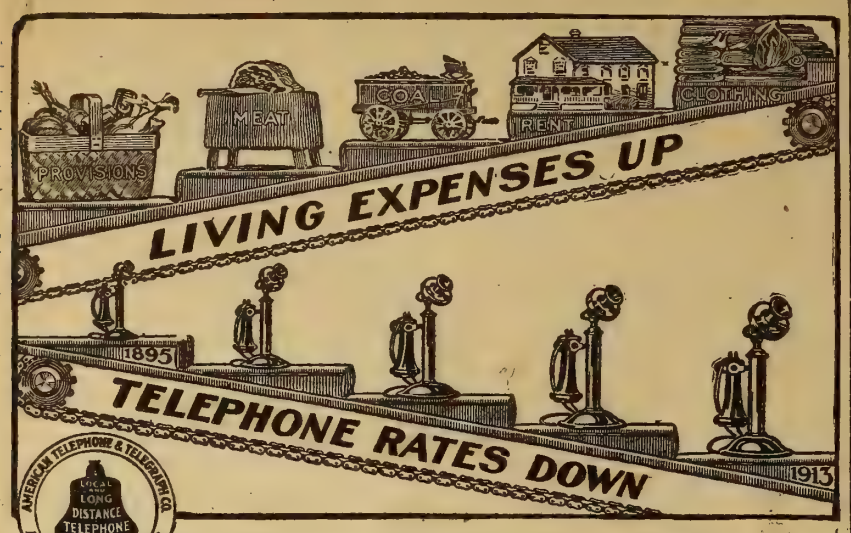
Gradually the herds increased. The hogs were usually sold early in the fall; good prices could generally be realized from them by selling to men who had much corn and no hogs.

Better grade cows were secured and dairying was carried on. The selling of cream brought in a good revenue and the milk from the separator came in handy for feeding the young shoats. The herds of all kinds of stock increased gradually. Every year some were sold; but the best breeding stock was retained.

Something over a year ago it became necessary for the partners to divide. They decided to have a sale. The sale was well advertised and the best auctioneer procurable was obtained. It was an all-day sale. While the exact figures giving the total receipts of the sale are not available, a few prices received for different animals can be given. This will prove that high-grade stock can be raised on cheap land.

A sucking mule sold for $102. The mule's dam brought over $200. Brood sows (raised on that farm) brought $25. Cows sold for from $50 to $70. These cows were all raised on this farm. Other stock sold proportionately high. One factor which increased the receipts from the sale, to a great extent, was the steers. These steers were beauties. The whole herd was raised on this cheap farm.

It was very gratifying to the partners to find after the sale was over that the net proceeds exceeded the value of the farm. There are not many smooth, valuable pieces of land in the country which will give returns to the owner like that rough farm did. The success these two men achieved was brought about by adhering to a few simple rules which must be taken into account when running a farm of this character. C. W.



Economy of the Bell System

Consider this significant fact: While most of the necessaries of life have gone up, the price of telephone service, which is one of the essential factors in our commercial and social life, has moved steadily downward.

Although a pound of these necessities still contains but sixteen ounces, the telephone user has been getting more and more service for less money.

On the average, the people of this country pay 49% more today for food, fuel and clothing than they did in 1895. Since then, the decrease in the average rates for telephone service has been more than one-half.

At the same time, the efficiency and value of the service to the subscriber has vastly increased. Today he can talk to an average of five times as many persons in each exchange as he could eighteen years ago.

This is the inevitable result of the comprehensive policy of the Bell system, which brings together the associated Bell companies and the communities they serve.

Through the very size and efficiency of their organization they accomplish improvements and effect economies which give the greatest service at the lowest rates.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Commenting on a recent statement made in this paper about the plan of filling a tile ditch with the disk one of our subscribers, Mr. W. O. Atkinson, says that he has found an improvement on this plan. He uses two disks and two teams, chaining the inner ends together loosely across the ditch, changing the length of the chain to suit conditions. We are glad indeed to receive this suggestion because it sounds good to us.

The interchange of plow bottoms is a good idea, and the farmer who rotates crops, thereby having considerable sod to plow, should have two style moldboards or bottoms, as the plow makers call them, for his plow.

A good wood lot on the farm beats the coal bill. With plenty of wood to burn a man takes less interest in the coal strikes and other modern plans for increasing the price of coal about the time a person has to have it.

The owner of a wood lot should also have a buzz saw and a gasoline engine to pull it, or be on amicable terms with some neighbor who has such a rig. Making wood by the buck saw and crosscut saw route went out of date as soon as the rig was cheapened in price.

Moderate pasturing of fall wheat is a good thing, both for the wheat and the stock that eats it. One should keep down the rank growth and induce root growth and the tramping of stock sets the soil more firmly around the plants.

If you plan on doing any concrete work this fall better be about it soon.

I have done concrete work in pretty cold weather, but it is better not to do it when there is much freezing. One can cover green work with manure to prevent freezing, but it is better to do it when no covering at all is needed.

Local merchants should bid more for quantity orders than they do, by making special prices on canned goods in case lots and on other staple articles in quantity lots. By doing this they would save much of the mail order trade for themselves.

One can tell the roads that have been dragged for some years, after heavy rains. The mud is never so deep, the subsurface being much firmer, and the top dries from one to two days sooner. A heavy road drag, persistently used on grades, is the cheapest road builder there is.

Where one is to feed corn or expects to shell it, a dirty job of husking does not make so much difference, but I do not like to crib husks and corn together for long keeping. Rats and mice work in it worse if any are about. Some huskers get so slovenly with their work one can hardly tell whether they are husking or snapping.

While we all realize that more farm machinery rusts out by standing through all the year in the weather than is worn out at actual work, I doubt if there is a great deal more machinery shedded now than there was ten years ago. Here is one thing in which we have not progressed as we should. We need more machinery sheds.

Building the spreader box nearer the ground is one of the greatest improvements on spreaders in recent years. I have one of the "high up" kinds, and when I use it I am almost sorry it is in as good condition as it is. The low down box saves half the lift, and the high, hard half at that.

Some of my neighbors show symptoms of getting excited over pop corn raising. Once upon a time I raised something like an acre of pop corn, and it seemed to me that the job of husking it never would end. When I got little more for it than field corn would have brought, my enthusiasm for pop corn growing came to an abrupt end.

The warm, heavy-weight sweater coat, the kind that buttons up to the neck when wanted, is the best thing for winter wear one can buy at a reasonable price. The warm sweater coat, with a denim jacket over it, makes a work combination that beats the clumsy duck coat a mile.

ASSOCIATION MEETINGS DURING INTERNATIONAL.

In the following list will be found the names and place of meeting of the various associations that will hold annual meetings during the week of the International Livestock Show in Chicago:

Convention hall No. 1, second floor International Amphitheater.
Convention Hall No. 2, third floor Livestock Record Building. (Entrance through Saddle and Sirloin Club.)
Convention Hall No. 3, second floor Livestock Record Building. (Formerly designated as Wool Office.)
Convention Hall No. 4, second floor Livestock Record Building. (Corner room.)
Convention Hall No. 5, second floor Livestock Record Building. (Second door to left, near head of stairway.)
Convention Hall No. 6, second floor, Swine Department. (Above Harness shop.)
Convention Hall No. 7, second floor Swine Department. (Above Harness shop.)

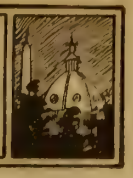
FRIDAY, DECEMBER 5.

American Shetland Pony Club, Stock Yard Inn, 4:30 p. m.

After every cutting the alfalfa field should be disked, if practicable, with the knives set not too slanting, in order to loosen up the soil well without cutting off the crowns of the plants. This regular practice of disking is very important. Sometimes a spring-tooth harrow gives even better results than the disk. After disking or harrowing, a corrugated roller will aid greatly in pulverizing and packing the loosened soil, and help to make a better and more effective soil much.

CURRENT EVENTS



IT IS NOW practically certain that a special convention of the republican party will be called, and probably held, some time this winter for the purpose of changing the manner of electing and seating delegates. The lawyers on the national committee have announced that the power to make these changes in time for the 1916 convention does not rest with the committee, but with the rank and file of the party itself. Accordingly, when the national committee meets within the next few weeks, it is almost inevitable that a convention will be called for the purpose of making these reforms, which were demanded at the Chicago convention last year but which the element in power at that time and that convention absolutely refused to grant, thus resulting in the movement which shortly resulted in the organization of the progressive party. It is proposed that hereafter delegates to the republican national convention shall be proportioned not according to the number of congressional representatives, as at present, but according to the actual vote cast for the head of the republican ticket at the last national election. This will mean the cutting down of the representation of the South very materially and the proportionate increase of the representation of the voter in the republican strongholds of the North and East. The reform is one which has long been demanded and now seems to be inevitable. While this discussion is going on, eastern newspapers have been busying themselves talking about possible republican candidates in 1916. One Washington paper brings out Justice Charles E. Hughes for president and either Senator Cummins, of Iowa, or Senator Borah, of Idaho, for vice-president. Senator Cummins has announced that he does not favor the use of his name in this connection, holding that if the republican party is to be rehabilitated it must be by the rank and file and not according to any pre-arranged plan made by leaders or newspapers.

GENERAL HUERTA, of Mexico, continues to defy the United States and while the situation is growing more critical daily there have been few actual incidents of note during the past week. Perhaps the most important was the visit of William Bayard Hale to the leader of the Mexican revolutionists, General Carranza. Dr. Hale is a close personal friend of President Wilson and is making an unofficial investigation in Mexico, reporting directly to President Wilson. He spent a whole afternoon with the rebel chief and his advisers, discussing the possible effect on the Mexican situation of this country lifting the embargo on arms and ammunition. The Mexican rebels have secured an option on the guns captured from the Russians by the Japanese, in the late war, but they cannot actually secure these guns at present, because every port of entry is controlled by the federal troops. Should the United States lift its embargo these arms could be shipped to the Mexican rebels over the United States line and they would then be armed for a determined assault upon the federal strongholds. General Carranza has declared that if he had plenty of arms he could overturn the Huerta government in ninety days. Inasmuch as Huerta has shown no intention of acceding to the ultimatum of the United States and relinquishing the office of president, there remain but two courses of procedure for this country: intervention, which means war with great loss of life, or recognition of the rebels and permission to them to secure arms of or through this country. The latter alternative seems the one most likely to be taken, unless there should be unforeseen occurrences shortly.

IN HIS travels through South America, Theodore Roosevelt is delivering a number of notable addresses. At Buenos Ayres recently he recited his political creed, listing among the more important reforms which he hopes to secure the following: "We propose to make the process of constitutional amendment far easier, speedier and simpler than at present. We wish to make the people the supreme arbiters between their servants, the court and the legislature, when the court and the legislature differ as to the proper interpretation of the constitution which the people made. We know that it is folly to try to make the fool the equal of the wise man, but we intend to control the greed and cunning and brutality in high places just as we control greed and cunning and brutality in low places. We intend to provide for the mother whose husband, bread winner, has died. We intend to protect the right of children to their childhood. From the men and women who work hard with clean hands we intend to try to lift the burden of haunting fear of an old age of undeserved penury and misery. We intend that machinery shall be the hand-maiden and not the mistress of humanity. We intend to make the government a most potent instrument in working for the uplifting of mankind." The colonel refuses to commit himself on the question of whether or not he will be a candidate for the presidency again in 1916, but evidences multiply that he will be in the thick of the fight for the progressives then fully as much as last year. It would not be surprising if the contest were to be narrowed down, three years hence, to the same two men, Roosevelt and Wilson, as in 1912. Albert Beveridge, of Indiana, has been mentioned as the progressive's next standard bearer, but there is no definite indication that Colonel Roosevelt intends to relinquish command.

THE cost of living having advanced 7 per cent within the last four years the arbitration board, to which was entrusted the grievances of the eastern railroad men, decided in favor of a 7 per cent increase in train men's wages. It will be recalled that a few months ago something like a hundred thousand eastern train men proposed to strike unless granted an immediate advance in wages, the advance reaching practically 15 per cent. Congress took the matter in hand and adopted an amendment to an existing law by which the whole affair could be submitted to an arbitration board, consisting of employes and the government. It is this arbitration board which has investigated and found that the cost of living has increased 7 per cent since 1909 and which orders train men's wages to be increased proportionately. Like almost all such findings, the decision is a compromise, granting about half what the train men asked and yet at the same time making concessions which the employers refused to make. The new system is a great improvement over the old strike system, with its attendant misery, suffering, stagnation of business and even loss of life.

ONE of the severest early winter storms in many years visited the East, and particularly Ohio and Pennsylvania, last week. In Pittsburgh a foot of snow fell within twenty-four hours, while throughout Ohio the snow on the level was twenty inches, the drifts being five feet deep. Railroad transportation was badly crippled, while a number of accidents occurred on lake steamers. Senator Cummins, of Iowa, with 300 fellow passengers, was snowbound on a train in Pennsylvania, the entire number going without food for twenty-four hours, until rescued by farmers of the vicinity. The storm was unusual for November, so far as intensity was concerned. It was confined largely to these two states, the remainder of the country enjoying good weather.

Indiana authorities estimate that more than half a million hogs died from disease in that state in 1912, and that the consequent loss was more than three and one-half million dollars.

CAUTION!

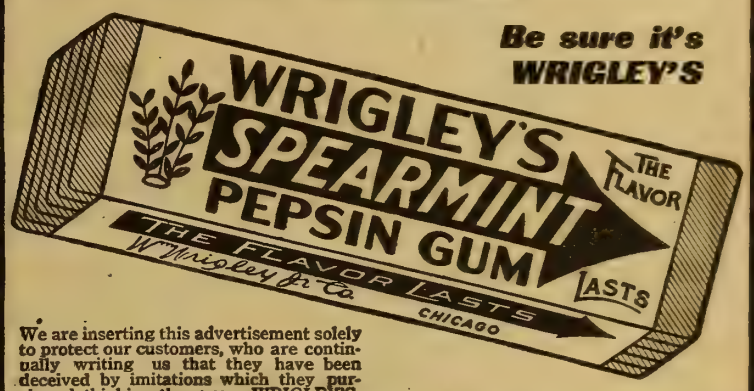
The great popularity of *the clean, pure, healthful*

WRIGLEY'S SPEARMINT

is causing unscrupulous persons to wrap rank imitations that are not even real chewing gum so they resemble genuine WRIGLEY'S SPEARMINT. The better class of stores will not try to fool you with these imitations. They will be offered to you principally by street fakirs, peddlers and the candy departments of some 5 and 10 cent stores. These rank imitations cost dealers one cent a package or even less and are sold to careless people for almost any price.

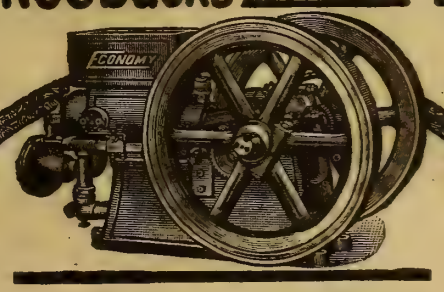
If you want *Wrigley's* look before you buy. *Get what you pay for.*

Be sure it's WRIGLEY'S



We are inserting this advertisement solely to protect our customers, who are continually writing us that they have been deceived by imitations which they purchased thinking they were WRIGLEY'S.

Sears-Roebuck's *ECONOMY* Engines



The Size You Want

Economy Gasoline Engines are made in *six sizes*, to meet practically *every requirement*. If you are not *certain* of just the size that is best for your needs we will gladly advise you. Simply tell us what machines you expect the engine to drive. This service is free of charge and puts you under no obligation to buy.

Our low prices are the result of modern methods of manufacture, enormous output and direct from factory selling. Our guarantee and reputation make you *sure* of satisfaction.

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

INFRINGEMENT OF PATENT.

A Subscriber, Unionville, Iowa.—A holds a patent right on a certain kind of hog house. Has any other person a lawful right to take a patent of the same, and make similar ones for his own use, without A's permission?

Answer.—No other person has such right, and if any person does make hog houses like the one A holds a patent on, even for his own use, A can recover damages from him, and restrain him by injunction from making or using them. The same law applies to any patented article.

HUSBAND AND WIFE—HIRED MAN.

A Subscriber, Mt. Ayr, Iowa.—A and B are husband and wife, and B claims that there is a written contract between them, signed by both to the effect that when they separate B is to get one-half of A's property. They are still living together. C hired A to work for him, and B has given C notice to pay A only half of his wages, and to pay her the other half. Is C required by law to do this, considering the alleged contract between A and B?

Answer.—He is not. C is liable to A alone for the wages A earns, and B has no interest in such wages. A can recover all his wages from C by law if C refuses to pay them.

GIVING LIQUORS TO MINORS.

A Subscriber, Cresco, Iowa.—We moved from the southern part of the state to this place, about ten miles south of Cresco, about four years ago. We have three boys, the oldest being nineteen years old and they had never tasted strong drink till we came here. In this part of the country beer and whisky, sugar and water with alcohol, and such drinks are passed around during theshing seasons, and at public sales, to men and boys, and sometimes men get so drunk they don't know what they are bidding on at a sale. Is it lawful to give away intoxicating liquors to men and boys in this part of Iowa?

Answer.—The law of Iowa provides that no person by himself, agent or otherwise, shall in any manner procure for, or sell, or give any intoxicating liquors to any minor for any purpose, except upon written order of his parent, guardian, or family physician, or give to or in any manner procure for, or sell the same to any intoxicated person, or to one in the habit of becoming intoxicated. The penalty for a violation of this law is a fine not less than $25 nor more than $200. and costs of prosecution, and imprisonment in jail till fine and costs are paid.

DIVORCE IN NEBRASKA.

A Subscriber, Neb.—A husband and wife have made their home in Nebraska for five or six years, and both of them want a divorce. How long will it take to obtain a divorce?

Answer.—If the parties agree and conspire together for the purpose of obtaining a divorce, it cannot be obtained at all, but if either of them has good cause for divorce against the other, it can be obtained. Either party may obtain a divorce from the other, for any of the following causes, viz.—adultery, extreme cruelty, desertion or abandonment for two years, physical incompentency, habitual drunkenness and conviction of a felony. Where cause actually exists, a divorce may be obtained in from two to six months.

TEAMS AND AUTOS PASSING—NEW LAW.

A Subscriber, Ossian, Iowa.—What is the new law in Iowa concerning the passing of teams and motor vehicles on the public roads?

Answer.—The last legislature passed a new law regulating the operating of motor vehicles and teams on the public roads. It provides that "Persons on horseback, or in vehicles, including motor vehicles, meeting each other on the public highway, shall give one-half of the beaten path thereof by turning to the right. Whenever a person in any vehicle shall approach from the rear upon the public highway and desire to pass, it shall be the duty of the driver or operator of such vehicle ahead, to give one-half of the beaten path thereof, upon proper signal or request by turning to the right. The vehicle, approaching from the rear, shall turn to the left, and shall not return to such road or path within less than thirty feet of the team or vehicle which has been passed; provided, however, that such vehicle need not give such right of way, when it would jeopardize the safety of the driver or operator to do so. Failure to comply with the above shall be deemed a misdemeanor. and punishable as such."

MEANING OF RENTAL CONTRACT.

A Missouri Subscriber.—A rented his farm to B for one year, B to pay as rent two-fifths of the grain raised, and one dollar per acre for pasture and hay land. It was understood that millet sown should not be allowed to go to seed, and that A should have two-fifths of it. (1) Has B a right to raise millet on some of the best plowed land, and make it into hay, claiming all of it by paying A only one dollar per acre for the ground on which it is raised? (2) Has B a right to sub-rent part of the land and allow sub-renters to raise millet, and pay A only one dollar per acre therefor, giving A none of the millet?

Answer.—(1) If B raises millet, A is entitled to two-fifths of the same under the contract. B cannot keep all the millet raised, and pay A only $1 per acre for the use of the ground upon which it is raised. (2) The same principle applies in case B sublets part of the ground for raising millet. A is entitled to two-fifths of it.

DIVISION OF ESTATE IN NEBRASKA.

A Subscriber, McCook, Neb.—A man owning property in Nebraska died without making a will, leaving a wife and one daughter. The daughter is married and has two children, both under age. How is the man's estate to be divided according to the laws of Nebraska?

Answer.—The widow is entitled to what is called the "widow's allowance" including wearing apparel, household and kitchen furniture, and property which was by law exempt to her husband as head of the family, and suitable provision for the support of the widow for a period not exceeding one year. After such allowance and provision is made for the widow, she is entitled to one-half of all the remaining property, real and personal, and the daughter is entitled to the other half.

COLT KILLED BY AUTO.

Mr. W. H. Miller, South English, Iowa.—A was driving an auto up hill at a speed of about twelve miles an hour, and met a boy driving a team hitched to a spring wagon, with a young colt following. A turned out of the road to the right, and the boy turned out the other side, and the colt went in the middle of the road, and did not seem scared till the auto was even with it, when it suddenly turned and jumped in front of the auto and was struck and crippled and died from the injury. Who must bear the loss?

Answer.—The owner of the colt must bear the loss, unless A was so careless or negligent in passing, that the injury to the colt was the result of such carelessness or negligence, in which case A would be liable for its value.

STALLION SERVICE IN OHIO.

An Ohio Subscriber.—A bred two mares to B's stallion, terms $20 to insure mares in foal. Five months before foaling time, B sent A notes which state that charges for service are to be three months after service. Nothing was said at time of service, about three months. A believes that neither mare is with foal. Can B recover service charges from A by the law of southern Ohio?

Answer.—There is no law for southern Ohio on the subject, which does not apply to the whole state of Ohio. Under the terms of the contract B can recover the service charges whenever the mares are known to be with foal, and not before.

CIDER VINEGAR—FOOL LAWS.

A Subscriber, Geneseo, Ill.—Many farmers in this part of the country make pure cider vinegar and try to sell it at the grocery stores, but the proprietors of the stores will not buy it, claiming that there is a law in Illinois forbidding them to sell vinegar unless it tests 45 per cent. What is the law of Illinois on this subject?

Answer.—The law of Illinois provides that cider vinegar shall contain not less than one and six-tenths grams of apple solids, and not less than twenty-five hundredths of apple ash in

TANNING FUR MANUFACTURING RAW FURS HIDES & SKINS
SEE WHAT OUR GREAT NEW MODERN PLANT MAKES POSSIBLE
WHY WE CAN PAY HIGHER PRICES THAN ANYBODY ELSE
Every Description Warm, Stylish, Fur Garments, for Ladies and Gentlemen, Tanned and made up at money-saving prices, from Skins, Horse and Cattle Hides sent us. No need longer to send East. Progressive, Low-Live Western Methods. An honest, square deal to all.

LA CROSSE FUR & HIDE COMPANY,
18 So. Front St., La Crosse, Wis.

100 cubic centimeters, and must be branded with the name of the fruit from which it is made, and contain 4 per cent by weight of absolute acetic acid, and no foreign substance. The Illinois law on the subject is only less absurd than the Iowa law. Both require the farmer who makes cider vinegar for sale, to be an analytical chemist, a trained mathematician, and a profound philosopher.

HOG-TIGHT PARTITION FENCE.

Mr. F. E. Wakeman, Bedford, Iowa.—(1) A and B wish to maintain a hog-tight partition fence between their farms. No streams or creeks cross the division line. If A's hogs get through B's part of the fence, and destroy some of B's corn, to what extent would A be liable to B for damages? (2) Can A compel B to fence across a creek or stream hog-tight on B's part of the division line, and maintain such fence solely for A's accommodation?

Answer.—(1) A would not be liable for damages because each agreed to maintain his part of the fence hog-tight, and it is up to B to see that his part will turn hogs, and if they get through his part from A's side, it is the result of B's negligence. (2) If the line fence has been divided between them and a creek or stream crosses B's part, he must make his fence hog-tight across the stream, provided A has made his part of the fence hog-tight, even though B keeps no hogs.

County Demonstration Agent.

IT MAY be well at the outset to admit that there is considerable objection among the farmers to the idea of having these demonstration agents. At the same time I am confident that it will be found that the best farmers believe in the principle of a county expert. We must go through a period of discussion until the majority of farmers have the correct understanding of the idea.

Jethro Tull, nearly 500 years ago, wrote a book that had for its central idea that "tillage is manure." He did not know about bacteria and the distribution of plant food, but he had discovered the benefit in good tillage, and we are preaching and practicing it today. Fitzherbert, in 1532, wrote in his "Boke of Husbandry:"

An husbande cannot well thryve by his corne without he have other cattell, nor by cattell without corne, for els he shall be a byer, a borrower, or a beggar.

Thus we see that some of our favorite agricultural doctrines are rather old. If these two fundamental truths were known so long ago, why have they not been practiced by everybody? The decalogue contains enough law and advice for all the world. Why was anything else ever written? Christ gave the gospel of love. Why was anything else ever written? In agriculture, as in morals and religion, the old, old things need repeating.

Washington and Jefferson were good farmers, and the Dutch and the Quakers who settled in southeastern Pennsylvania were good farmers evidently practicing the principles of Tull and Fitzherbert. During the first half of the nineteenth century several pamphlets on agriculture were printed and a few periodicals were published in the eastern states, all offering advice to the farmer. About the middle of the century some of the thoughtful men of America began to advocate the establishment of agricultural colleges, and in 1859 the state of Michigan decided to have a college of agriculture. In 1862 the Hon. Justin Morrill, of Vermont, introduced his bill in congress for the establishment of an agricultural college in ever state. In a few years every northern state had accepted the provisions of the law and had accepted the government aid for such colleges. The southern states, after the close of the war, began accepting the provisions of the law, and now every state has an agricultural college, giving advice to young farmers.

The second great step in agricultural history was taken in 1887, by the passage of the Hatch act, to establish an experiment station in every state. These experiment stations were for the purpose of carrying on investigations in soils, crops, breeding and feeding of animals, growing fruits, etc., all for the purpose of discovering new truths that might add to our agricultural wealth. And now there was the peculiar situation of spending millions of money to teach agriculture to the few boys who could attend the agricultural college and find out truths about agriculture, and not spending a penny to carry on these new and old truths out to the millions of people who could not attend college. Later the practice began of publishing bulletins reporting the details of experiments. These bulletins were usually technical, and then sent to a comparatively few. It is admitted that only a few ever receive the bulletins, and only a few read them understandingly, and but a small minority put the discoveries to a practical test on their own farms. And, therefore, it must be admitted that only a few people derive any practical benefit from the agricultural college.

Farmers' Institute meetings are helpful, but they lack definiteness. While at these meetings there is always a lot of discussion about the actual conditions in each particular community, it is yet impossible for the trained men from the agricultural college to get in touch with the actual problems of the farmer. And so it seems to me that the district and the county demonstration agents must be accepted as the next step to be taken. The man who objects to this ought to object to the agricultural college, and to the institute, and to the agricultural lecture or discussions at the grange, and to the printing of bulletins or books on agriculture, and to the United States Department of Agriculture, and to the farm papers, and he should never ask advice from anybody else, but he should farm as though he were the only man in the world. The agricultural college gets thousands of letters asking advice about every conceivable agricultural subject. The advice would have more value if given after an inspection of the man's farm or his stock.—[J. H. Miller in Kansas Year Book.

The cattle insurance societies in Holland usually insure all kinds of horned cattle above a certain age, but a number of them are confined exclusively to milk cows. Most of the societies require their members to insure all their healthy cattle above a certain age, except those fattened for slaughter. There were, in 1911, 885 such societies, with 89,748 members and 377,540 insured animals, so that, on the average, a Dutch cattle insurance society consists of 101 members, each of whom insures 4.2 cows. The twenty-two registered cow clubs in England and Wales in 1911 had an average of sixty-nine members, each of whom insured 3.0 animals. The death-rate in 1911 in Holland was 2.8 per cent, in England 2.6 per cent (2.2 per cent in 1910).—[London Livestock Journal.

The folly of the color craze in cattle is one which crops out from time to time on unlooked-for occasions and always to the discredit and damage of the cattle breeder. Only recently we are advised that a public sale of Shorthorn cattle, which was made up of solid red animals, failed because the buyers were against red cattle and in favor of roans. It is only comparatively a few years since buyers insisted that they must have red cattle and forced high-class white roans to the shambles, when their merits entitled them to prominent places in breeding herds. At the sale in question, good cows sold at prices which would only be fair for average brood cows.

BIGGS Pays Most for FURS
Why submit to have 5% deducted from the price of your skins when you can ship to "BIGGS," get top-o'-the market price and get every cent of it.
Traps, Guns at Factory Cost.

Fatten Your Stock on Water!
Let This Heater Boost Your Profits

Costs Less than one-half Cent an Hour
Runs Day and Night Without Watching

Let this self-running Oil Tank Heater supply your stock with plenty of properly tempered water and SEE HOW MUCH FASTER THEY FATTEN! The actual gain in weight is 15 per cent. Fuel cost next to nothing.

The Makestock-Waymore Safety Tank Heater

is the invention of one of Iowa's biggest, most successful stockmen, who feeds 3 to 5 loads of cattle every winter on his 500 acre farm. Heater takes up only 1-5 the space of the old style coal or wood tank heater.

Heats 20 Barrel Tank in Zero Weather

Can be adjusted to any degree, according to the weather. Makes no dirt! No wicks to trim! No fire risk whatever!

Let Us Send You Illustrated Circular giving full information, prices, etc. Pay for it out of the money it makes.

No time to lose—you need its help RIGHT NOW!

Positive Supply Co., 405 Rock Island Street, Davenport, Iowa

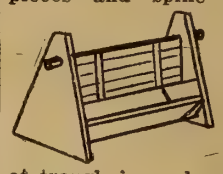
Patented Dec. 31, 1912

HINTS-SUGGESTIONS-DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

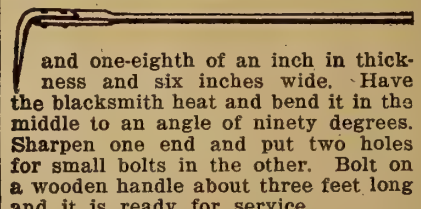
HANDY TROUGH FOR PIGS.

To make this trough take a plank two inches thick and length and width suitable for your needs. Saw in two pieces and spike together in "V" shape. Use the same kind of material for the end uprights. Spike to the end of trough. Bore a hole about thirty inches from top of trough in each one of uprights for swinging door to work in. Make the door of common boards. The swinging door enables you to clean trough and prepare food in it. When ready withdraw the slide and let door swing to natural position which is just over center of trough. The pigs will not run back and forth over the trough while eating, and their meal will be clean.



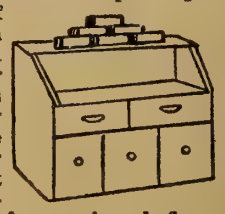
Instrument for Loosening Shock Corn.

Here is a device for loosening shock corn or fodder from the frozen ground in winter which one of our subscribers likes better than a hoe. Take a piece of strap iron about eight inches in length and one-eighth of an inch in thickness and six inches wide. Have the blacksmith heat and bend it in the middle to an angle of ninety degrees. Sharpen one end and put two holes for small bolts in the other. Bolt on a wooden handle about three feet long and it is ready for service.



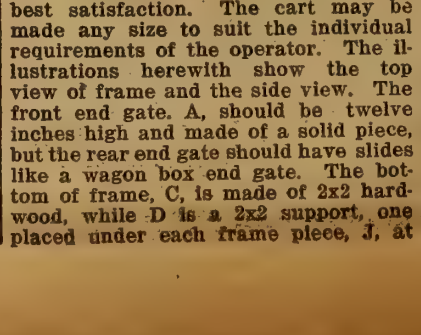
A Homemade Kitchen Cabinet.

A handy kitchen cabinet may be made from an old piano box and four cigar boxes. Saw the top corners off leaving room for shelf on top and put in a wide shelf below as shown in illustration. A long drawer or two small ones may come under this for the table linen. The lower part of cabinet may have a drawer on each side for meal and flour. The door in center below is for the kitchen utensils which may be hung on small nails on either side. The kettles can be set on bottom of cabinet. The cigar boxes on top may be used for salt, soda, baking powder and spices. This when painted white is ornamental as well as useful in any kitchen.



An Extra Strong Hand Cart.

A hand cart is useful on every farm to haul milk from the stable to the cooling place, to haul grain, feed, fence supplies, water, etc. The cart should be strong and serviceable with a good iron axle that will not break when needed most. Secure the wheels and arch axle of an old walking cultivator from some old iron dealer if you have none yourself, as this is the best thing usually found for the purpose. However, any good iron wheels with an axle which the blacksmith can furnish at slight cost will serve the purpose to the best satisfaction. The cart may be made any size to suit the individual requirements of the operator. The illustrations herewith show the top view of frame and the side view. The front end gate. A, should be twelve inches high and made of a solid piece, but the rear end gate should have slides like a wagon box end gate. The bottom of frame, C, is made of 2x2 hardwood, while D is a 2x2 support, one placed under each frame piece, J, at end of I. The figure, E, represents the iron support, F, the axle, G, 2x2 end piece mortised in J, H, strengthening irons to prevent twisting of frame, J the 2x2 side frame and K, the handle mortised to sides of frame, J.

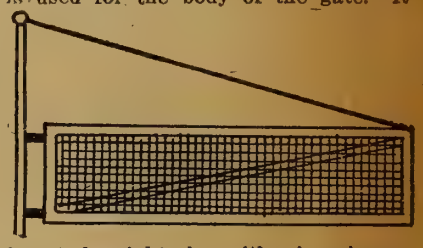


A Feed Rack Made From Old Boards.

A feed rack like the illustration shown is made from odd pieces of boards which can be picked up on almost any farm. For four head of horses plan a rack about twenty feet long. Make the frame of poles or planks. The ordinary rack is about four feet high. Cut the pieces of boards the right length and nail them on endways, or, properly speaking, upright. Match them evenly and you will have a perfectly tight rack. This is the least expensive type to build. When it is desirable to have a back for the rack it is made from two-foot boards nailed to the tops of the four-foot uprights.

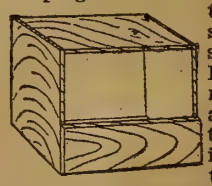
An Up-to-date Gate.

The frame of this gate is made from boards six inches wide and an inch thick. Of course the gate frame is cut to any size the maker desires. One brace is placed corner ways across between the frames. Field fencing is used for the body of the gate. It is cut the right size with wire nippers and attached to the frame with small staples. The gate is suspended from a long pole set solid in the ground. To make this post solid set it in concrete. The gate is fastened to the pole with large hinges, then a wire cable or small chain holds the weight of the gate up to the top of the pole.



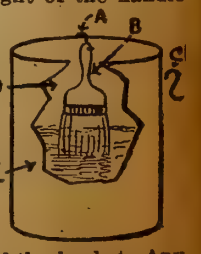
Tar Paper For Nest Bottoms.

A sheet of tar paper, the size of the bottom of the nests, is a great help in keeping down lice and mites. Sometimes the sheet is saturated with a standard lice killer. However, this is not always advisable on account of the danger of tainting the eggs, but if they are gathered often it is not likely to, with the nest well filled with clean, bright straw. A good-sized handful of unslacked lime placed in the bottoms of the nests weekly is a great aid in preventing lice also.



Paint Brush Holder.

Farmers use paint brushes from time to time and always have considerable trouble cleaning them after use. If not thoroughly cleaned the brushes will harden. When brush is set in water the weight of the handle pressing down on the bristles warps them out of shape, but by following the method explained the brushes may always be kept pliable, in good shape and ready for instant use. The figures A and B show the brush hanging on hook on the side of the bucket. Any tin bucket will answer the purpose. Figure C shows the proper shape of hook which may be made of wire, the top end being hooked over the buck-



et and the brush being attached to the bottom by means of a quarter inch hole in handle. Only enough water should be put in bucket to cover bristles. A paint brush should never be put in water until it has been in paint or oil or the water will ruin its shape and make it soggy.

Community Co-operation Needed.

INDUSTRIAL life is daily becoming more and more complex. From the average farm comes a greater diversity of products than from any factory. The producing of crops and of livestock are as widely different as the manufacture of dry goods and of hardware, which no single factory ever attempts to undertake.

The community idea of practice in agriculture is being brought about by several separate and diverse factors and has made rapid headway along certain lines in recent years. One of these has been the steady spread of the belief in the brotherhood of man as an industrial as well as a religious dogma. Another and more directly potent factor is the belief, dominant in some farming communities and existent in all, that the producer does not get a fair share of the profits resulting from the sale of farm products. This has led to the formation of such co-operative agricultural bodies as the Farmers' Union and similar if less extensive organizations of farmers, such as creamery and elevator companies; cattle and sheep producers' and shippers' associations; fruit, truck and grain growers' associations; and the like. Some of the latter have arisen through the founding of new crop industries or the extension of crop industries to new localities, and the necessity of finding or creating a market for the products.

Still another form of co-operation, though not necessarily entailing permanent organization, has been induced by direct economic problems connected with crop and stock production. Such, for instance, are community campaigns against noxious weeds, insect pests, fungous diseases, animal diseases, cattle thieves, and the like.

The benefit which may accrue from the co-operative regulation of crop varieties or cropping methods in any given community will vary with the crop and the uses to which it is to be put. The direct result may be to handicap the operations of some insect pest, as the cotton boll-weevil; to control some troublesome weed pest, as the Russian thistle; to avoid injury by some fungous disease, as smut or rust in wheat and oats; to gain access to profitable and truck crops; to enable the profitable sale of new or improved crop varieties, as durum wheat or long staple cotton; to prevent the results of undesirable cross pollination, as in cotton and corn, or to avoid mechanical mixture and consequent lowering of grade and value, as in most cereal crops.

Community co-operation may well be directed toward the prevention of such cross-pollination or of any mixing at all, since the crossing of varieties of the same color is undesirable because effecting uniformity of height, maturity and other characters. Owing to the readiness with which the pollen is carried by the wind there is danger of mixing not only in adjacent fields on the same farm, but on adjacent farms as well. The ready solution is to restrict by agreement the varieties grown in the community. This restriction will also be helpful in facilitating the profitable sale of pure varieties at the local elevators, since mixing different colors in the bin or car lowers the grade and price.

Increased community attention to early varieties, especially in northern states, may be stimulated by the recent promulgation of corn grades based on the moisture content. As these are adopted, a greater premium will be placed on dry, well-matured corn, and in the North this is most likely to be obtained from the fields of early maturing sorts.

The chief problem at present in obtaining a supply of good seed is in properly drying it and keeping it dry thereafter. Seed corn not infrequently contains 40 or even 50 per cent water. When placed in the ordinary farm storage there is always danger that it may not have sufficient ventilation to prevent heating and molding or sprouting and also that it may not dry rapidly and completely enough to avoid serious injury from freezing temperatures. It is often desirable to hasten the curing process or ward off early freezing temperatures by means of artificial heat. Usually this cannot be done safely and economically on the individual farm. P. C. Taff recommends the building and proper curing and safe storage from frost, moisture and vermin. He estimates that for about $350 a house can be constructed sufficient for 300 to 400 bushels of ears. This is estimated at twice the quantity actually needed by fifteen or twenty farmers, to whom the average initial cost would be only $20 or $25 apiece. The upkeep, of course, would be only a slight annual expense.

Wheat is the staple food grain of the human race. In the United States and Canada it is grown annually to the extent of about 55,000,000 acres, yielding an average outturn of about 840,000,000 bushels. Whatever effects the production of wheat, interests the people of the world. One of the most evident facts in the wheat-growing areas is the mixture of varieties. The admixture may consist of one or many kinds, sometimes as many as eight or ten varieties are present in addition to the one supposedly grown. These may represent only a fraction of 1 per cent of the total crop, or as much as 40 or 50 per cent in extreme cases. The loss resulting from such mixtures is not necessarily proportioned to the quantity of mixture present. A small percentage of the variety having different kernel character may lower the grade when ten times as much of a similar variety may not affect the market price at all.

A mixture of hard and soft common wheat or a mixture of common and durum wheat would be really serious in its financial effects. A mixture of two varieties with similar kernel characters would result in no appreciable commercial disadvantage, no matter how different the varieties might be in outward appearance.

Some striking examples of the need for communal action in wheat production may be cited. When the durum wheat was first grown in the United States the farmers could find no market for it as wheat, but were compelled to accept feed prices for it 20 to 25 cents a bushel less than for other wheat. The millers did not want it because it required special tempering to prepare it for grinding. They also asserted that its flour was of little value for bread-making when ground. Doubtless it was in demand for export to be used abroad in making macaroni and semolina, but the growers often were isolated and the quantity tributary to many elevators was small. During succeeding years the spread in price between durum and common wheat has been closed gradually until the crop of 1912 sold at a premium over common wheat. If, in the early days of durum wheat production, communities where this wheat was especially adapted had combined to produce it in quantity and to obtain a fair price for it, the long period of discrimination against it would have been much shortened. Considerable profit to the growers would have resulted from such action. These arguments still hold good in localities where durum wheat is being newly introduced since there is bound to be discrimination where the grain is presented in less than car lots.

Conditions similar to those described existed when the hard red winter wheats were first brought to the central plains area and community co-operation would have done much to relieve the onerous situation. The same conditions are occuring today, to some extent, in the Great Basin and Pacific Northwest where the hard red winter wheats are being introduced rapidly. Considerable prejudice against them has been developed by certain milling agencies and only

COAL Direct From The Mines

Keep Dealer's and Jobber's Profits In YOUR Pocket

DO you know that wherever you live *you* can now buy coal straight from the mines at wholesale prices, the prices your *dealer* has to pay?

Do you know that this winter you can save from $50 to $100 on your coal supply—have it delivered promptly—the cleanest, best heat-producing coal you ever used?

It is literally throwing your money away and adding to the high cost of living *with a vengeance* to continue to pay local prices for coal.

Our great mines near Vincennes, Indiana, produce enormous quantities of the finest coal in the country—the coal that is famous for its remarkable heat unit efficiency. We ship everywhere direct from mines in carload lots this splendid guaranteed fuel.

Tecumseh Coal

Save $50 to $100

on your winter's coal supply. We know that seems too good to be true, but it is an absolute fact that hundreds of people far and near are already buying Tecumseh Coal from us at wholesale and making this marvelous saving.

Not only is Tecumseh the best heat giving coal—but it is *all coal*—cleaned at the mines by the most perfect system ever installed.

No matter how big your coal bills have been in the past—no matter how much you have fattened the jobber's and dealer's profits—the time to turn your back on the old costly round-about way of buying is now. Begin with *this* winter to make this real saving.

It is plain common sense for you to save money by dealing *direct with the mines.* You owe it to yourself to find out the facts and prices—to learn more about Tecumseh Coal. All we ask is the opportunity to quote you prices—to prove in actual figures the splendid saving you can make.

This should interest you whether or not you intend to buy a full car of coal.

Club with Your Neighbors

If you cannot use a whole car—25 to 40 tons—you can easily arrange with your neighbors to divide up the shipment and still make this handsome saving on your winter's coal.

This money-saving plan is too important to be set aside. The amount of waste money you have been paying your dealer belongs in your own pocket. Keep it there. Right now take the first step. It obligates you to nothing. Just fill out and mail us the coupon in this advertisement. The prices we quote will positively surprise you. But do it now before the matter slips your mind. Address

where they are produced in quantity can they be marketed at full profit in a region of soft winter wheats.

There are many other advantages to be derived from growing a single variety of wheat, oats or other small grain in any particular community. One of the commonest observations in the cereal-growing areas is the mixture of varieties which appears commonly in the fields. These mixtures greatly reduce the value of the crop for seed purposes, even if they do not cause a lowering of the market grade. They often entail direct loss through nonuniformity in ripening and differences in length and strength of straw, disease-resistance, adaptability to soil types and climatic conditions, and other similar characters. In some seasons and in some places these factors do not appear important and even the agronomist may assume that they are negligible quantities. The crime of growing mixed varieties may thus be neglected or condoned. There is an almost universal law of nature, however, that some—time, somewhere, the hidden defect will be revealed.

Two points should be held in mind. First, that the very idea of mixtures should be persistently discredited as being fundamentally wrong from the standpoint of good farming. Most growers will not be able to distinguish between the mixtures which may not cause loss and those which will inevitably do so. Secondly, no investigator can predetermine when, in an apparently harmless and profitable mixture, one variety shall be taken and another left, through some change in the environment conditions. Only in purity is their safety.

Another advantage of pure varieties is the better yield which usually results if the proper variety is grown. The man or the community may not receive a better price for the pure seed, but would be profited in any case by the increased yield. It should not be forgotten that the neighborhood separator is a powerful factor in mixing the varieties where many are grown.

Increasing the Meat Supply.

OUR meat supply can be maintained or even increased in the following ways: By the revival of beef cattle raising in the corn belt and its extension in eastern states. Up to the time of the rapid increase in the price of farm lands, farms in the corn belt where beef cattle were raised were common. The rise in value of land and the increase in the price of corn caused pastures to be plowed up and the beef cows disposed of. A reaction is now setting in which promises to become important. A similar movement is noticeable in the eastern and New England states. Success depends upon the utilization of pastures and cheap roughage.

By the use of the dual-purpose cows. In strictly dairy sections, especially those producing market milk, the dairy cow is the only one to be considered. Her calf is an incident—a necessary evil. The production and marketing of milk is the dairy farmer's business, and he cannot afford to let his attention be diverted from the main matter in hand. On thousands of diversified farms, however, especially where cream is sold to "centralized creameries," only a few cows are kept, and they are only part of the farmer's business; the milk is but one of several sources of income. In such cases the cows should produce calves that will make profitable feeders.

By raising sheep extensively in the corn belt and eastern states. The importance of the wool industry causes the farmers to overlook the value of sheep for mutton and as weed destroyers. A small flock of sheep of one of the mutton breeds should be kept on every farm to graze the roadways, the stubble fields after grain is cut, and the cornfields after the corn is full grown. Both wool and lambs are salable.

One of the best opportunities for sheep feeding will be found in the irrigated West. Proximity to the range and the great value of alfalfa hay for fattening sheep make this business attractive.

By increasing hog production on the irrigated farms of the West and by making pork production an adjunct of the creamery wherever the conditions permit. The irrigation farmers have a splendid opportunity for the profitable production of pork of the highest quality. Pigs can be raised at a minimum cost on alfalfa, and should then be finished on grain, barley and peas. A brood sow can be wintered on alfalfa hay and a few sugar beets daily, without grain.

At creameries, where no use is made of skim milk or buttermilk, pig feeding should be an important sideline. Corn and milk make an economical ration for fattening, and one which produces pork of excellent quality.

By increasing the production of beef cattle and hogs in the South, The South is the only section of the United States where cattle can still be raised, fed and sold at a profit of from five to six cents per pound. The tick has been almost the only drawback to cattle production in the South, but its passing is simply a question of time and industrious perseverance.

The hog is the beef steer's boon companion. He is increasing in numbers in the South, and southern farms will in time supply the pork eaten by southern farmers, and perhaps a good deal for the market as well. The wonderful development of the boys' corn clubs is being supplemented by the organization of boys' pig clubs. The boys of the South have been shown how to grow corn; they are now being shown how to feed it to hogs.

By increasing the poultry output of the farm. Poultry and poultry products have profound influence on the meat supply, but less attention is probably paid by farmers to the breeding of farm poultry and their care than to anything else on the farm. With easy possibilities for rapid improvement by the use of pure-bred males, our farm flocks still remain, as a class, decidedly underbred.

Almost every section of the country can produce chickens. Every farm could maintain a larger and a better flock. The South offers unusual opportunities for the production of poultry on the farm, on account of the early laying season, and the girls' poultry clubs, now being organized as supplements to the canning clubs, promise to become an important factor in the increase of the farm poultry industry, not only in the South, but in other sections of the United States as well.—[By Geo. M. Rommel, Chief of Animal Husb. Div. Bur. of Animal Industry.

The Agricultural bank, which was founded by the government of the Philippines about four years ago for affording relief to Filipino farmers from the oppressive interest rates charged them by private money lenders, has passed the experimental stage and is proving an immense success, notwithstanding serious difficulties. The operation of banks in the islands is difficult because of faulty land titles. Titles are of the most mixed description, involving royal grants, improperly settled estates, doubtful court decrees, imperfect surveys and many other conditions making absolute ownership difficult, if not impossible. To correct many of these evils the government some years ago established a Torrens systems of land registration by which titles to land are cleared and government deeds given for land so registered.—[News Item.

Comparisons based on a butter-scoring contest so aroused the citizens of Rome, South Carolina, that they have erected a dairy barn and milk room on the grounds of the local school, in order that the children may learn dairying as a regular part of their school work. Accommodations have been provided for five cows. Boys and girls of the seventh and the eighth grades are studying the best methods of dairying under the direction of an extension worker from Clemson Agricultural College.

Corn Crop Worth Most in History

THIS year's corn crop promises to be the most valuable this or any other nation ever has produced, although the department of agriculture's preliminary estimate of production, indicates it will be more than 500,000,000 bushels less in size than the record crop of last year, and the smallest since 1903. Based on the department's figures of 70.7 cents per bushel, the average farm value on November 1st, the crop as now estimated is worth $1,741,353,019, while the value of the 1912 record crop was $1,520,454,000. The previous most valuable crop was that of 1909, when it was worth $1,652,822,000.

The department's preliminary estimate of production increased by 90,000,000 bushels the estimate made in October and also that made in September. This was taken to indicate that the damage from the very severe drouth in the middle West was somewhat overestimated. The department's final estimate of production next month may show further increase in the size of the crop.

The greatest damage from the drouth is indicated in the figures for Kansas, which show the acre yield there to have been reduced to 3.2 bushels, compared with 23 bushels last year; in Missouri, where the yield was 17.5 bushels, compared with last year's 32 bushels, and in Oklahoma, where it was 11 bushels, against 18.7 last year. In Illinois the yield was 13 bushels below last year's yield, in Iowa 9 bushels, in Nebraska 9 bushels, Missouri 14.5 bushels, Indiana, 3.7 bushels, and Ohio 5.2 bushels. Details of the report follow:

Corn—Total production, preliminarily estimated, 2,463,000,000 bushels, compared with 3,124,746,000 bushels last year. Yield per acre, 23.0 bushels, compared with 29.2 bushels last year, and 27.0 bushels, the ten-year average. Average farm price, 70.7 cents per bushel, compared with 58.4 cents last year. Quality, 95.8 per cent, compared with the ten-year average. Corn of 1912 crop remaining on farms November 1st was 137,972,000 bushels, compared with 64,764,000 bushels of the 1911 crop remaining on farms November 1st last year.

Buckwheat—Total production, preliminarily estimated, 14,455,000 bushels, compared with 19,249,000 bushels last year. Yield per acre, 17.2 bushels, compared with 22.9 bushels last year and 19.8 bushels the ten-year average yield. Average farm price, 75.5 cents per bushel, compared with 65.5 cents last year. Quality, 95.5 per cent of the ten-year average.

Potatoes—Total production, preliminarily estimated, 328,550,000 bushels, compared with 420,647,000 bushels last year. Yield per acre, 88.2 bushels, compared with 113.4 bushels last year and 96.0 bushels the ten-year average yield. Average farm price, 69.6 cents per bushel, compared with 45.5 cents last year. Quality, 93.3 per cent, compared with the ten-year average.

Sweet Potatoes—Total production, preliminarily estimated, 55,760,000 bushels, compared with 55,479,000 bushels last year. Yield per acre, 95.0 bushels, compared with 95.2 bushels last year and 91.0 bushels the ten-year-average yield. Quality, 99.4 per cent of the ten-year average.

Flaxseed—Total production, preliminarily estimated, 19,234,000 bushels, compared with 28,073,000 bushels last year. Yield per acre, 7.9 bushels, compared with 9.8 bushels last year and 9.0 bushels, the ten-year average. Average farm price, 118.7 cents per bushel, compared with 133.4 cents per bushel last year. Quality, 101.8 per cent, compared with the ten-year average.

Tobacco—Total production, preliminarily estimated, 903,875,000 pounds, compared with 962,855,000 pounds last year. Yield per acre, 789.9 pounds, compared with 785.5 pounds last year and 824.0 pounds, the ten-year average. Quality, 97.4 per cent of the ten-year average.

Wheat—Total production, preliminarily estimated, 753,233,000 bushels, compared with 730,267,000 bushels last year. Yield per acre, 15.2 bushels, compared with 15.9 bushels last year and 14.2 bushels, the ten-year average. Average farm price, 77.0 cents per bushel, compared with 83.8 cents last year. Weight per measured bushel, 58.6 pounds, compared with 58.3 pounds last year and 57.8 pounds, the ten-year average.

Oats—Total production, preliminarily estimated, 1,122,139,000 bushels, compared with 1,418,330,000 bushels last year. Yield per acre, 29.3 bushels, compared with 37.4 bushels last year and 29.8 bushels the ten-year average. Average farm price 37.9 cents per bushel, compared with 33.6 cents last year. Weight per measured bushel, 32.1 pounds, compared with 46.8 pounds last year and 31.5 pounds, the ten-year average.

Barley—Total production, preliminarily estimated, 173,301,000 bushels, compared with 233,824,000 bushels last year. Yield per acre, 23.9 bushels, compared with 29.7 bushels last year, and 25.5 bushels, the ten-year average. Average farm value, 54.7 cents per bushel, compared with 53.8 cents last year. Weight per measured bushel, 46.5 pounds, compared with 46.8 pounds last year and 46.0 pounds in 1911.

Hay—Total production, preliminarily estimated, 63,460,000 tons, compared with 72,691,000 tons last year. Yield per acre, 1.31 tons, compared with 1.47 tons last year and 1.43 tons, the ten-year average. Average farm value, $12.26 a ton, compared with $11.80 a ton last year.

Final estimates of the crop reporting board giving the harvested acreage, production and value, of important crops of the United States will be announced by the department of agriculture Monday, December 15th.

CONFUSION ABOUT SWINE DISEASES.

To the Editor of The Homestead:

In my articles on the treatment of hog cholera, contagious pneumonia, etc., there seem to be some confusing points which have bothered some of you readers and these have been referred to me for explanation. The following communication demands that some of these points which seem conflicting be straightened out:

How are we to understand just what Mr. Beverly means? He claimed in his first article that the failure of the serum was due to the hogs having typhus fever to the extent of 75 to 90 per cent of Hamilton county and 50 per cent of the state, and not the cholera. He now comes back in his second article and advises vaccination as the only remedy, claiming it is a secondary infection following cholera. Now will he be kind enough to inform us how we are to follow his advice? He also warns the farmers against using some of these fool medical remedies as he terms them, but in the same article claims he has used one of them on several herds which he thought not advisable to vaccinate. One herd was treated at the very outset of the outbreak when only two or three had died out of a herd of seventy, then goes on and gives an example of a herd of 100 where they had lost twelve head before vaccinating which saved about 70 per cent of the rest. Then blames this farmer for telling his neighbors what had been used in the herd when he thought they were getting well, all of them having died afterwards, claiming they might have been influenced from vaccinating and saving their hogs. This farmer surely feels grateful to him for his service and advice. We in this neighborhood believe that vaccination for cholera will save the hogs if administered in time; even after the cholera has broken out in the herd it will save a good per cent of them if their fever is not too high and the serum is good, the only trouble having been that we could not get half what has been needed here this fall.

In my first article where I claimed that the failure of vaccination is not due to poor serum, but a complication of diseases, I believe that I am correct. As to poor serum all companies selling serum in the state of Iowa are under a bond of $1,000 to insure their putting out a good quality of serum and I believe most of them are doing so. I have used a large amount of serum during the past summer and fall months and have had but very little trouble from serum.

In my advising vaccination as a treatment for these diseases I gave what I am positively certain is the only thing that can be done that will give satisfactory results. As stated before, cholera seems to be the common carrier of these diseases and with that stamped out there is a better chance of saving the hogs than otherwise without vaccination.

As to using the calomel and ammonia treatments I will say that a farmer is informed of the complication of disease existing and refuses to vaccinate, but chooses to try some other treatment recommended by the veterinarian, it is up to him to give the best he knows of under the circumstances. As the calomel treatment was highly endorsed it was the one I recommended. The ammonia was stated to be nearly as specific in these cases, a druggist informing me of the excellent results obtained, so in the next case this was tried without any success. I do not see how the writer of the above letter can blame me as he does for doing what was asked and required of me after the owners refused to vaccinate. It is beyond the

Big Ben

Built of Good Implement Steel So He Lasts for Years

He wears an inner vest of steel which also serves as his bell. You can't wear him out. Give him a drop of oil a year, and he's good for a lifetime of handy service.

For your accommodation he rings TWO WAYS—set him either way you wish—to give one long five-minute ring, or ten short rings at one-half minute intervals, until you're wide awake.

More than 3,000,000 families have found him a reliable time-keeper. 20,000 jewelers have so many calls for him that they have to keep him within easy reach in their stores. You'll see him on almost every jeweler's shelves, and in his windows.

Think what it means for people to pay more than $8,000,000 to get this one clock in their homes. Don't you want Big Ben, the Eight-Million-Dollar alarm, since he only costs you $2.50?

He stands 7 inches tall, is triple-nickle plated, the handsomest clock of his kind living, has big bold numerals and hands that show the time plainly on dark mornings, large keys that anyone can wind without frowning, and such a pleasant tone that you are glad to get up when he calls.

There never was another clock that fitted in so well with farm work—getting the hands up on time, and acting as a good house-clock all day.

A community of clockmakers stands back of him. Their imprint, "*Made in La Salle, Illinois, by Westclox*," is the best alarm-clock insurance anyone can carry.

This Pair of Pliers is Free

I want to give each one of my readers my Combination Fence Pliers. No farmer can afford to be without one, especially when it costs him nothing. It will cut and splice wire, pull staples, grip rods and nuts, and has a screw driver attachment. There are hundreds of uses for this little tool. It also makes a handy household device. It is dropped forged from the best open hearth steel. It is case hardened and nickel plated. It is light and compact—only six and one-half inches long, which permits it to be easily carried in the pocket.

MY OFFER

Send me $1 for one year's subscription to The Homestead, either new or renewal, and I will send you a pair of these pliers postpaid, free of charge. Send your order in at once, as this offer is good only during November. It will positively be withdrawn December 1st. Address

power of the veterinarian to vaccinate a farmer's hogs unless he so wishes.

As I did not go into detail on some of these points I can readily see where some of the readers have considered that I was turning tables, so to speak. It is impossible to give all details in an article of this kind due to lack of time and space, but inasmuch as there seem to be only a few who have been confused by these points I hope that this explanation will prove sufficient. A. L. Beverly.

INDIVIDUAL MERIT AND GOOD BLOOD.

To the Editor of The Homestead:

The success of any breed of livestock rests on the cardinal principles of merit and good blood. The achievements of all successful breeders of livestock clearly teach that he who attempts to establish a meritorious and permanent herd on any other foundation is building on the sand. Good blood does not necessarily mean that an animal must be bred along certain lines prescribed by dame fashion, but it is imperative that it should have coursing through its veins the blood of an ancestry that for many generations has proven its merit in the field of accomplishment. In different periods of Short-horn history, there have been bulls that proved wonderful sires that were not themselves sufficient individual merit to be prize winners in strong competition, but they had much more than ordinary quality and were the produce of ancestors of real merit. While the merit which they had inherited had not been intensified in a superlative degree in them, it was in their blood in such abundant measure that excellence of form and carriage was reproduced in their offspring.

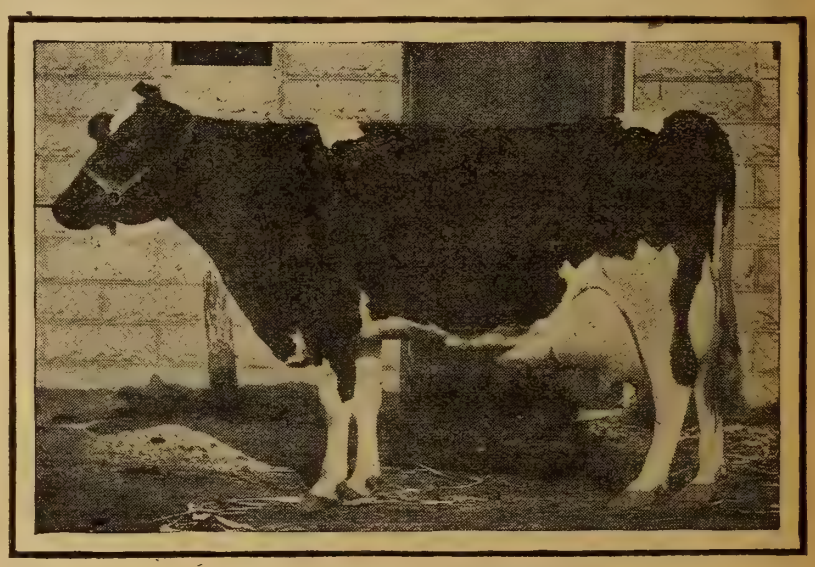
On the other hand, some bulls that have been noted prize winners have proven indifferent breeders. This, however, is the exception, the rule being that such rare merit will be reproduced, and the only safe method in selecting sires is to get the best that can be obtained.

Unfortunately this rule has not always been followed by many Short-horn breeders, for the reason that there are not always enough first-class bulls to supply the demand and some breeders will use a second or third-class bull of popular breeding rather than a better one of mixed blood lines. In consequence many strictly choice bulls have done only limited service in pure-bred herds or have gone to the range or the stock yards. Some ten months ago the writer decided to give a series of articles on some of the more prominent present-day sires and show bulls. Requests to the owners of these bulls for information concerning them met with a successful response from a few and no reply from others. In a previous article a brief record was given of the wonderful influence of Whitehall Sultan, Choice Goods, Cumberland and Cumberlands' Last. In this paper it is a pleasure to speak briefly of Avondale as a wonderful sire and a very successful prize winner. No other bulls of modern days have given to American herds as many herd bulls as Choice Goods and Whitehall Sultan, and the great merit of the latter sire is better expressed perhaps in Avondale than in any of his many worthy sons. In point of breeding nothing more can be desired, so the great success of Avondale as a prize winner and a sire of prize winners is not a matter of chance, but is the result of inherited merit coupled with intelligent management. He began his show yard career in 1905 when a calf and has been wonderfully successful. A complete and detailed list of his prizes would be too long for insertion here, but from a statement of his winnings at state and national shows from 1905 to 1910, county and district fairs not being included in the list, I summarize as follows:

Twenty-seven firsts, nine seconds, five thirds, eighteen champion and eleven grand champion prizes. This excellent record is being duplicated by some of his sons and daughters, which proves that his own merit is transmitted to his offspring. In fact, it is in the ring for get of sire where Avondale has been unusually strong. Private and public sales are the test of popularity of herd bulls, and judged by this gauge, Avondale has a most excellent standing. Twenty of his sons and daughters have been sold at an average of $1,230, and his produce for four years from 1909 to 1912 inclusive, sold at private and public sale, averaged $705. The value of such bulls to their owners cannot easily be estimated and the good they will do in improving and refining the breed is very great. There is no intention of lauding Avondale to the exclusion of other great bulls, but Short-horn breeders can afford to rejoice in the achievements of all such sires and to welcome the day when they shall be more numerous. But while the records of such bulls are a source of encouragement to all Short-horn breeders, there is also inspiration in the reproductive merit of thousands of cows of the breed, many of which are never known to history.

With the information about Avondale is some interesting data relative to three cows purchased by Carpenter & Ross, at the dispersion of E. S. Kelly. These cows were Imp. Avalanche 2d, Imp. Rosewood 86th and her heifer calf, Imp. Rosewood Pride. Imp. Avalanche produced three calves that were sold for $4,325, five calves from Imp. Rosewood Pride brought $5,980, and she has a 1913 calf at side, while six calves from Imp. Rosewood 86th have been sold for $5,630, and she and one heifer are in the herd. From these figures it will be seen that from the purchase of two cows and a heifer calf this firm has realized $12,935, and still has two cows and two calves on hand. There is certainly good money in choice Short-horn cows.

B. O. Cowan.



CUSHA NETHERLAND TWISK 85945.
Holstein cow owned by Elliott Bros., Woodward, Ia. See field note on page 37.

Since July 15th you can not legally ship hogs into Colorado, nor move them within the state, without making affidavit (which must accompany the shipment) that they have not been exposed to the infection of hog cholera and upon reaching their destination (unless for immediate slaughter) they must be kept away from other hogs for a period of eighteen days.

COMMERCIAL CLUBS AMONG FARMERS.

To the Editor of The Homestead:

Country life is the ideal life for the upbuilding of a strong physical and moral manhood and womanhood. It has been, sad to say, deficient in resources for the upbuilding or intellectual and broadening characteristics. This is not true in all localities, but in too many it is true. Farming, too, is not so productive financially as it once was, due to increased production and a larger increase in expenses, than in income per unit of products sold.

John Lee Coulter says, "Farm life is not what it should be, nor what it can be made to be, and it is not what it must be made to be if it is to be placed on a level with the city." From our own observation we all can see that the above statement is true. Wisconsin farmers are yearly moving to town.

"Help is too hard to get;" "Everything is so high, that we can't make it pay;" "My boys all went to town and I couldn't hire help to do the work," are the reasons we hear on every side.

The farmers' commercial club will prove to be a great factor in removing these objections to country life, for through such organizations the social and intellectual life can be brought to the equal of the city. Bright young men and women will be attracted to the farm, as a place of gaining a livelihood, health and enjoyment. Through these organizations better methods of farm management, soil, crop, livestock and road improvement can be discussed and cooperative associations organized to manufacture and sell their products and purchase supplies as well as furnish some of the comforts and convenience of life, such as the telephone, central laundry, etc.

Mr. Geo. W. Russell said in an address at the annual meeting of the Irish Agricultural Organization Society in December, 1909: "The fact is that farmers have allowed the control of their industry to slip out of their hands and they are squeezed because the organized industry always unloads its burden on the unorganized. If farmers are to retain a surplus of wealth beyond the bare necessities of life, if they are ever to see in the rural districts any of the comforts and luxuries of the city, they must make it their steady, persistent and fundamental policy to work towards complete control over the manufacture and sale of all of the produce of the countryside, its livestock, its crops, its by-products, and the manufacturing businesses connected with these, so that they can act in their own interests through their own agents in distant markets, and push their produce with the energy of self interest."

Commercial clubs among city business men have become to be a great factor for good in the cities of Wisconsin. The great good which they have done has been along many lines. They have brought new manufacturing enterprises of their cities, increased the flow of trade, improved the streets and parks, arranged social and educational entertainments for the public in general.

These clubs, however, are not so plentiful among the farmers of the state, due probably to the fact that farmers live too far apart to form these clubs readily. However, that a commercial club for entertainment, educational instruction and for improvement of the financial and social sides of life, can be organized among the farmers, has been aptly demonstrated at Baraboo, Wis.

In November, 1905, the farmers surrounding the city of Baraboo, Wis., met and organized the Skillet Creek Club. It has now seen eight years of very active existence and as we shall see has been a great power for good along many lines.

The present enrolled membership is seventy-six, the ages varying within the range of limitations prescribed by the constitution, which says: "Any person may become a member who is old enough to be interested and young enough to enjoy the meetings." The membership largely consists, of course, of adults.

The club was organized for social and educational entertainment, but in addition to this there has developed a closer fellowship which has permitted the operation of a co-operative creamery.

Mr. William Toole, one of the original members of the club says: "We feel that this community has been greatly benefited by our club, both socially and materially. Through essays, discussions and various intellectual efforts we have learned that there is a large amount of excellent literary talent among our members. In useful activities through committee work we have also learned that our members possess an exceptional amount of business ability. We have sought the good qualities of our members and have been abundantly rewarded."

The club has been helpful in promoting permanent road construction. The town of Baraboo is well in the lead in construction of macadam roads. The county fair is one of the cleanest and best in the state of Wisconsin and due, in a large measure, to the influence which this club exerted. The club has also been actively engaged in rural school improvement, and has taken in G. K. Davis, the county superintendent of schools, as a member. It was also active in the last election and succeeded in making the township of Baraboo a "no license town," in spite of the fact that Devils Lake summer resort is within its limits.

Through its efforts rural telephone lines have been established which have added greatly to the social and material side of the community.

An outside speaker is usually invited to address the club in order to bring in new and scientific ideas along lines of farm life and the business of farming. Among these have been Prof. R. A. Moore, Professor O'Cock and Professor Taylor, of the University of Wisconsin Agricultural College, and Presidents Smith and Snyder of the county training school. There have also been editors, city school superintendents, city officials, ministers and other professional men. Through their efforts the Sauk County Order of the Wisconsin Experimental Association and the Sauk County Life Association were formed.

Meetings are held every two weeks from November to April, and once a month during the summer. Included in the regular meetings are the banquet, the corn show, Halloween party, patriotic meeting, strawberry festival, Fourth of July picnic and ice cream social.

The usual plan of meeting is roll call, reading minutes of previous meeting, music, essay or discourse followed by a discussion of the subject presented, visiting intermission, music, recitations, subject for discussion, announcements, closing song by the club.

Among the subjects presented at recent meetings have been the following: Hogs for Profit, Walter Pierce; The Chicago Horse Market, Herman Zantow; Rural Life in Switzerland, Emil Baer; Housekeeping in England and America, Mrs. William Toole; Cooperative Laundries, Mrs. George Carpenter and Mr. H. Voll; Cream Tests and Over-run, Superintendent Toole, of the Excelsior Creamery; Gasoline Motive Power, R. R. Rodwell; Soil Fertility, E. H. Toole; The Railway Mail Service, J. J. Jefferson and The Dual-Purpose Cow, William Wichen.

It will be seen by the above list of subjects that this club must have a broadening effect on its members both in the investigation of the subjects and the discussion of the same.

The social, educational and financial benefits to be derived from such a commercial club are inestimable and it will prove to be one of the greatest factors in retaining for the farming community the bright, intelligent, young men and women, who are today seeking the more exciting life of the cities.

H. S. Hoard.

The Nebraska Corn Improvers' Association has announced that a state corn show will be held again this year and that large entries are promised in spite of the dry weather existing in certain parts of the state. The prizes to be awarded this year are large and well worth an effort and the program being prepared by the secretary of the association will be one of the best ever given during the winter meetings of organized agriculture, January 20 to 24, 1914.

Get My New Low Prices. Galloway Complete Spreaders

My New, Famous No. 5 60-70 Bushel Complete $79.50

My New Low-Down Spreader $89.50

30 Days FREE Trial

5-Year Guarantee

$25,000.00 Bond

Special No Money Down--No Bank Deposit--Keep Your Money in Your Own Pocket Offer

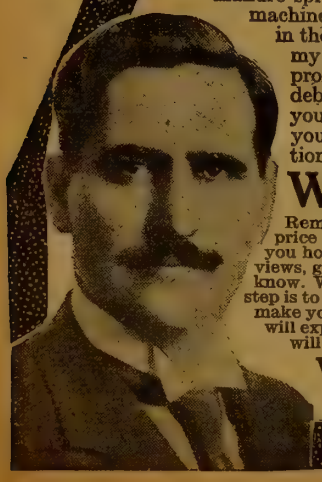
Listen! Here's a proposition that I will make you on any style Galloway spreader that I challenge any other manufacturer or firm to equal. I will ship you any Galloway spreader you select from my entire spreader line—nine different styles and sizes, and let you try it 30 days on your own farm any way you choose with the money in your own pocket. Isn't that a strictly free trial? All I ask is your bank reference—any responsible person can get a Galloway spreader on this never-before-heard-of offer. Yes, sir, and here's the kind of test you can give my machine. Test it out with heavy manure, light manure, well rotted manure, tough, strawy manure—any kind you have on your place—load it up a foot above the side boards and when you get out to the field, start your team on a trot and slam it in gear. That's a test that no other manufacturer dares to make you. But I mean every word. Give the Galloway that test entirely at my risk. The machine will stand it and never make a whimper. Now, if any competitor tells you the Galloway isn't a good machine, ask him to put one out alongside of my spreader and let you give it this "acid test." It's got to stand this test or it isn't as good a machine, is it? The Galloway has stood this test thousands of times and it has stood the test of over 40,000 users. It's not an experiment. It's a proven machine, covered by eleven special patented features that put it in a class by itself. Get my new catalog, giving all the facts. Don't buy a spreader of any other style or make until you get my new low prices.

Nine Different Styles and Sizes to Select From—

My Direct-from-Factory Plan Saves You $25 to $45

My direct-from-factory plan has saved the Farmers of America millions of dollars. Yes, sir, I am saving you and other business men farmers a million dollars a year. Because I sell everything, manure spreaders, cream separators, gasoline engines, washing machines, 19 different farm machines in all, that are made in the Big Galloway Chain of Factories, right direct from my factories to your farm. You have no middlemen's profits to pay, no salesmen's expenses or dealers' bad debts are tacked onto the prices of my machines. When you buy on my direct-from-factory, money-saving plan you pay only one small manufacturer's profit in addition to the actual cost of materials and labor that enter into the construction of the machines. And my plan backed by my immense volume makes my low priced and high quality machines possible. Try my plan. Save $25 to $45 right at the start on the best manure spreader made. The only spreader with endless apron, push board, roller-bearing feed, double drive chains furnishing power direct to the beater, adjustable features, etc. My attachment spreaders sell for $39.50 and up. My Complete spreaders for $64.75 and up. My Big Jumbo 80-bu. spreader for only $93.50 and my new, low down, semi-underslung spreader for only $89.50. Can you beat these prices? Never! Write today. Get catalog and new prices sure.

Here is My New, Low-Down, Semi-Underslung Spreader---the Best Light Draft, Two-Horse, Low-Down, Spreader Ever Built



Write for My New Spreader Catalog and Special Offer

Remember, on my plan of selling my catalog is my only salesman. It costs less than one-third the price of a Salesman's ten cent cigar to put one in your mail box. Get it. It will save you money. It tells you how Galloway spreaders are made, what they are made of, shows my big modern factory and interior views, gives you the whole facts. Facts that every business man farmer wants to know and has a right to know. We have no secrets. Get better acquainted with my money-saving plan of doing business. The first step is to send for my catalog. Then as a clincher I have a new, special co-operative, profit-sharing offer to make you that will help you get your spreader partly, or entirely without cost to you in the end. I will explain my plan in detail when you write me. A one-cent postal will bring my catalog which will save you many dollars. Send for it before you lay this paper down.

Silage for Sheep and Horses.

THE topic of silage has been one of long experiment and comment. Some years ago it was a common thing to hear people say that corn silage was of little value; in fact, some would even assert that it was not equal to our other rough feeds. Now we find that the advent of the silo has continued, its value is fully realized by feeders in general. Dairymen understand its part as essential in economical milk production. The majority of progressive dairymen here in Wisconsin have silos, and as silage has proven itself a benefit to one class of livestock, it is natural that men should reach out and seek to apply it to others. The internal mechanism of the cow is not widely different from that of a sheep or a horse. A feed that a cow can assimilate at a profit should be valuable as a feed for other classes of livestock.

It does not pay to maintain a silo for cattle alone if silage can be adapted to the use of our other farm animals. This has been the subject of much thought, not only to use silage as a succulent feed, but as a chief ration for sheep and horses. The results of experiments in the feeding of silage to these animals are probably not as widely known as they should be. If they were, it is my belief that farmers would derive added benefit from their silos.

There are always reasons why failure is pronounced on new discoveries, and we find this particularly applicable with silage. The first silos were built oblong, giving great surface but little depth. This caused moldy silage and silage which had become spoiled from contact with the air. This sort of feed proved a failure in most cases and the silo was not a success. But when the deep, air-tight silo was brought into use, the prospect became much brighter.

I believe that the greatest fault in silage making at the present time is the putting up of too green corn, the use of corn which produces great tonnage, but does not get mature enough. This causes too much acidity which is detrimental for feeding purposes. Investigation would show that this sort of corn has been used in nearly every instance where failure has been pronounced. I might give a brief outline of our experience with corn silage the past twelve years in feeding sheep and horses.

The first year we filled the silo with whole corn, which was planted thick in the rows and harvested when just beginning to glaze. The leaves and stalks were filled with sap, being grown on rich loamy soil. Although it gave us a heavy yield, the results were not the best. We started feeding it cautiously to all of our sheep, but when over one and one-half pounds were fed it had a laxative tendency and in some cases the younger growing lambs would appear sickly, showing papery colored skins and an unthrifty appearance generally. I might state that we fed clear hay and ration of oats and corn in connection with the silage.

The following year a more mature crop was harvested; and as a result, the apparent bad effects of the previous year were eliminated, and a two-pound ration was fed, showing good gains and thrift in the entire flock.

Since the first two seasons our corn has been run through the cutter, not because we thought it made better feed, but we could handle the crop at feeding much easier with practically no more expense.

We are now feeding sheep of all ages corn which had ripened enough for husking and is a fairly early maturing variety with leaves partially dried. Pregnant ewes and young stock received two pounds per head daily and ewes suckling lambs from two and one-half to three pounds, with the best results. I believe we could profitably feed of all this well-matured silage our sheep would consume with excellent results. Where silage has been pronounced a failure as sheep feed, nine cases in ten it has been caused by filling the silo with immature corn.

The experiment stations have been doing excellent work in carrying on experiments with the feeding of corn silage in connection with other feeds to sheep. Among the most valuable are those carried on at Illinois, Indiana, Michigan and Iowa, in most cases demonstrating that good silage was the most economical mutton-producing feed when fed in connection with other feeds.

The Illinois station is now conducting a second experiment with corn silage for fattening lambs along the same lines as one completed two years ago, when silage was substituted for corn and clover hay, with the addition that two lots are fed entirely without clover hay, but this supplemented by other nitrogenous foods. Professor Coffey states these lambs are as healthy and making as good growth as the others, although the experiment is not completed.

In the test two years ago at Illinois, five lots of sixteen wether lambs each were selected and silage fed in different quantities to each lot. Another lot was fed entirely on clover hay and corn. In every case the lambs having silage in their ration made greater and more economical gains than those fed on corn and clover, and in every case also the lambs fed the greatest amount of silage made the best gains.

There is one noticeable factor in this experiment which is very important. That is the general increase made in feeding; a sudden increase in feeding has been detrimental in many instances. I would like to illustrate this by using the data from that college. A fourteen-day preliminary period, followed by four twenty-eight-day periods, was for shelled corn 0.29,, 0.80, 1.07, 1.36 and 1.61 pounds respectively. Corn silage, 0.56, 1:19, 2.03, 2:58 and 2.62. Clover hay, 1.33, 1.04, 0.80, 0.63 and 0.38. The gains were greatest where the most corn silage was fed. Similar work has been carried on at Michigan, Ohio and Indiana.

These efforts are particularly valuable, because they have been long periods, demonstrating fully that there are no ill effects on the system of the lamb and mature sheep, which we find claimed many times by people who are not feeding silage mature.

The Indiana station recently stated that silage was an excellent feed for sheep being fattened for slaughter, also for pregnant ewes and ewes after lambing. This statement corroborates the experience of many a practical sheep breeder.

Our experience in feeding silage to horses has been similar to that of sheep. The poor results from feeding sour, immature silage was apparent. Since the first year or two we have been feeding a liberal quantity to our work horses, brood mares and growing colts with good results. We have never fed heavily to growing colts or brood mares. However, some of our most progressive farmers have been feeding as high as thirty pounds per day to mares suckling colts, and others have fed silage and oats as an entire ration.

It has been fully proven that moldy silage is dangerous. Pearson, of Pennsylvania, in investigating an outbreak where five horses had died, found that moldy silage had been fed, causing the deaths. Wing also reports the death of eight horses feeding on moldy silage. We see that, in view of such troubles, silage should be fed to horses only where sound intelligence is used.

Our conclusion is that silage is one of the most economical and successful feeds for sheep and horses, when it is made from well-matured and properly-siloed corn, and may be fed in almost unlimited quantities.—[W. A. McKerrow in Wis. Institute Annual.

And still the hen has the laugh on the fellows who persist in trying to manufacture a substitute to take the place of the genuine article in hen fruit.

Vinegar Easily Made at Home

Good Apple Juice, a Barrel or Two, and a LittleTime Will do the Trick.

A SUBSCRIBER from Cass county, Missouri, states that he has a quantity of cider, both sweet and hard, from which he would like to make vinegar. It is very doubtful if he can find a better method than that recommended by Dr. Van Slyke, of the Geneva Experiment Station.

When apple juice is left exposed to the air, according to Dr. Van Slyke, it is gradually changed, losing its sweet taste and giving off bubbles of gas more or less vigorously. The most prominent change is the conversion of the sugars into alcohol and carbon dioxide gas. This change is known as an alcoholic fermentation and is caused by a vegetable ferment or an enzyme which is produced by ordinary yeasts. Cells of the yeast plant are so widely distributed that they get into apple juice abundantly under ordinary conditions.

The rapidity of alcoholic fermentation depends largely upon temperature. In ordinary cellar storage, at a temperature of about fifty degrees F., it takes about six months to convert the apple-juice sugars entirely into alcohol. At a temperature of seventy-five to eighty-five degrees F., this time can be reduced one-half or more. The higher the temperature, the more rapidly the yeast plant grows and the more rapid is the fermentation. There is one serious objection, however, to temperatures above seventy-five degrees F., and that is the loss of alcohol by evaporation. This is favored also by the rapid escape of gas when the fermentation is very vigorous.

We have found that the alcohol in fermentation may be started more promptly and pushed along more rapidly by adding yeast to fresh apple-juice, especially when the temperature is between sixty-five and seventy-five degrees F. The use of any form of commercial yeast, if sufficiently fresh, will probably be found to give good results. I have actually used only Fleischmann's compressed yeast. The completion of alcoholic fermentation is generally indicated when bubbles of gas cease to come off vigorously.

After alcoholic fermentation is completed, another change takes place—the alcohol is converted into acetic acid, and the final object of the vinegar maker is the production of acetic acid. This change is brought about through the agency of micro-organisms called acetic bacteria, these being entirely different from those that change sugars into alcohol.

For the effective conversion of alcohol into acetic acid or of cider into vinegar, there are needed: Acetic bacteria, an abundant supply of air, and a temperature of between sixty-five and eighty-five degrees F.

There is commonly noticed in vinegar a very elastic, slimy, tough, transparent skin of a yellowish-white color; this skin is commonly known as "mother" of vinegar. This appears to be formed by the growth of the acetic bacteria on the surface of the liquid. When one skin has formed it settles sooner or later and in its place another is formed, and this formation and replacement continue as long as air is supplied under favorable temperature conditions and as long as unchanged alcohol remains.

Theoretically, we should obtain from 100 parts of alcohol, 130 parts of acetic acid, but for various reasons the actual yield is usually below 120.

The chief change that takes place in the acetic fermentation of alcohol is the taking up of oxygen by alcohol, which is thus changed into acetic acid. Hence air is an absolute essential.

Acetic fermentation as usually conducted by farmers, takes place more slowly than the alcoholic, often requiring eighteen months and in some cases two or three years. The most satisfactory results of acetic fermentation have been obtained by us at temperatures between sixty-five and seventy-five degrees F.

The rapidity of acetic fermentation can be greatly increased by introducing into the alcohol cider acetic-acid organisms in the form of "mother" vinegar. In a cool cellar, cider that had been thus inoculated by the addition of cider-vinegar or of "mother" reached marketable condition a year sooner than where nothing was added. This precaution must be borne in mind; Never add vinegar to cider in which the alcoholic fermentation is not completed, since the presence of the acetic acid greatly delays the alcoholic fermentation. Many farmers and vinegar-makers have an unwise practice of adding fresh apple juice to old vinegar, expecting to secure a more rapid formation of acid and then they complain that the cider won't work. The apple juice sugars must first undergo alcoholic fermentation before the acetic fermentation can begin. Therefore, by adding apple juice to old vinegar, the alcoholic fermentation may be not only delayed, but absolutely prevented.

The following is a practical method of inoculating cider with acetic bacteria: When the alcoholic fermentation has stopped, which, under favorable conditions, should be in one to three months, this "hard" cider is placed in barrels, by filling half full and then adding one-fourth volume of old vinegar. "Mother" of vinegar is then prepared as follows, and added: Expose in a shallow, uncovered crock or wooden pail a mixture of one-half old vinegar and one-half hard cider at eighty degrees F. In three or four days the surface should be covered with a gelatinous coating, which is "mother" vinegar. A little of this carefully removed with a wooden spoon or flat stick should be laid gently on the surface of the mixture of cider and vinegar prepared as described above. Do not stir it in, because the acetic ferment grows only on the surface where it can have an abundant air supply. In three or four days, the coating should spread itself over the entire surface. This coating should not be broken or disturbed as long as acetic fermentation is going along satisfactorily. When this method is followed, the vinegar should be complete and marketable in one to three months after the alcoholic fermentation is finished.

In vinegar factories, the fermentation of acetic acid is greatly hastened by the use of "generators," in which the alcoholic liquid is brought into intimate contact with a larger supply of air. The "generator" is a cask three to six feet in diameter and six to twelve feet high. It is loosely filled with beech-wood shavings, which have been especially prepared and then soaked thoroughly in old vinegar. The cider trickles over these shavings in thin films at a rather high temperature (about ninety-five degrees F.). The operation is completed in a few days. While vinegar thus made is likely to be more uniform than that made in casks, generator vinegar is inferior in aroma and taste. The longer process is necessary for the development of the delicate flavor, characteristic of high-grade cider vinegar. In the hands of the average man, who has not large amounts of cider to make into vinegar, these generators can hardly be regarded as entirely satisfactory in every way.

Figures gathered by the federal quarantine board of the United States Department of Agriculture show that during the past fiscal year 3,779,041 growing trees anad 15,040 pounds of tree seeds were imported into the United States. The trees include, say the members of the board, valuable species that do not grow in the United States and stock which can at present be bought more cheaply abroad. The tree seeds imported are largely for the purpose of reforesting land, though in a number of cases they are used in ornamental planting on individual estates.

Farmers of Australia have expended nearly $15,000,000 in an attempt to reduce the number of rabbits which are in that country highly destructive to growing crops. A wide range of methods have been used. Bacteriological experts have experimented with the view of introducing cholera germs among the rabbits. Poison has also occupied a prominent place. Some ports of Australia have exported 25,000 carcasses in a single year. Others refuse to dispose of them in that manner, preferring to consider them as an unmitigated nuisance from every point of view.

THE FIRST WINTER WITH DAIRY CALVES.

One of the tricks of a successful stockman is to take his calves through the winter without loss, and to do it economically, and, at the same time secure a good growth on the youngsters. This matter is really a serious one and a man who accomplishes well deserves to be called a successful stockman.

In the catalog of requirements, a calf needs feed, shelter, air, cleanliness and water. For feed we might say any good feed and plenty of it is sufficient. Alfalfa is undoubtedly the premier roughage for calves. It is nourishing in its elements to the extreme. It is palatable and the youngsters will eat a large amount of it and digest it well.

Silage helps mightily. Good feeders are coming to realize its value for calves more and more. Its freshness and juiciness keep the calf in health and thrift as well as supplying nutriment. A little variety of straw or clover will be appreciated by the calf and will subtract from the regular feed bill. Grain will be very highly relished, but it increases the expense. Sometimes if grain is cheap or if for any special reason the youngster seems to need it, a little may be allowable.

For shelter a place that will make the calf comfortable should be the ideal. It may be of straw or lumber, of sod or stone. If the shelter provides protection from wind, rain and cold, it matters not what the structure may have cost. Dryness and cleanliness underfoot are not the least consideration. In foulness or filth lurk disease germs and discomfort. Generous use of straw followed later by the manure fork will pay in the calf shed.

Then water is essential as the other features. One man who has made himself prominent as one who grows good stock has said that one reason for so many inferior looking calves is that the supply of water during winter is inadequate. There is truth in his statement, for on farms where feed is used lavishly sometimes growth is not secured to such an extent as might be expected. That has been often noticed where the watering place is inconvenient or difficult for the youngster to reach.

We have scanned the points mentioned above and will add a postscript in the form of an old Scotch adage, "The eyes of the master fatten his stock." Truly, above all, the man must give thought and attention to his calves. It will pay. Every time a man or boy takes a good serious look at his calves he will have some thought that will help him in better management. Scarcely can a cattle man secure a better compliment for himself or make a more creditable showing as to his ability than by turning out a bunch of nice yearlings that show that they have been wintered successfully.

PUBLISHED FOR WOMEN.

Following its policy to aid farm women the department of agriculture has recently issued a list of free publications which apply particularly to women's work. This list is furnished free on application to the editor-in-chief of the division of publications, United States Department of Agriculture, Washington, D. C., as are the bulletins which it describes.

There is one class of bulletins dealing with dairying, while others specially concern butter, cheese, cream and milk. Among the bulletins dealing with milk are the following: The Care of Milk and its Use in the Home; Ropy Milk and Cream; Bitter Milk; Clean Milk; Milk Supply of Cities: The Covered Milk Pail; Cost of Market Milk: Lacto, a New and Healthful Frozen Dairy Product. Bulletins on the subject, "Drugs," are entitled: Harmfulness of Headache Mixtures: Habit-forming Agents; Their Indiscriminate Sale and Use a Menace to the Public Welfare.

There is a set of bulletins dealing with bees; a set dealing with birds; another set dealing with such household insects as the ant and the flea. Guinea pigs, rabbits and rats also have each a bulletin devoted to them, and particular attention is given to poultry under the following heads: Poultry Accounting; Poultry Diseases and Pests; Ducks and Geese; Eggs; Poultry Feeding; Guinea Fowl; Incubation; Poultry Marketing; Pheasants; Squabs; Turkeys.

Farm conveniences in general have one set of bulletins to describe them, and farmers' institutes another. Hints on how to prepare foods over a wide range of subjects including apples, banana flour, bread, cereal breakfast foods, clams, coffee substitutes, and corn. There are twelve bulletins devoted to canning and preserving; while the fireless cooker is the subject of a separate bulletin.

In applying for these publications, first send for the list and then indicate from this the name of the series and the serial number of the bulletins or circulars that are desired.

HANDLING THE HEIFERS.

Heifers intended for cows should be kept growing rapidly until they become cows. It is not desirable to keep them too fat nor too thin at any time, though experiments have shown that dairy heifers kept fat milked practically as well as those kept in good growing condition. It is often said that heifers can "rough it" from the time they are six months old until nearly ready to calve; consequently, they are turned to the straw stack, given a little ear corn and stover and possibly a little hay. This is bad practice. While growing they need more protein than these feeds provide. Many of them become stunted by such treatment and never entirely overcome it. They do not require as much care during the winter seasons as the cows; but must not be neglected, if their best development is to be obtained.

In the spring, they should not be taken to the back pasture and left without being seen for a week at a time; but they should be seen and salted at least twice each week and to see them daily is better, because so many things may happen. They may get sick or injured or get out and do damage to crops and their breeding is liable to be neglected. If the bull is kept with them, the date of breeding is usually not known and recorded. What has been said about cows at pasture applies to heifers also.

While in the barn, it is a good plan to let heifers of the same age run loose in pens except when feeding, at which time they may be kept in stanchions. The proper time to breed heifers is when they are seventeen to eighteen months of age. Large, growthy heifers may be bred a month earlier. Heavy bulls should not be used on heifers without the use of a breeding crate. Special attention should be given them at calving time. If handled gently and often, they will be much more easily "broken" when fresh. —[Ohio Experiment Station Report.

THE CARE OF CREAM.

To the Editor of The Homestead:

Investigators have found that nearly all of the chemical and bacteriological changes in cream take place in the serum or milky part; therefore, the richer the cream the better it will keep, other conditions being the same. By skimming a rich cream, more skim milk is left at home for feed and there is also smaller bulk on which to pay express charges. For these reasons it is generally advisable to skim cream testing 35 per cent to 45 per cent butter fat.

Frequent experiments have shown that cool (low) temperatures will greatly retard the growth of most germs, and that cream quickly cooled will keep sweet much longer than when it is allowed to cool gradually.

The practice of adding cream to that which has been previously cooled is recorded as being extremely undesirable, because the warm cream raises the temperature of the whole mass sufficiently to start the dormant bacteria to activity, causing them to multiply rapidly, producing large amounts of acid and also other undesirable fermentations before the cream is again cooled to a point where their growth is checked. Warm cream should be thoroughly cooled before it is added to the cold cream.

The writer knows of dairymen who, because they realize the importance of quick cooling, and by keeping the cream in cans surrounded by ice-cold water until time for delivery, have worked up a trade for sweet cream which brings them fully twice the usual butter-fat price. It is well to remember that it is the cooling of the cream and not the mere fact of getting it into water that is the important thing.

If cream is stirred faithfully it will in a few minutes be reduced to the same temperature as the water in the tank, while if put into the tank without stirring it may remain warm for several hours. It is needless to say that just so long as the cream remains warm the bacteria which, even under the most sanitary conditions have gained access to the cream, will not be hindered in their growth. The vast majority of milk bacteria, however, grow very slowly at the temperature of ordinary cold water; hence the importance of cooling the cream very quickly.

In parts of this state ice may be put up at a very small cost during the winter. Wisconsin farmers should avail themselves of the opportunity and put up a supply for the dairy and family use. Aside from its use in the dairy there are many places where a supply of ice could be used to good advantage; such as for ice cream mak-

Let Me Send YOU
My Wonderful New
Galloway Sanitary Separator
On 90 Days' TRIAL FREE

I'm not asking you to buy it, understand that? I'm not asking you to buy this separator or even promise to buy it. I simply want to send it to you so that you can test it out right on your own farm free. I know what this separator of mine is. I know what it will do. I know that there isn't another separator in the world at any price that is even in the same class with it. I know these things because I have found them out by an actual, personal investigation of the separator itself right on my own modern dairy farm.

Why! when my own experts came to me and told me the results of their final tests on this machine on which they had been working for three years I'll confess I didn't think such things were possible. Now, after testing the separator itself, I know that they were justified a hundred times over in every claim made.

Now, I want to give you exactly the same chance I had. I want you to take this separator to your farm and test it in every way you can think of. Then, at the end of the free trial, if you can't honestly say: "Galloway, I wouldn't be without the machine you sent me at any price"—then just ship it back to me. I'll pay the freight both ways—the free trial won't cost you a single cent.

Save $25 to $50 on the First Cost Alone

If you do decide to keep the separator after the free trial, I'll let you have it at actual factory cost with only one small factory profit added. You pay no middleman's profit—I sell direct from my factory to you.

Write for My Great Special 1913 Offer

Positively the greatest offer I've ever been able to make. If you will write at once, I'll tell you how you may get one of these wonderful separators either partly or entirely free and without any work or canvassing either.

Cow Book FREE!

If you write at once I'll send you a copy of the great Galloway Cow Book absolutely free. The only book of its kind in the world. A complete manual of dairying for the farmer. Worth hundreds of dollars—priced regularly at $1.25. I'll send it free and postpaid together with my big separator catalog and full particulars of my great offers if you'll just send me a postal or letter RIGHT AWAY. Write today—NOW!

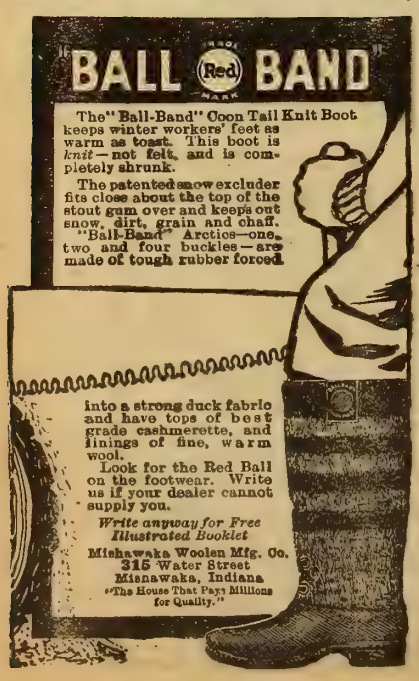
Monroe Wisconsin.



ing and for cooling the refrigerator so much desired by the housewife on the farm.

While the cream is cooling, the lid should always be removed from the can, thus giving the animal odors a chance to escape. A clean, dry cloth may be substituted as a protection from flies and dust. No vegetable or any substance having strong odors should be allowed close to the cream, as such odors are readily absorbed.

The cream should be delivered not less than three times a week during the summer. If the cream is hauled to the station early in the morning and the cans protected by covering with a wet sack while on the road to the creamery or station, the farmer will be enabled to deliver the cream at a much lower temperature than would otherwise be possible. During the winter time the cream need not be delivered oftener than two or three times a week.

Some one has well said: "Clean cream, cold cream, and rich cream are the three words which tell the secret of producing good cream."

D. E. Mowry.

A PAIR OF GOOD GRADE COWS.

One of our subscribers is very proud of the record that has been made by two cows. The story comes from a lady subscri..., therefore its accuracy will not be questioned. The milk from these two cows during the month of October supplied a family of five with all the dairy products that were used. The butter made was weighed and eight pounds were used, though the milk and cream consumed in the home were not measured. In addition the cream check for the month, that is, the income from the surplus cream sold, amounted to $29.50.

It may be of interest to add that one of these cows had freshened last January and the other one in March so that this record was made well along in the lactation period.

If there are any of our readers that are doing as well or better than this in their daily operations we shall be pleased indeed to hear from them.

THE BULL AND THE COMMUNITY.

To the Editor of The Homestead:

Another feature of the helpful influence of a high-class bull is the influence of the bull upon other herds of the locality. For that I am going to draw from my own experience again because I am so familiar with the details. A dairyman in a western state asked me to purchase a bull for his grade cows. By good fortune I was about to take a trip through a notable dairy district. By stopping off I located a bull whose dam had produced 631 pounds of butter fat in a year and whose half sisters were showing remarkable records. The price was higher than my dairyman friend contemplated paying. However, upon my return he was easily persuaded to stand the additional expense. I made use of the local papers to inform the public of the purchase of the bull and his arrival. The reporters lauded his merits and scarcely was the bull installed in his new quarters before the demand for public service was more than he could care for.

In many localities the excellent dairy cattle to be found can be credited to the influence of one or a single line of good bulls. Truly a meritorious bull is a blessing to the community and a man who purchases a bull that will increase the dairy qualities of the stock of that community is confering a blessing. H. E. McCartney.

SOURCES OF INFORMATION.

Regardless of the fact that the term 'book farming" has heretofore been more or less a term of scorn in the minds of many men who farm, the number of books which are being read by farm people each year is rapidly increasing. When it comes to accurate, reliable information easily obtained it is doubtful if any books on agriculture are superior to the "Farmer's Cyclopedia of Agriculture" and the "Farmer's Cyclopedia of Livestock," compiled a few years ago by Wilcox and Smith, of the United States Department of Agriculture. Each of these books is filled with valuable information compiled from books and bulletins published in all parts of the country. If a man wishes some information regarding some point in the breeding of livestock, the treatment of some disease, the marketing of some certain breed, or the general feeding and management of the various kinds of livestock, he has but to turn to one of these volumes to find this information readily at his command.

In the "Cyclopedia of Agriculture" information is as readily accessible whenever one wishes to consider the recommended methods of handling various crops. Advice on the seeding, cultivation, harvesting and handling of practically all the crops grown in the United States, together with the discussion of insect pests and methods of controlling them, are contained in this volume, and what is most important of all, are easily looked up. The regular publisher's price of the "Farmer's Cyclopedia of Agriculture" is $3.50 and "The Farmer's Cyclopedia of Livestock" $4.50. They may be obtained from this paper at the prices named.

FALL GARDEN PLOWING PROFITABLE.

To the Editor of The Homestead:

All the droppings from the poultry-house and some of the finer manures from the stable stalls are carried out and scattered over our garden from now until the weather threatens to freeze the ground, when we clean up all the weeds, dead vines, and all decaying garden truck, removing or burning it. We always save this for fertilizing purposes, hauling it to some field about the farm, or it may be transferred to the compost heap, but in any case, it should not be left where the garden spot will be next year, as it is pretty sure to be infested with insect pests, their eggs for next season's hatching, and various fungous diseases peculiar to garden truck.

After this refuse is all removed, we take a common garden rake or hitch to the harrow and level down any spots of manure that have collected in heaps, which gives the dressing an even distribution over the ground. We then stir the ground thoroughly to a depth of from eight to ten inches. This confines the manure where none of its fertilizing elements will be washed away, and where the alternate freezing and thawing between now and next spring will thoroughly disintegrate the larger dirt and manure particles till the fertilizing components of the poultry droppings will have entered the texture of the soil. This winter and next spring we again give the garden another thin surface dressing of manure and again stir the ground thoroughly, just before garden-making time, which throws the fine, rich soil to the surface for a seed bed, and turns another deposit of manure under, to form a veritable hotbed for supplying the plant life above it with nourishment.

Worth Co., Mo. M. Coverdell.

At the London (England) Dairy Show held a short time since, 286 cattle were exhibited. Of these, 125 were Shorthorns, 55 Jerseys, 19 Guernseys, 19 Red Polls, 6 Ayrshires, 9 South Devons, 5 Kerries and 38 cross-breds. In comparison with the 50 cattle which made up the Iowa Dairy Show at Waterloo a few weeks since, the English show seems to be lacking in numbers. The exhibit, however, covered a wider range than do our dairy shows. In addition to the cattle, there were milking and butter tests, goats, poultry, pigeons, cheese, bacon and hams, skim milk, bread and honey, new and improved inventions, roots, butter-making contests and milkers' contests. In the making of butter, however, they certainly excel our shows, 549 entries having been made.

Recent tests of Holstein-Friesian cows in England produced one case in which the fat percentage was 7.1 and another in which it was 6.1. The London Livestock Journal in which the statement appeared insists that the reason for the unusually low test of cattle of this breed is that the Hollanders are retaining carefully their best cattle and parting only with those of an inferior sort.

At the late American Royal a yearling mule made a new record in mule valuations by selling for $550.

For ANY Barn

A New Carrier For Both Rigid and Rod Track

JAMES 2-in-1 Carrier

Rigid and Rod Track Combined

A combination that offers all the advantages of the rigid track inside the barn—all the advantages of the rod track outside.

It enables you to use, inside the barn, the celebrated JAMES I-beam track, bent to any curve without use of heat, with JAMES simple switches and a raising and lowering carrier.

"Button-on" hangers make the I-beam track easy to erect.

Tub lowers by its own weight; is kept under perfect control by JAMES friction brake and clutch.

While filling tub carrier "stays put"—moves only when you push it, because track cannot sag.

Outside the barn you use the rod track. Stand at the door, give carrier a shove; it runs out, dumps itself at proper point, and returns automatically to the barn. *Never fails to dump.*

Cannot jump either the rigid or rod track.

We make carriers for rigid track—carriers for rod track—also this combination; all backed by the proved national success of JAMES Sanitary Cow Stalls, Stanchions, Pens, Ventilators, etc.

Get the facts before you invest a dollar in carriers.

PURE BRED HOLSTEINS
AT AUCTION
SO. OMAHA, NEB., DEC. 2, '13
50 cows and heifers. 12 bulls including **Kalmuck Skylark Johanna**, the greatest son of the great Katy Gerben. There will be a lot of daughters of Sir Veeman Hengerveld, and granddaughters of King of Pontiac. Send for catalog to Corn Belt Holstein Sale Co.
A. L. HAECKER, Mgr., LINCOLN, NEB.

Pure-bred Registered HOLSTEIN CATTLE

Last year a California Holstein made a yearly record of 784.13 pounds of fat from 25,981.8 pounds of milk.

After an interval of two months she began another yearly test which has just come to a close with a record of 868.1 pounds of butter fat from 28,826.4 pounds of milk.

These two successive yearly tests during which 54,800 pounds of milk were made are more evidence that great records are not spasmodic efforts, but represent capacity permanently developed.

S. C. Buff Orpingtons, cocks and cockerels, $5 up; hens and pullets, $2.50 up. No cheap ones left. Address GLYNN POULTRY YARDS, Cascade, Ia.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

A WELL-CONSTRUCTED POULTRY HOUSE.

"A. T. J.," Iowa, submits plans for a new poultry building that, considering the climate, is a good basis for the future home of his flock. In a recent communication he says:

Have constructed a new poultry house 15x30 feet, using concrete for three walls—rear wall six feet high, front eight feet high. Front wall is of drop siding, with a continuous row of 20x24 inch window lights, full length. Above that, fourteen inch space, length of building, covered with poultry netting inside, and with cheesecloth outside. Roosts across building three feet from floor. Cost of material was only about $90. In your opinion are there any objections or drawbacks in such a house?

There are many different good plans for poultry buildings, and each one has its champion. The long house, such as our inquirer describes, is probably favored by more poultry raisers than any other one kind. A house built on this plan may be enlarged at will, by the addition of only three walls and roof.

One of the most prominent poultrymen in this country would not accept a concrete poultry house as a gift, while many experiment stations are using them with complete success. The only objection to concrete is the tendency to dampness. The new building in question is so planned as to overcome this fault, and many poultry keepers, who educate their children with the poultry proceeds and must use indifferent poultry houses, would be glad to take the risk of such a house.

There are no serious objections or drawbacks, but some of the features might be improved: The cheesecloth is all right for ventilation, but would be preferable if tacked to a frame that could be raised or lowered in summer and pleasant winter days. There is much being said about glass radiating cold; a reaction, perhaps, from some overenthusiastic person trying to turn his poultry house into a green house. The glass is all right, especially if there be a big box directly under, filled with good fresh soil. Second only to the dust box should be a place separate from the perches, where litter may be placed to keep the fowls busy on days that are too stormy to be out of doors. If the perches are in the rear of the building, as of course they are, a board one foot high would keep the feed and scratching place separated from the droppings. The perches are a suitable distance from the floor, and will reduce the danger of "bumblefoot" to a minimum.

If a shingled roof, the slant is not steep enough; the roof would be easier changed than the walls, by the addition of some material impervious to water, like a good grade of rubber roofing for the purpose. Steel is used to some extent, but not to be recommended—it is hot in summer and cold in winter.

PERITONITIS IN FOWLS.

One of our Iowa subscribers, Mrs. J. L. Mathews, is very much concerned about her farm flock of fowls, including chickens, turkeys and geese. In a communication to this paper she says:

For some time I have wished to ask this paper a question in regard to my poultry. I have been losing my chickens for three months. Have lost every one of my herd of geese, and am now losing my turkeys. Just lately I have been cutting the fowls open, and find the livers to be very large, crumbly and seemingly ulcerated. Also, there is a yellowish watery fluid among the intestines. The chickens and turkeys have a diarrhea similar to cholera, being yellowish green in color. Some of them have a very large gall and it is completely full of bile. Are geese subject to diseases that other fowls are? I never lost any geese before in my life, and am completely at sea about it. The geese would seem all right one day, and the next would just stand in one place until they died, usually the same day. Can you tell me what is the trouble, the cause and what to do for them?

This paper desires to be of service to its readers, and earnestly hopes that all will come with their perplexities and troubles. If our correspondent had not delayed so long, she might have taken measures to check the trouble that is depleting her whole flock of fowls. The above amount would very accurately describe any one of the several ailments, only that she made a post-mortem and found liquid among the intestines. This condition proves beyond a doubt that the immediate cause of death is from peritonitis or poisoning.

When one hears the word poisoning it is in order for the mind to revert to some poisonous substance. While this is often the cause it will hardly fit this case, unless it be from tainted or moldy feed, causing slow poisoning. The condition of the livers indicate a long duration of the trouble; so we must go back, back many weeks or months, to the time when the flock was too liberally fed on carbonaceous feeds, too little of succulent or green feed, and did not have adequate exercise. If poultry people would only realize that this combination soon puts that important organ, the liver, out of commission, many complications might be avoided.

The liver has work to perform in the assimilation of food; when it becomes congested it is an abnormal organ and cannot perform its duty. Congestion is followed by inflammation; the liver becomes enlarged and tender, often crumbling to the touch. This condition, if the fowl survives long enough, passes to the last stage, which is called biliary repletion. The gall sac becomes so extended with the surplus bile as to penetrate the adjoining organs, as in the case of the fowls in question, causing poisoning and death.

This description is given, step by step, because the only treatment worth while is that which begins with the flock as a whole while yet in good condition. All too many fowls are killed by mistaken kindness. All too many flocks are wiped out or rendered useless by having access to corn at all times. The professional poultry keeper, who must buy his grain rarely has trouble of this kind.

Geese rarely contract disease, their indisposition being almost wholly due to adverse conditions. This trouble is not "catching" only so far as what causes one to become afflicted causes all the flock to go wrong.

Those who are yet in the first stages may be saved by cutting out all feeds containing fat or starch. Feed sparingly of grain, wheat being preferable; a variety of green feed, skim milk, into which one grain of aloes for each fowl is placed, and make arrangements for adequate exercise. This latter may be brought about by scattering the grain in deep litter, requiring the fowls to work or go hungry.

EGGS IN COLD WEATHER.

To the Editor of The Homestead:

A warm comfortable house is of first importance. If the hens are not provided with comfortable quarters during the winter months they will not lay many eggs, no matter how favorable the other conditions are.

Hens must have care, more or less, the year round, but, as a rule, in summer, they can pick up the greater portion of their food in the fields, provided they have free range. The hens need a little grain, even during the summer months. The molting season is coming upon them, and if they are kept in a thrifty condition, it will not be so great a strain on their vitality.

Be sure that the hens are sheltered from the cold on frosty nights—especially those who have lost many of their feathers. Perhaps they have been roosting in the trees during the sultry summer months, and will still insist on doing so, but it should not be allowed. If only a few hens are late in molting, it is a good plan to place them to themselves and feed such feeds as will fatten; the idea being to fatten and market the very late molters. Of course, there are some exceptions to the rule, but late molters seldom make good winter layers.

It is a difficult matter to induce the hen that has been a constant summer layer, to molt at the right time.

The hens should roost in the houses in summer as well as in winter, provided they are well ventilated. Hens do better when there are not more than fifty or sixty in each house. Fifteen by thirty-six feet is about the right size for this number, though it might shelter a few more. A small apartment should be attached to each room for storing small quantities of grain, grit, etc.

The roosts and nests should be removable. Dry earth or coal ashes should be scattered under the roosts, so the droppings may be easily removed, and used as garden fertilizer.

Keep everything as clean as possible. Cover the floor several inches deep with straw or litter. It will not be necessary to change it very often, except in very severe weather, when the hens must be confined.

In building the house it is best to use heavy material, covering the

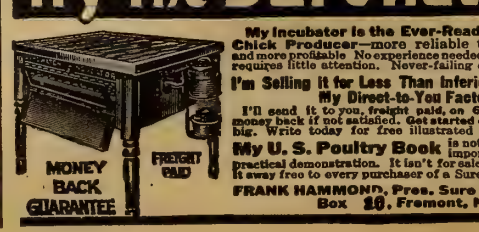
Try The Sure Hatch at My Risk



My Incubator is the Ever-Ready, Ever-Dependable Chick Producer—more reliable than the setting hen, and more profitable No experience needed. Automatic in operation; requires little attention. Never-failing even in freezing weather.

I'm Selling it for Less Than Inferior Machines Cost—at My Direct-to-You Factory Price

I'll send it to you, freight paid, on 60 days' free trial. Your money back if not satisfied. Get started early to make your profits big. Write today for free illustrated catalog and low prices.

My U. S. Poultry Book is not a catalog, but a book of important facts. Proven by practical demonstration. It isn't for sale at any price. I'm giving it away free to every purchaser of a Sure Hatch Incubator.

FRANK HAMMOND, Pres. Sure Hatch Incubator Co. Box 26, Fremont, Nebraska.

cracks on the outside with narrow strips of same material. The interior may be whitewashed, filling up all the crevices, and giving the house a nice appearance, as well as making it sanitary.

Make large windows in the south side fitted over with fine mesh poultry wire. Unbleached muslin may be tacked over these in severe weather, thus giving plenty of ventilation, and yet preventing a draft.

If the old houses are to be repaired, or new ones are to be built, now is the time to begin, before cold weather sets in. Clean old houses thoroughly, before beginning repair, being sure that they are free from vermin. The lime-sulphur application, same as is used for fruit trees will exterminate the lice.

It pays to take good care of the hens. In our local markets, the eggs sell all the way from 20 to 40 cents per dozen during the winter. Of course it takes feed to produce winter eggs, but there is good profit in them at the present prices.

When the first cold weather begins, the hens should be fed a little whole grain each morning. Not full feed—just enough to keep the hens hungry. After this, give them a drink of warm skim milk or butttermilk, and follow with warm, clean water. Give them free range if the weather will permit.

Feed some kind of feed stuff at noon. If cabbage is obtainable, no other feed will be necessary. The hens will relish raw turnips, beets, mangels, potatoes and apples. These may be fed more economically when chopped into small bits. Use troughs for all such foods. Boiled oats added to the chopped vegetables are good. Give them what they will clean up and no more.

Give the hens a supper of sheaf wheat scattered over the floor. This gives them exercise while scratching for their feed.

Do not confine the hens unless it is necessary, yet it is better to keep them up for weeks and properly care for them, than it is turn them out where it is so cold they have to sit around in bunches, huddled together. When the weather is severely cold, and the ground covered with snow, the fowls are better off in dry, comfortable quarters. The poultry raiser who allows his hens to roost any old place they choose, drink ice water or eat snow for water, and feed just when it becomes convenient, will never get winter eggs. Warm the corn that is given the hens, if it is frozen; give them all the clean, warm water they will consume, provide grit and green feed and feed in proper quantities, and you will have singing, cackling and laying hens, while the neighbor who permits his hens to "rough it" will be grumbling because his hens do not lay an egg, when eggs are so high.

Illinois. E. E. Rushing.

BUY NEW STOCK EARLY.

To the Editor of The Homestead:

Few people there are who do not buy new cockerels each year to get fresh blood. All too often though, they consider a "rooster just a rooster" and add different breeds and colors to their flocks, thus running their stock down in size and egg production.

Then there is another kind of poultry raiser and this is a concrete example: A woman, by hook or crook—mostly by crook, I think—got a flock of practically pure-bred fowls together and, of course, needed new stock to head her hens another season. Early, she began to juggle, pricing the stock of all neighboring flocks, and there was a goodly number of desirable ones, too. She finally sought the proprietor of the best stock within reach, and he offered her some big, pure-bred cockerels, candidly telling her that they were off in some minor point, at $1 each. The birds weighed nine pounds, or one pound over standard weight, and were worth nine cents per pound on the market. She flatly turned down the generous offer; that 19 cents was so near to her eye that she couldn't see the pounds and pounds of marketable poultry in jeopardy another season.

Late in this season, she triumphantly announced that she had bought some "splendid cockerels of the poultry buyer at 45 cents each." They were of the same color as her own, pretty fair lookers, but contained only one-half the blood of her own particular kind of chicken and the other half showed up in her youngsters the next autumn when the selfsame buyer, who sold her the cockerels, bought her surplus cockerels. They weighed only four and one-half pounds each, and she politely informed him that she didn't believe there was an honest poultry buyer on earth.

A few breeders swing too far the other way and wish the "best stock that money can buy," regardless of the fact that the highest priced stock has no place for the utility man.

Every farm flock should be headed by big, vigorous pure-bred cockerels of any preferred breed. They can be purchased of a reliable breeder at from $2 to $3 each early in the season—possibly a trifle less from a nearby flock. It is worth something to correspond, crate and run the risk of fowls suiting a far-away purchaser.

Poultry people, for the most part, do not purchase new stock until they dispose of their own surplus males, which, as a rule, run until after the holidays. With few exceptions, the better class of breeders are sold out before Christmas, and after that the chances dwindle to get desirable birds.

Subscriber.

BLACKHEAD IN TURKEYS.

R. C. Hall, Iowa, describes his flock of ailing turkeys, and the experienced poultry keeper can almost see them with his eyes shut. Mr. Hall says:

Can you tell us what is the matter with our turkeys? They stand around with drooping tails and wings, the feathers ruffled up, the head dark and the droppings are white and watery. An early reply would be very much appreciated.

For the most part, young turkeys have always been rather delicate, and hard to raise. However, the adult turkey is subject to few diseases; to one ailment is almost the whole turkey loss due—"blackhead." There is a long, imposing name for the microscopic organisms, which has no bearing whatever in the case, and would be forgotten, even if it could be pronounced.

Blackhead attacks both old and young turkeys, being especially fatal to the latter. It produces no external symptoms until the advanced stage is reached. This fact makes it doubly hard to combat. When the victim loses its appetite, keeps apart from the rest of the flock, the wings droop, the head and comb turn dark and diarrhea sets in, the bird has been afflicted many weeks, possibly months.

Turkeys should be carefully watched, and if one begins to get slow, always bringing up the rear, better get busy and hold a post-mortem. If the liver is enlarged, marked with white or yellowish spots, the ceca—"blind gut"—inflamed and plugged with pus, it is blackhead, and the turkey is doomed. In a few instances they recover, and to the detriment of the flock, unless they are disposed of before the breeding season. Turkeys that have been afflicted with this dreadful disease, will produce weaklings.

During the course of the disease, the parasites multiply in the ceca, get mixed with the intestinal contents, and become discharged with the excrement. In this way the contagion is spread, not only through the food and water, but in pastures, and wherever they range. For this reason every ailing turkey should be promptly isolated. Give epsom salts, one teaspoonful, to three turkeys, followed by sulphur ten grains, sulphate of iron one grain, sulphate of quinine one grain. The latter prescription is a tonic, and the amount for only one turkey.

This disease is so obscure, so difficult to handle, that profitable turkey raising is practically impossible, where it has once become established. However, there is hope in the fact that the results of the scientific work now being done at our experiment stations will help control this disease, as they have the more common poultry troubles.

There is no better time to get a start in pure-bred stock than in the autumn. A good pen, or trio, purchased now, and rightly cared for, will make a splendid foundation for a future flock. The second year from starting would give one a flock large enough for the average farm. Taking it all in all, it is the cheapest and best time.

POINTERS

—Mrs. J. A. Rice, Hillsboro, Iowa, has big-boned White Holland turkeys for sale. Her advertisement appears on page 22.

—On page 22 appears the advertisement of Elza Nolin, Monroe, Iowa, offering White Wyandotte cockerels and yearling hens for sale.

—Mrs. C. H. Schmidt, R. 1., Tripoli, Ia. advertises White Holland turkeys on page 22. She offers healthy, vigorous birds at the most reasonable prices.

—On this page of The Homestead will be found the advertisement of Murl Edwards, Rockbridge, Ill., offering Single Comb Brown Leghorns for sale.

—When wishing White Holland turkeys, White Pekin ducks and White African guineas, consult the advertisement on Edw. Dooley, Selma, Iowa, as appears on page 22.

—The Glynn Poultry Yards, Cascade, Iowa, can supply Homestead readers with Single Comb Buff Orpington cocks, cockerels, hens and pullets. The advertisement appears on page 22.

—A choice lot of Singe Comb Brown Leghorns and Single Comb Rhode Island Reds are offered for sale by Mrs. A. N. Bonnett, Birmingham, Iowa, in her advertisement on this page.

—F. H. Hassler, Manning, Iowa, breeder of Buff Plymouth Rock is advertising cockerels on page 22. He informs us that he raised 250 extra good birds this year and that every lot of them are from show stock foundation. He is able to furnish good color and good size stock at the remarkably low prices quoted in his advertisement.

—Mrs. P. W. Reece, Elmore, Minn., can supply Homestead readers with choice Rose Comb Brown Leghorn cockerels, at very reasonable prices, as named in her advertisement on this page.

—E. H. Bente, Elkader, Iowa, is quoting prices on White Holland turkey toms, Embden geese ganders, Pekin duck drakes, White Orpington, Wyandotte and Leghorn cockerels, in his advertisement that appears on page 22.

—Mrs. S. E. Newell, R. 6, Audubon, Iowa, offers for sale black and white Langshans, Single Comb Buff Orpingtons, Light Brahmas, Rose Comb Rhode Island Reds and Mammoth Bronze turkeys. See her advertisement on this page. She informs us that she has a large number of choice birds and that after Dec. 1st, she will be able to furnish score cards for those who want scored birds.

—Frank Nash, Minden, Neb., is offering S. C. White Orpington cockerels at the present time and he sure has a fine lot of birds to select from. This is one of the oldest flocks of the high-class White Orps. in the West and while all birds offered for sale are unscored, there are many that will score high. The prices are right, being from $1.50 to $2.50. Only a few at that price and a really good cockerel can be had for $2. Order at once and save delay. See advertisement on page 22.

—J. A. Holmes, Steamboat Rock, Iowa, breeder of Single Comb Rhode Island Reds, in furnishing copy for his advertisement found on this page, writes: "I culled my flock close this spring and, therefore, have not as many birds as usual. However, I find that they are by far the best I have ever raised, and in order to reduce my stock before cold weather have decided to offer a limited number at very low prices considering quality. I guarantee satisfaction and will cheerfully refund money paid for any of my stock if for any reason purchasers are dissatisfied."

WRITES LETTERS UNTIL MIDNIGHT

THEO. MARTIN, Bellevue, Iowa, breeds Barred Plymouth Rocks, and began to advertise them in The Homestead. Now he says: "In the same mail with the copy of The Homestead containing my advertisement came an inquiry for the birds. Every mail since has brought inquiries, and I have to stay up until nearly midnight answering letters from seemingly everywhere. If all order who wrote, I will soon be sold out." Most patrons of The Homestead have the same success. Breeders who have birds for sale should obtain advertising rates. Address

CLOTHCRAFT

To the Man who wants Clothes-Satisfaction

You don't have to buy a Clothcraft suit to prove its value—simply try it on. You know whether clothes fit you or not, whether they have style and correct shape and attractive fabric or not.

The photograph

All-wool, durability and shape-retaining qualities are other matters—not to be recognized by a look. So they are fully guaranteed, by the dealer and by us, in every Clothcraft garment.

Here are the only ways we can show Clothcraft Clothes in pictures. One is a drawing from life, the other a photograph. Same man, same overcoat in both. Try on a Clothcraft overcoat before a mirror, and it will look as well on you. The style and fit and good appearance of Clothcraft are in the clothes—not just in the pictures.

Men who have never worn Clothcraft may consider our claims extravagant, as the clothes sell at only $10 to $25—the only guaranteed all-wool line at those prices. But when you try on a suit, ask about the guarantee.

Write us for an introduction to the Clothcraft Store. We'll also send the new Style Book and tell you about *No. 4130 Blue Serge Special*—the best all-round suit we can make at $18.50.

In and Around Wisconsin

BRINGING with him a new forage plant which he discovered on the Siberian steppes near the Mongolian border, Prof. N. E. Hanson, of the South Dakota Agricultural College, has just returned from his fifth trip to Russia and his fourth to Siberia. He visited in La Crosse while on his way home. Professor Hanson is enthusiastic about his new forage plant. He discovered it while looking for Siberian varieties of alfalfa, suitable for the extreme temperature changes of the Northwest. He believes that the new plant will thrive under higher temperatures in summer and lower in winter than any known in this country. Professor Hanson refused to give any description of the plant before making his formal report to the college.

Three school districts in Walworth county have been combined and an automobile conveys the children to school. They do not have to leave home so early in the morning or arrive at home so late at night as when walking to the district schools.

From $12 to $14 per ton is being paid for cabbage to Brown county growers and large shipments are being made. An Eau Claire county farmer this year realized $1,361.83 on cabbage, an average of $170.23 per acre.

The Mulefoot breed of hogs, said to be immune from hog cholera, is being introduced into Richland county, where hog cholera has wiped out the entire herds of some farmers. Some have even had to purchase hogs at the stock-yards for home consumption.

The new piece of concrete road across the bottom east and west of the river bridge on the state road west of Brodhead has been pronounced an excellent piece of work. The concrete is eighteen inches deep and nine feet wide with five feet of macadam on either side.

Heavy yields of clover seed are reported from several parts of the state. In July, R. E. French, a Langlade county farmer, cut seventeen big loads, aggregating twenty tons, of alsike clover from nine acres. In September he harvested a second crop from the same tract, threshed it, and obtained a yield of twenty-six bushels and twenty pounds of seed. The seed was worth $12 a bushel, making the second crop worth $318 or $34 per acre. R. H. Thomas, a farmer in the town of Delavan, Walworth county, secured a yield of 178 bushels of clover seed from thirty-seven acres, and A. C. Baken, residing near Reeseville, Dodge county, was recently paid $182.40 for nine bags of the seed.

The Farmers' Co-operative Creamery Association of Tomah has awarded a contract for the construction of an addition to their creamery, 48x72 feet in dimensions. The building is to be completed in March and will be equipped with the most modern butter and ice cream making machinery.

A ginseng and golden seal nursery will be one of the attractions next year at the Druggists' National Home at Palmyra.

Although many of the fields on the Starks Company potato farm near Rhinelander were injured by the blight last summer 35,000 bushels of fine potatoes were harvested from the 400 acres planted, and they will realize over $17,500 from them, even at the present prices, thus paying for the land the first year, and all for the expenses of clearing, planting, and harvesting. Not less than 600 acres more will be planted next year. Adam Helper, a farmer near Pardeeville, raised 1,784 bushels of potatoes on six and a third acres this year, and figuring at the price of 45 cents per bushel, the crop was worth $86 per acre. W. H. Webb, of Superior, has bought two tracts of land at Woodrow Spur on the Soo Line and will plant about half of it to potatoes. On one tract is an old lake, the shores of which are covered with thousands of tons of peat. Several hundred tons of this will be spread on the land next spring and plowed under. Phosphate and lime will be added as needed.

Buyers are making a rush for the 1913 tobacco crop in all sections of the state where the leaf is grown and prices are running from 12 to 15 cents. Rumors are current of sales at 17 cents a pound. In a very short time the entire crop will have been taken out of the hands of the growers. Even damaged leaf brings 8 cents a pound.

Chairman E. G. Boyden, of Pittsfield, has finished one of the biggest jobs of removing logs from a roadway that has been attempted in Brown county in many years. Five hundred cords were taken from three and one-half miles of the Shawano road. The cost of the work was only $260, and the division highway engineer, W. M. Conway, believes that the town deserves great credit for improving one of the main highways leading into Green Bay from the northwest.

More than 16,000 bushels of potatoes were shipped out of Robbins station, Oneida county, this fall. The crop averaged about 200 bushels to the acre.

Favorable reports on the proposed building of a permanent road between Bayfield and Douglas counties were made at the meetings of the county boards of these counties as the result of the recent inspection of the road which has been made by a joint committee of six. The estimated cost of the road is $100,000.

More than 50,000 bushels of potatoes will be transported from Washington Island, Door county, this season by sail craft. The tubers are transported to the Chicago and Milwaukee markets.

Large quantities of barley have been moved on Lake Winnebago this fall. Recently the steamer Leander Choate brought from Calumet Harbor to Fond du Lac 3,000 sacks in one cargo, or about 7,000 bushels in all. It took seventy large wagon loads to haul the grain to the malting company's plant. The farmers in the vicinity of Calumet Harbor bring their grain to the dock where it is loaded on board the boat.

The four months, short course for young men and women at the Dunn County School of Agriculture was opened up on November 17th. The course of study is wholly practical. Work is offered in farm crops, animal husbandry, agricultural engineering, manual training, domestic science, English and arithmetic. Work begins at 9:20 a. m. and continues to 3:15 p. m., making it possible for pupils to return to their homes at night if they desire. No tuition is charged, but the materials used in the laboratories are paid for by the students.

National and state banks at Waupun have been notified that their petition for a second annual bankers' corn and grain contest has been granted. The contest last year was a decided success and brought out many excellent exhibits. Pure-bred seeds were distributed last year and the product of this seed will be placed in a class by itself at this contest. The college of agriculture will again furnish some members of its faculty to judge the exhibits and deliver lectures. Cash prizes will be offered with a liberal sweepstake prize.

More than 1,400 pounds of butter were confiscated in Milwaukee on the 4th inst. by deputies of the city health department. The butter is the product of a large producer and shipper who has done a great volume of business in Milwaukee. Partial analysis showed that the butter was adulterated with corn starch at the rate of about ten pounds to every hundred pounds of butter.

C. H. Nehrlich, of Lyndon, has sold fourteen head of pure-bred Holstein cattle to a millionaire miner of St. Louis for $5,000.

THE CARE OF INNER TUBES.

To the Editor of The Homestead:

A pneumatic automobile tire is an envelope for the air pressure it retains. The casing provides the tensile strength necessary to sustain the internal pressure and to resist road wear; the function of the inner tube is to provide an air-tight lining for the casing. The casing is the more expensive but this does not prevent the by-no-means inconsiderable saving that a few simple precautions with the tube will return.

It ought to be borne in mind that the tube is the most delicate part of the tire and that to yield the highest efficiency it ought to be treated to correspond. The tube in itself has comparatively no tensile strength; it simply flattens itself out against the inside of the casing. If ever the casing becomes too weak at any point, the tube blows out; in itself it cannot restrain the pressure of the inside air cushion.

To insure good tire service, the motorist takes precautions against tire trouble. The first problem is to take care of the casing that it will successfully protect the inner tube. The motorist also will be interested in knowing the things to do to avoid unnecessary trouble with his tubes.

One of the fundamentals is proper selection. It is a matter of no little consequence to select from the many styles now on the market, each having apparent advantages to recommend it, the type which best satisfies the essential requirements for reliable service. As the function of a tube is that of an air-tight lining, for the casing the most satisfactory tube is one that not only fulfils this requirement best but which retains its air-tight property longest. To remain air-tight the tube must be elastic, as in service it is subject to continual flexing.

In general, there are two classes of tubes on the market—pure gum and compounded. The compound tube is usually thicker than the pure gum type and increased thickness is desirable because it decreases the susceptibility to pinching and puncturing. Pure gum tubes are usually not as thick because of the extra and essentially unnecessary expense this would involve. But the extra thickness of the compounded tube introduces more disadvantages than this one advantage can compensate for.

Originally, a compounded tube is air-tight and highly elastic. But it can't retain these qualities long. The inorganic compounds it contains not only are good conductors of heat, so increasing the tendency to heat, but are themselves capable of deteriorating the rubber, especially when heated. In service there is a natural tendency to heat and the pure gum tube resists this tendency, being harder to heat, and in addition, is not so easily injured by heat. This is very important in its effect on repairs. It is difficult to repair a compounded tube satisfactorily. Its adhesion to pure gum vulcanized repairs is not perfect and the heat necessary to cure the repair seriously injures the part of the tube affected. For a short time a compounded tube may give good service, but the pure gum tube is the only type capable of all-around consistent service.

First of all, the immediate conditions should be considered. The inside of the casing should be clean. If any dirt is present, it chafes the tube, weakening it sometimes to the yielding point. Suppose, as often happens, a nail or a stone finds its way inside the casing. When the tube is inflated, it is flattened against the inside of the casing by the pressure and it is forced with equal pressure against these foreign substances. Frequently they cut the tube before it is fully inflated. And so, the first requisite is that the inside of the casing be kept clean.

Besides the inside of the casing, the tube also comes into contact with the rim between the beads of the casing. The rim accordingly also should be clean and smooth. The chief damage from rims, however, arises from their tendency to rust. Rust, aside from making the rim rough, eats into the tube. Perhaps the most effective way to deal with this is to paint the rim with graphite paint. Whenever possible, this should be done. Flaps to be placed between the rim and tube offer protection from the rim and rust, and are of advantage provided the user is careful not to pinch his tube between the edges of the flap and the bead of the casing, a condition discussed a little further on.

For the repair of punctures and blow-outs, it is necessary frequently to remove the tube from the casing. For this reason the tube should never be permitted to stick to the casing, something it ordinarily has a tendency to do. This is obviated by the generous use of French talc.

Most motorists realize the damaging effect of running a tire flat after a puncture. The casing is quickly ruined beyond repair, but the tube is even more easily ruined. Driving a short distance with the tire flat will grind up the tube into pasty shreds.

We come now to a discussion of the cause of more tube trouble perhaps than all other causes combined—pinching. Again and again, the motorist has been surprised when driving his car carefully on the best of roads, to have an explosion announce a blow-out on one of his tires, which, after his examination, proves to be an internal one. The casing has not been cut and bruised; it is in perfect condition. Still the tube, without apparent cause, has split for the space of a foot and is worthless.

The cause is to be found in the tire's history a short time previously. The last time the tube was removed from the casing and then applied again, a small part of it was caught between the rim and the bead. On being inflated, too much strain was centered at this pinch. The weakening was gradual but the eventual blow-out was certain. Sometimes the blow-out comes more quickly, at times while the tire is being inflated. The tube may also be pinched between the spreader at the base of the valve stem and the stay bolts. Its effect is the same as a pinch at the edge of the bead.

Because of the manner in which regular clincher casings are applied to their solid rims, pinching at the edge of the bead is more frequent in the use of this type than any other. The elastic bead must be stretched over the side of the rim with a tire iron and care is necessary to prevent a pinch. The tire iron itself, if not carefully used, is likely to damage the tube. Later, the weakened spot announces itself by a blow-out.

A final precaution will pretty well insure against disappointing tube service, and that is this: protect your spare tubes. Usually the spare tubes are folded and carried in the tool box. Here they come in contact with greases, oils and tools which present sharp edges. The tube will frequently be shifted around during a search for some needed article. In time this shuffling around chafes and deeply wears the folded edges. Often a tube is actually worn out in a tool box before it is ever used. Tubes should always be carried in bags or in the paste board boxes with which their maker furnishes them. F. A. Henderson.

SHREDDING CORN FODDER.

To the Editor of The Homestead:

Nearly every farmer in this locality has his corn shredded and even some who have silos. Two years ago I was quite undecided whether to shred, as usual, or not, so I sat down and figured what it would cost to hire it husked, cribbed and fodder stacked by hand. Also figured up total cost of shredding if all the work was hired and the shredding only figured up about $3 more than hand husking. Shredders around here will use nothing but coal for their engines and the coal that was used to run the engine made the extra expense. If the engineer burned wood (all the farmers had wood to burn) hand husking and shredding would be about equal in cost, that is, figuring the same as if the work was hired.

I based my figures on a field of eleven acres representing nearly one and one-half days' shredding for a six-roll shredder. Of course, if a man has only a few acres cut up and has time to husk it by hand and intends to feed it outside it would not pay to shred. But where a farmer cuts up all or nearly all of his corn and feeds it in the barn to all the stock, or is short of straw for bedding, then it pays and pays well. First, he makes hay out of his corn fodder; second, what the stock don't eat makes the best of bedding ready to hand; third, he can get it into a much smaller space and it is much easier to handle than if in bundles. While some corn gets shelled off, not much is wasted where hogs and chickens are kept.

One year I had not barn room for all I shredded so was obliged to stack part of it, and it kept as well or better than hay would. About the only objection to stacking is in case the wind blows hard while shredding, much of the best fodder is blown away.

I feed it outside of feed rack, or old wagon box or leaky tank and prefer it as an outside feed to anything I can get, even to corn fodder in bundles. Several others and myself, in this neighborhood, only figure to have enough hay to feed the latter part of March until grass comes. Until then we feed shredded fodder altogether to all the stock, as roughage, except those who have silage or lots of straw.

I prefer my corn cut by hand eight hills square and cut with a "horse." Others prefer the corn binder, but in either case there is but slight difference in the labor of getting it to the shredder.

The entire cost of shredding where the farmer does all the changing necessary to secure help is but $15 or $16 a day for a six-roll shredder and the price of about half a ton of good grade soft coal. The eight, ten or twelve-roll shredders generally cost $25 a day and use about one ton of coal a day. Where a gasoline engine is used the cost of fuel is considerably cheaper and the fuel is easier to get. For the six-roll shredder it requires three to five teams to haul depending on distance to farthest end of cornfield, one man to crib the corn, one or two in barn, two to pitch bundles or bounce shocks on wagons, and usually one to help unload if cut by hand or cut bands if in bundles. The larger machines generally require two to fifteen men besides the regular shredder operators, but they shred nearly twice as much as a six-roll. While the larger machines generally shred an acre a little cheaper than the smaller ones, it is generally the best policy to take the first one that comes along provided your corn is dry enough to crib.

As to the results of feeding shredded fodder, I consider it second only to clover hay for cows and ahead of anything else for horses. For sheep it "takes the cake," but don't overfeed at the start no matter what kind of stock you feed it to. The first year I shredded I had to send for a veterinarian within three days after I shredded, for one of my horses. He soon got better, but I know a neighbor who lost a good young horse from the same cause even though he called the veterinarian. Feed hay or straw at least once a day until used to it and only fill mangers half full of shredded fodder. Geo. M. Heiberger.

Clayton County, Ia.

To the Editor of The Homestead:

For those wishing information regarding the shredding of corn fodder I will give the following facts, according to my experience. The cost per acre for shredding is $2, but in the case of listed or drilled corn it will cost $2.50 an acre. The help with men and teams will amount to that much more, making in all a little more than $4 an acre.

There will be a great deal of corn shelled, something like four or five barrels to a hundred shocks of corn, but this comes in very handy for chicken feed and saves the good housewife the labor of shelling the corn as some have to do.

After the corn is run through the shredder the grain is ready for the crib and the fodder is run into the mow or barn, out of the weather and handy for feed. In my opinion it makes as good feed for work horses as hay. In some cases it is used during the following summer and the stock come through in good condition.

Of course, some of the fodder is not cleaned up by the stock, but it may be used for bedding and it makes the best manure.

When one has the shredder to do the work the bother of corn shocks is a thing of the past.

Mahaska Co., Ia. Mrs. J. E. Besco.

Hard roads earned $10,800 for Folker Ibens, of Milledgeville, Illinois, in eight months. Last March he bought a farm of 216 acres, four and a half miles from town. He paid $150 an acre for it. Last spring Wysock township, in which the farm is located began the construction of fourteen miles of hard roads. The tax on the farm of Mr. Ibens was $70. The road did not come closer than a half mile of his home, but as a result of being able to get to town at any season of the year, a demand was created for the place. Recently he refused an offer of $200 an acre for the farm.

NEWS OF THE SALE RING

Stone's Aberdeen Angus Sale.

The sale of Aberdeen Angus cattle held at Kansas City on November 14th by Marion C. Stone, Milan, Mo., proved one of the best places to get bargains in good Aberdeen Angus cattle that has been found recently. Mr. Stone had listed some of his very best young things and they were in fine condition, but with only a handful of buyers they went at bargain prices. The general average on the forty-five head was $112. The top on bulls and the top of the sale, $220 was paid by W. S. Swart, for the Trojan Erica bull, King Erica of Five Gates, an October yearling. W. I. Williams, Belton, Mo., was the heaviest buyer of females and he certainly secured bargains. Two of the finest things in the sale were the twin Trojan Erica heifers secured by W. A. Holt, Savannah, Mo., at $130 each. Colonels Reppert, Graham and Igo were the auctioneers. Following is a list of sales of $100 and over.

FEMALES.

Eppy 5th of Five Gates, calved July 5, 1909; R. J. Ellis, Lawrence, Kan. $185.00
Eppy 7th of Five Gates, calved May 13, 1911; Venable Bros., Leeton, Mo. 125.00
Eppy 8th of Five Gates, calved May 27, 1912; W. A. Holt, Savannah, Mo. 130.00
Eppy 9th of Five Gates, calved May 27, 1912; W. A. Holt..... 130.00
Eppy 10th of Five Gates, calved Oct. 25, 1912; Geo Stevenson, Jr., Kansas City, Mo. 115.00
Pride 9th of Five Gates, calved Mar. 1, 1908, and c. c.; S. M. Stewart, Mt. Sterling, Iowa.... 110.00
Pride 14th of Five Gates, calved Aug. 20, 1912; E. Hedstrom, Lost Springs, Kan. 132.50
Pride 15th of Five Gates, calved Jan. 9, 1912; W. I. Williams, Belton, Mo. 130.00
Pride 17th of Five Gates, calved Jan. 11, 1912; H. F. Cabble, Strassburg, Mo. 137.50
Pride 19th of Five Gates, calved Jan. 6, 1913; Paul Culver, Edge Mo. 112.50
Lady Ida of Five Gates, calved Dec. 17, 1908, and b. c.; W. I. Williams 125.00
Lady Ida of Five Gates, calved Dec. 20, 1910, and b. c.; J. E. Dean, Bosworth, Mo. 115.00
Lady Ida 8th of Five Gates, calved Jan. 6, 1912; W. I. Williams .. 110.00
Abbess 2d of Five Gates, calved Nov. 23, 1909; W. I. Williams.. 105.00
Duchess Nelly 8th, calved Nov. 5, 1908, and b. c.; E. Hedstrom... 140.00
Duchess Nelly 12th, calved Oct. 22, 1911; Venable Bros. 120.00
Duchess Nelly 10th, calved Dec. 12, 1909; W. I. Williams 100.00
Zara 4th of Five Gates, calved Oct. 28, 1909; R. S. Williams, Liberty, Mo. 125.00
Pride 10th of Five Gates, calved Sept. 16, 1908; S. M. Stewart .. 125.00
Duchess Hortense 8th, calved 1908, and b. c.; A. B. Venable, Leeton, Mo. 125.00

BULLS.

King Erica of Five Gates, calved Oct. 30, 1912; W. S. Swart, Blairstown, Mo. 220.00
Kilburn 2d of Five Gates, calved Jan. 13, 1913; S. M. Stewart ... 225.00
Nabob of Five Gates, calved Oct. 25, 1912; Geo. Stevenson, Jr... 175.00
Nabob 2d of Five Gates, calved Nov. 2, 1912; W. A. Audsley, DeWitt, Mo. 130.00
Oran of Five Gates, calved Nov. 14, 1912; H. W. Burtrum, Windsor, Mo. 100.00
Black Dan of Five Gates, calved Nov. 13, 1913; H. F. Cabble ... 120.00
Abbott of Five Gates, calved Sept. 21, 1912; G. H. Grimes, Smithshire, Ill. 180.00

SUMMARY.

36 females ..$3,725; average....$103.47
9 bulls ..... 1,215; average.... 146.11
45 head ..... 5,040; average.... 112.00

Mrs. Gorder's Poland China Sale.

The Poland China sale of Mrs. August Gorder, at Plattsmouth, Neb., on November 12th brought out a nice crowd of breeders and farmers and she sold forty-eight head at an average of $30.40. The top was No. 2 of catalog, a fall boar sired by Teddy and out of a Centennial dam and he went to Jacob Dietsch, Boone, Neb., at $135. He was a splendid boar in every way, and was really one of the best fall boars seen in any sale this fall. His litter brother went to E. C. Huff, Wiota, Iowa, at $70, and he was a splendid bargain at that figure. Joseph Nansel, of Council Bluffs, was a liberal bidder and he secured five head and Frank Owens, also got some very excellent bargains. Col. Harve Duncan cried the sale. Below we list those that sold for $25 and above:

1. Ben Duker, Plattsmouth, Neb.$ 29.50
2. Jacob Dietsch, Boone, Neb. .. 135.00
3. E. C. Huff, Wiota, Iowa..... 70.00
4. Pitts & Adams, Plattsmouth, Neb. 60.00
5. Peter Holmes, Plattsmouth, Neb. 36.00
6. P. A. Held, Mynard, Neb..... 36.00
7. Joseph Nansel, Council Bluffs, Iowa 27.50
8. Ben Duker, ... 35.00
9. Joseph Nansel 37.50
10. Frank Owens, Council Bluffs, Iowa 35.00
11. C. L. Mayabb, Plattsmouth, Neb. 37.50
15. J. H. Healy, Manilla, Iowa.. 32.50
13. W. R. Young, Murray, Neb... 37.00
14. Joseph Nansel 31.00
16. Frank Owens 40.00
17. Paul Solko, Wyoming, Neb... 35.00
29. J. B. Seyboldt, Murray, Neb... 26.00
32. P. A. Held 35.00
33. John Hobschordt, Murray, Neb. 30.00
34. Arthur Sullivan, Plattsmouth, Neb. 26.00
36. Michael Schiltz, Earling, Ia. 25.00
49. P. A. Held 27.50
38. R. B. Stone, Nehawka, Neb... 30.00
40. Frank Owens 57.50
41. Harley Wites, Plattsmouth, Neb. 62.50
48. Joseph Nansel 25.00
0. J. N. Elliott, Plattsmouth, Neb. 27.00

Harry Dodds' Poland China Sale.

A good crowd attended the H. T. Dodds Poland China sale at Florence, Neb., on November 13th and he sold forty-two head at an average of $36.40. The top of the sale was No. 22 and she went to Carl Marks at $70. No high prices were paid, but it was an even range, and while the offering was worth more money it was satisfactory to Mr. Dodds. Iowa buyers were out in full force and over half the offering went across the river. Col. Harve Duncan cried the sale in his usual successful manner. Below we list those selling for $25 and above:

1. J. B. Striellett, Kennard, Neb. $40.00
2. A. B. Duncan, Shannon City, Ia. 37.50
3. Joseph Nansel, Council Bluffs, Iowa 33.00
4. J. H. Healey, Manilla, Iowa... 41.00
5. J. B. Striellett 40.00
6. Henry Scott, Weston, Iowa... 34.00
7. C. A. Hill, Trumbull, Neb..... 32.50
0. A. F. Tiarks, McClelland, Ia... 62.50
9. F. W. Beck, Council Bluffs, Ia. 52.50
10. Chas. Behlers, Wisner, Neb... 62.50
13. Frank Owens, Council Bluffs, Iowa 82.50
14. I. N. Minnick, Council Bluffs, Iowa 30.00
16. Jacob Dietsch, Boone, Neb..... 42.50
20. Frank Poeschl, West Point, Neb. 42.50
21. I. N. Minnick 27.00
19. J. H. Healy 62.50
17. Maurice Lonergan, Florence, Neb. 26.00
18. Maurice Lonergan 26.00
22. Carl Marks, Neola, Iowa 70.00
23. Dr. H. Pritchard, Florence, Neb. 45.00
24. E. W. Youell, Tekamah, Neb. 40.00
27. Henry Lewin, Hartford, S. D. 55.00
26. Paul Wagner, Pierce, Neb.... 45.00
25. A. F. Tiarks 41.00
28. F. L. Rood, Clearfield, Iowa.. 35.00
30. F. J. John, Spaulding, Neb.... 26.00
31. F. L. Rood 25.00
32. Frank McCauley, Springfield, Neb. 45.00
38. E. Brookman, McClelland, Ia. 25.00
36. I. N. Minnick 25.00
37. I. N. Minnick 25.00
42. I. N. Minnick 32.00
34. I. N. Minnick 32.00
33. I. N. Minnick 30.00
43. E. B. Evans, Council Bluffs, Ia. 25.00

Hollingshead's Poland China Sale.

On November 11th, at Chariton, Iowa, R. C. Hollingshead made a sale of fifty-two head of Poland China boars and sows and made an average of $37.75 on fifty-two head. It was one of the very excellent offerings sold this fall and those that were present were surprised with the high-class lot of boars and sows that he had cataloged for this sale. Mr. Hollingshead is a new breeder, but he has demonstrated his ability as a hog man and while this was the first sale he ever made, it goes far toward establishing his herd and making it one of the best today in the state. The top of the sale was a spring boar No. 16 of catalog, and he was bought by D. H. Jacobson, Gilbert Station, Iowa, at $109, and he certainly was a great bargain at that price. M. G. Arnold, Strawberry Point, Iowa, got a great pig in No. 20, and S. U. Peace, of Missouri, got another very choice boar in No. 10. It was an even sale from start to finish and was well attended. Col. Harve Duncan cried the sale and did excellent work. Below we list the entire offering:

10. S. U. Peace, Princeton, Mo....$ 62.50
16. D. H. Jacobson, Gilbert Station, Iowa 109.00
20. M. G. Arnold, Strawberry Point, Iowa 55.00
11. Henry Renschel, Coatsburg, Ill. 48.00
3. J. T. Hollingshead, Russell, Ia. 41.00
4. E. A. Van Benthuysen, Promise City, Iowa 47.50
8. J. S. Doer, Aledo, Ill..... 28.00
7. W. H. Benthuysen, Bussey, Ia. 35.00
5. A. E. Scott, Russell, Iowa.... 35.00
19. J. H. Cope, Carlisle, Iowa.... 37.00
6. A. L. Davidson, Corydon, Ia... 41.00
3. D. R. Baker, Oakley, Iowa.. 35.00
44. C. W. Prim, Lucas, Iowa.... 52.50
36. L. W. Lugar, Derby, Iowa .. 42.50
31. W. S. Ivy, Leroy, Iowa..... 37.50
52. A. C. Dixon, Russell, Iowa... 28.00
40. G. S. Culver, Chariton, Iowa. 25.00
32. Casteele Farm Co., Princeton, Mo. 28.00
30. E. S. Anderson, Chariton, Ia. 28.00
60. W. E. Giltner, Albia, Iowa.... 53.00
38. W. E. Giltner 46.00
59. J. M. Nesbitt, Aledo, Ill..... 52.50

Montana Farming Pays

More Wheat Per Acre

comes from the fertile valleys of this vast treasure land than from any other state in the Union.

The yield this year will be the largest in the history of the state.

There are millions of acres of ideal wheat lands, irrigated and non-irrigated, awaiting enterprising farmers. This land can be bought for a third of the price asked for Middle West and Eastern land and yields double.

Montana not only leads in quantity but also in quality of grain produced. At the recent New York Land Show, Montana farmers won the prize cups for best Wheat, Oats, Barley and Alfalfa grown in the United States.

The opportunities Montana offers ambitious men and women with small capital are unlimited. ***Prove these statements by a visit.*** Special low fare round-trip homeseekers' excursion tickets are on sale on certain dates every month via America's newest transcontinental line—the

C. B. Powers' Poland China Sale.

The sale of Poland Chinas held by C. B. Powers, Aurora, Neb., on November 12th was well attended and a very successful sale was made. The offering was a good one, although a lot of young stuff was sold. Several May litters were included and one of two June litters were offered. There were forty-four head sold and they brought an average price of $35.34 per head. The March stuff averaged right at $50 per head. The top of the sale was $75 and E. C. Forest, Miles, Iowa, paid this price for a gilt, Lot 8 of the catalog. S. A. Nelson & Sons, Malcolm, Neb., were the best buyers of the sale and took eight head. Thos. F. Miller, York, Neb., and John O'Connell, Malcolm, Neb., were the buyers or the competition on good gilts. Mr. Powers is to be complimented on the offering he put up and the good average is sufficient to show that his hogs were appreciated. Those selling for $30 or more are listed:

1. Amos Yarno, Central City, Neb.$40.00
2. J. W. Gregory, Ord, Neb..... 60.00

J. R. Blackburn's Duroc Sale.

One of the nicest little offerings of Duroc Jersey boars, and about as little appreciated as any of the season, was the offering put up by J. R. Blackburn, Ord, Neb., on November 5th. The crowd was somewhere else sale day, certainly not at the sale. It looked as though a half dozen boars would be enough to satisfy all comers but by the judicious efforts of Col. Z. S. Branson, who conducted the sale, the greater part of the offering was sold and at an average of just $25 per head. Those selling above that amount are listed, and also wish to mention that Mr. Blackburn is offering the remainder of his boars at private treaty. The advertisement will be found on another page.

Isaacs' Duroc Jersey Sale.

In a recent letter from T. H. & J. D. Isaac, Red Oak, Iowa, they say: "We had a good sale and when you consider that we sold sixty-five head of boars at an average of $41.80 and a little better than a $30 average on the twenty gilts, it must be regarded as a good one. The top was $71. Thirteen head averaged above $50, and twenty-four head averaged better than $45, and we got a check for every boar sold. We expect to make a brood sow sale, and we will then have some great sows to offer the boys."

OPPORTUNITIES NUMEROUS FOR SHORT COURSE MEN.

"You ask me why I came down from Burnett county to take the two years' short course in agriculture here at the University of Wisconsin. Well, I'll tell you. Two years ago I entered the Young People's Grain Growing contest and won a scholarship for the one week's course for young people, with all expenses paid. That's the reason I am here taking the short course now. The more you get, the more you want of this kind of education."

The speaker was a young man of about eighteen years of age, rugged and independent in appearance, and the "man who wanted to know" had picked him out of a crowd about the registration desk, touched him on the shoulder and drawn him aside for a minute's conversation. For let it be remembered, the "man who wanted to know" hailed from an eastern state, where farming is much less popular than it once was, and where the hillsides are dotted with abandoned farmhouses. In this pilgrimage of youthful farmers to the state's agricultural college after the harvest and plowing were done, "the man who wanted to know" thought he saw a reason why the supremacy in dairying, stock raising and pure-bred grain growing has been wrested from the valleys of the Catskills and Adirondacks to the rolling prairies of the north-central West.

"When was this short course of yours established, and how does it work out? I am interested. Let's hear all about it," said the "man who wanted to know," leading his new friend to a seat in the corridor. And soon the stranger became the "man who knew" when he learned:

That the short course of the University of Wisconsin was established by the regents in 1886, with an attendance of nineteen pupils, since which it has grown to be the most popular and serviceable course for the average farm boy of any given at the institution—with an enrollment last year of 431.

That no entrance examinations are required, and that instruction is given by means of lectures, recitations, laboratory practice demonstrations and conferences.

That it takes the farm boy after the fall's work is finished, gives him an opportunity to enter the Agricultural College at the University for the winter and lets him go back to the farm in the spring to begin the season's work.

That this arrangement enables an energetic young man to earn enough during the summer to keep him at the University during the three and one-half months of the course.

That the idea of the short course is to give the largest possible amount of information and training in practical, everyday problems connected with the tilling and the handling of livestock and to give it plainly and in the shortest possible time without undue crowding.

That it thus enables young men from the various parts of the state to associate with each other and meet prominent men from this and other states, who are authorities in agriculture.

That it helps to awaken the young farmer to the many interesting facts and opportunities that lie all about him on the old farm home.

That the course is planned to give the student an inspiration; to remove the drudgery and dread from farm work; and to teach him to look for the best in others and to give the best he has.

That the course fits young men to capably fill positions as farm managers, dairy assistants, herdsmen and feeders, gardeners and fruit raisers, ranch foremen, etc., at good wages—but, better still, it enables them to return to their home farms and help "father and brother" to grow two spears of grain where only one grew before.

Moreover the boy who attends the short course gets an entirely different outlook on life. An earnest effort is made to instill in him the opportunity for country leadership which the modern successful farmer has today.

The college can well point with pride to the record of achievements which the graduates of the short course have made. As members of the legislature, members of the appointive commissions such as the State Board of Public Affairs, State Board of Agriculture and the leaders in many of the agricultural associations of the state the graduates of the earlier years of the short course are now the prominent farmers of the state.

Then and there the "man who wanted to know" decided to learn still more about the course which has made the Wisconsin college of agriculture so popular with large numbers of the farm boys of this state. He attended several of the classes, heard the lectures, saw the demonstrations and sat in a number of the conferences and then intently inquired when the next short course would be given. It may be that when registration begins on Saturday, November 29th, he or some of his farm boys will be in Madison.—[Wisconsin Farmer.

PRICES MUST GO HIGHER.

To the Editor of The Homestead:

The packers are still blaming the farmers for the scarcity of beef. I quit raising cattle because I was losing money. My neighbors all quit for the same reason. Our county has 4,000 less cows and "she stuff" than five years ago, according to county figures. Consumers need not look for cheaper meat until the price goes high enough to induce the men who farm to raise more calves. We have not only had to quit the cattle business on account of lack of profit, but we are losing our sons and young men from the farm because the farm, like the cows, shows little profit for the labor and capital invested. As a farmer and stockman I am pleased to note that our servants in the employ of our state and federal agricultural departments have ceased to send out the old order of highly-colored favorable press articles and are now putting out brass tack facts and calling a spade a spade. The assistant secretary of the department of agriculture recently said: "If the farmers of the country are assured of a fair profit they will raise beef cattle to supply the demand in this country and export large quantities. The farmer is not in the habit of engaging in the raising of any crop on a philanthropy. The reason there has been a falling off in the supply is simply that the farmers cannot afford to raise them at a loss."

Jackson County, Mo. F. K. C.

WHEAT MAY BE SUBSTITUTED.

To the Editor of The Homestead:

Feed promised to be unusually high this winter. The average daily production of the cows is low, as a result of short pasture during the summer. The best a dairyman can hope to do is to pay the feed bill and bring his cows through the winter in good condition.

Many men have corn silage, timothy hay and wheat, but are short on corn. Being cheaper than corn, pound for pound, wheat is the more economical feed. It has about the same feeding value as corn. With these feeds cottonseed meal is the only feed that need be bought. The wheat and cottonseed meal should be mixed in the same proportions as corn and cottonseed meal, three parts chopped wheat to one part cottonseed meal. A cow giving two gallons of milk a day should receive daily about thirty-five pounds of silage, all the hay she will eat and about five and one-half pounds of the grain mixture. The grain in this case is fed at the rate of one pound for each three pounds of milk the cow produces. If cowpea or clover hay is available and there is no silage, the hay will take the place of the silage. A cow will eat between fifteen and twenty pounds of good hay each day.

If corn fodder and timothy or cane hay is the only roughage available the cows should receive all they will eat and the grain in this case should be fed one pound for about every two pounds of milk the cow produces daily.

These two rations meet the conditions on the majority of the dairy farms in southern Missouri. There are some communities, however, where more and better feed is available. We will be glad to help figure out balanced rations for anyone asking for information. Inquirers should give the kinds and prices of feeds available when writing for this information. P. M. Brandt.

Missouri Experiment Station.

Many beekeepers beat tin pans at swarming time because they think it makes the bees settle down; but a contributor to "Bee Culture" says that this practice is merely a relic of a forgotten English law which required the beekeeper to give notice in this way that his bees are swarming and that he was entitled to follow them. If he lost sight of them after giving this warning, the bees became the property of the person on whose land they alighted.—Outlook.

The arrival of 1,906 car loads of live poultry in New York last week establishes a record and indicates an immense stock of poultry throughout the United States, it is declared. The shipments came from almost every state in the Union, particularly from the middle West. An estimate of the receipts of live poultry for 1913 to date is 6,000,000,000 making New York city's poultry bill thus far this year more than $16,000,000.

Exports of American eggs during the fiscal year 1913 reached 21,000,000 dozen, as compared with 143,000 twenty years ago. More than half this total went to Canada.

WITH THE EDITOR.

Several years ago there was a wider (and shall I say wiser?) discrimination between clothes for the street and clothes for evening wear than there is today. It was a noted English woman who said that either there are more girls in this country of the wrong kind or else the two classes dress more nearly alike than the women of her own country.

In defense of the present-day abbreviated costumes a young girl held to view a picture of a dame taken three generations ago and asked if the attire of the present day is not preferable. After comparing the latter with the voluminous hoop-skirt that would today find difficulty in passing through an ordinary door, in all honesty I was compelled to say: "Yes, if in a modified form."

It is very evident that the present injudicious apparel worn by young girls is, in a measure, responsible for the great wave of crime that is amounting almost to a tragedy. Conditions have become so bad in some cities that men in plain clothes have been stationed at the worst streets to protect women from insult.

In speaking of this matter, the secretary of the Young People's Civic League, says:

Girls and women nowadays dress very foolishly, and are, themselves, largely responsible for the increased amount of discourtesy they receive. This evil has reached almost the tragic stage, and the exaggerated fashions are the real cause. Some of the girls, who come to me with their stories, tell pitiable tales. I tell all of them to dress plainly, and so conduct themselves that there will be no excuse for men approaching them. If shop girls and office girls were more careful how they dress there would be fewer causes for complaint. If husbands, fathers and employes would not countenance the skirts and dresses which girls and women wear it would not be so hard to correct the evil. Some strenuous effort must be put forth to correct it. There is no doubt that it exists in our community, in two-fold proportions to that of previous years.

No doubt some of our members think of the above advice as did a young girl whose attention was called to it. These are the exact words in which she expressed her views: "I'll just wager that effusion was written by an old maid, with a complexion like a lemon, who pulls her hair straight back and dresses like a—well, like a 'chump.'" Whatever a "chump" may be I will not take the trouble to learn. Far more effective will it be to refer to one who is most certainly not a "chump." This is what Worth, the great designer, says, relative to the matter:

The craze for the new styles is a disease. To old and young, rich and poor, my advice is the same: Choose good and beautiful materials, costly and many, if you are rich enough to afford several frocks, and have suitable opportunities for wearing them; few, but of their kind excellent, should your dress money be limited. Then have them made up simply, but always bearing in mind the requirements of the occasion they are to adorn, and your own individual needs. Be not fashion's slave. To wear what is said to be the "mode" simply because it is said to be, without any inquiry as to its suitability, or becoming qualities, in regard to the individual—that were foolishness indeed. In this lies the secret of thoroughly bad dressing. No woman of refinement dresses to attract indiscriminate attention. Each frock, instead of showing every fugitive craze of the hour, should be beautiful and becoming, and of good material. Then there will be no reason why, possibly with a little alteration, but probably with none at all, the gown, aged two, three or even four years, may not be worn and look admirable. Never use fashions that date a dress. When everybody is wearing balloon sleeves, restrain your own. When skirts are so attentuated that walking is difficult, have an extra breadth in your own. Beauty is suitability; common sense should ever rule the woman who aspires to successful dressing. In all exaggeration there is danger.

This will apply not only to people who wear clothing bearing Mr. Worth's name, but to every girl and woman of every station. There is a young girl who, when younger, chafed restlessly about this dress question. She was permitted to use her own individuality so far as possible, but when it came to a case of positive right or wrong the young lady was required to do the right thing. Not long since she was singing the praises of a young woman of her acquaintance; so enthusiastic did she become that the mother became interested and asked her to be more definite. "Well," returned the daughter, "I hardly know how to begin. First of all, she rates people for what they themselves are worth. She is 'real people' herself, and knows the veneered kind from the genuine article. She is sympathetic; she is unselfish and helps, but never crowds others. She has tact; not a gift, either—she acquired it—and studies how not to wound the feelings of others. She realizes that life is no joke, and yet never permits a gleam of humor to go to waste. And you should see her dressed for the streets! She is a good dresser, right up to date, and yet wears nothing conspicuous. People turn to look at her the second time, but they never laugh and call the 'other fellow's' attention to her." "Do you suppose she would wear soiled white slippers and a low-necked waist to a circus?" demurely asked the mother. "Now, mamma, that was ages ago, and you're not playing fair."

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

The common problem, yours, mine, everyone's,
Is not to fancy what were fair in life,
Provided it coud be—but find first
What may be, then find how to make it fair
Up to our means.
—Browning.

Upon the bleak November hills
A solitary bluebird trills
His latest song—and far along
The russet upland loudly rings
The lay the sturdy woodman sings.

I believe in gittin' as much good outen life as you kin, not that I ever set out to look for happiness; seems like the folks that does never finds it. I jes' do the best I kin where the good Lord put me at, an' it looks like I git a happy feelin' in me all the time.
—Mrs. Wiggs.

It is no use to grumble and complain;
It's just as cheap and easy to rejoice,
When God sorts out the weather and sends rain—
Why rain's my choice.
—James Whitcomb Riley.

HOMESPUN WRINKLES.

Brooms dipped in boiling suds once a week will wear much longer. It makes them tough and pliable.

Mold can be prevented in paste or mucilage by adding a small quantity of carbolic acid. Added to the whitewash, it purifies cellars and dairies.

Old putty can be removed from windows by passing a hot poker slowly over it.

Vinegar, good and sharp and heated hot, will take the paint off glass.

Water standing in the bedroom over night is unfit for drinking purposes. A pitcher of cold water in your room does much to purify the air.

Tar can be removed from cloth by saturating the spot with turpentine and rubbing well.

A bag of charcoal put in the cistern will do much to purify the water.

WAYS OF PREPARING RABBIT.

In the absence of game in many of our localities, the lowly rabbit is not to be despised. When properly prepared the flesh of the rabbit will compare favorably with that of the much favored hare. Rabbits caught in traps and mercifully killed with as little mangling as possible, are not to be compared with the ones that are badly shot. The following recipes are tested and will be found to be thoroughly reliable.

Fried Rabbit.—This is suitable for young rabbit alone. After being carefully dressed, cut the rabbit into small pieces and soak in salt water over night. Roll in flour and fry in hot fat exactly as you fry chicken. Could hardly be distinguished from squirrel.

Stewed With Steamed Dumplings.—Cut the rabbits into pieces and cover with cold water; season with salt, pepper and small cubes of bacon. When the meat is very tender, remove from the liquor; add to the latter one onion, minced fine, pinch of cayenne pepper and a sprig of parsley. Let all simmer fifteen minutes. Remove all bones from the rabbit, and pick the meat into small bits with a fork. Add the liquor, mix well and press into a dish or granite basin. Set in a cool place over night. The liquor forms a stiff

jelly about the meat, and the next day it is ready to serve cold.

Stewed With Steamed Dumplings.—Stew rabbit in water and let simmer until tender. For the dumplings, sift one pint of flour, one-half teaspoon salt, two teaspoons baking powder together four times. Moisten with cream or rich milk, and drop by spoonfuls into the boiling stew. Cover closely, and let cook ten minutes without opening, when they should be done. Pour the gravy over the dumplings, and serve piping hot.

Steamed Fried Rabbit.—This is the best of all ways to prepare an old rabbit. Roll the pieces in flour which contains salt and pepper. Have frying pan very hot and containing one-eighth inch of fat. Place the pieces in this and turn until all sides are a crisp, golden brown. Add one cup water, cover tight and cook slowly until tender. The rich, brown gravy may be poured over the rabbit, or served separately. This is a very toothsome dish. Guineas that have arrived at an uncertain age are very good cooked in this way.

AMONG OURSELVES.

We welcome the views of an Iowa girl on the dress question:

I think "Miss E. P." has stated the facts clearly, and more than that—correctly. The girl that takes is the one that has the latest "do" on her hair; it does not have to always be becoming either. Her skirt is always the latest thing out, no matter if it is so tight she cannot walk decently, she must be in style, or she is not a success socially. Ten to one she is not a success when it comes to building a home that is a home in every sense of the word—a home that will hold the children there until they are ready for homes of their own—a home that will hold the husband until death calls him to that other home where partings never come. The social butterfly is not satisfied herself, and does not make her husband satisfied, and so, after a few years, another divorce is asked for, and granted. There are girls left unasked and neglected by society people, who could, and would, make lovely homes. I could write pages and not say half that could be said, so I will quit now.

That there are worthy girls who are excluded from society I am willing to admit; that it is because of their clothes is a mistake. It is from envy, pure and simple. To be popular, a girl must win through her personality. Cheerfulness, the ability to be happy, the knack of making others happy, are not always divine gifts, but they may be acquired.

The dearest thing on this earth is a wholesome, sweet-tempered girl, whose lovableness is irresistible. To meet her is a tonic. She imparts her courage to others, and inspires the downcast. She belongs not to the classes, neither to the masses, but to the people. This kind of girl can "beat the time" of any painted, mincing fashion plate in the universe. The "society" people know this, and often plan to keep so dangerous a rival in the background. Then, too, all too many people take themselves and the world too seriously. Dressing sensibly does not mean to dress like a dowdy, pinching the lips together in self-righteousness, and being a prude. Any woman who neglects her personal appearance makes the worst mistake possible. She should dress right up to the minute, but avoid exaggeration. Buy the best and most appropriate clothes the money will purchase, don them for the right occasion, and forget all about it.

"A Friend" sends some words of cheer to "Mrs. Lonesome:"

I feel moved to speak a few words of consolation to "Mrs. Lonesome," for I, too, am the wife of a breeder, not only of hogs, but horses as well, and I have too often felt just as she does. My husband would talk horses until I sometimes thought he must be horse crazy. After brooding over my imaginary troubles a long time, I finally wrote my sister and told her all about it. For the benefit of "Mrs. Lonsome" and perhaps others I give her reply. It read as follows: "Dear Sister:—I was astonished at the contents of your letter. You think you have trouble, where, in fact, you have none. Do not brood over it any longer; think of my situation. My husband has an eye for fancy women, while yours has an eye for fancy horses. Now, wouldn't you rather be in your own shoes than mine? Think of the agony I must endure. I cannot go out and work for my four little ones, and I cannot bear to give them up. My husband spends every cent, above the actual living expenses, on fast women." "Mrs. Lonesome," I hope you will derive as much benefit from the lesson my sister gave as I did. Thank God that your husband takes a fancy to fine stock; try to take an interest in it too. Do not put it off too long, either, and I am reasonably sure that modern house will be forthcoming. Cheer up, and all will yet be well.

Dear friends, do try to remember, that if your husbands are neglectful, it is not because of the fact that they raise good stock, but in spite of it. It takes brains to mate and produce a nearly perfect animal; anyone who can do this is just as truly an artist as if he produced an indifferent animal on canvas, and let me tell you, the former will bring in the proceeds to build the new house in a much shorter time. It is this raising our work above the common level that is raising farmers on a plane equally with people in any and all walks of life. In the above letter, there was a picture of a drove of the horses in question; big, handsome Percherons, they were, the kind that you want to put your arms around their necks, and make friends and chums of.

Tacitus Hussey, Iowa, sends us a half-serious, half-comical poem, entitled, "The 'Lucy Gray' of Iowa:"

Mayhap you have seen 'Liza Green,
The widow's joy and pride;
Who helped her mother washing days,
And other days, beside.

Oft have I seen the sturdy lass,
Who had no time to roam,
With heavy basket on her head,
Taking the washing home.

Her days were ever busy ones—
Her retiring hour was ten,
And she rose at ten, precisely,
To the music of "Big Ben."

She never grumbled at her food
With discontented sigh;
But ate her mush and liver fried,
With pious upturned eye!

She was not at all hilarious,
Nor did she sing and shout;
But chortled softly to herself,
When she hung the washing out.

A beauty unadorned was she,
To grace that lonely spot;
The fairest that ever bloomed
Within a lonely cot.

Oh, would there were more 'Liza Greens
In this, our Hawkeye land,
To upraise mother's weary head,
And lend a helping hand!

And, Oh! sad thought! When mother drifts
To that happy unknown port,
Brave 'Liza may in due time have
A husband to support!

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

4th Quar. Lesson 8. Joshua 1:19, Nov. 23, 1913

JOSHUA, THE NEW LEADER.

The generation of the Exodus was dead, but the incalculable gains of its travail in the wilderness were transmitted to the new generation, which stood on the threshold of Canaan. They received as a legacy an ethical code, a ritual, a theocratic government, and the story of the wonders God did in the wilderness. But the time when Israel was to be chiefly receptive was passed. With the spoils of twenty generations, the nation was on the point of projecting itself into a new arena. "Conquest!" was the keynote now. In this emergent situation the call was for a great, determined, tactful, inspirational leader. Joshua was Jehovah's savior for his people. Good blood coursed his veins. He had drunk the bitter cup of servitude. He saw the plagues and the miracles of the Exodus. He became "Moses' minister." He alone went part way up Sinai with Israel's mediator, and was first to greet him as he descended the mount. He learned the art of war. He had already conquered the whole territory east of the Jordan, and installed the two tribes and the half tribe in their possessions. Thus it was no novice who was stepping to the fore in this crisis hour. With quiet dignity and consciousness of his personal resources, Joshua took up the reins of government as the natural successor of Moses. His very first move proves him experienced commander. He seeks a full quota of troops, and makes an appeal for fraternal assistance to the two tribes and the half tribe, asking them to redeem their pledge to help the other tribes conquer the remaining territory. Next he turns his attention to the commissariat. He sends officers through the camp with orders to "prepare victuals." Next he sends the spies to Jericho, which he recognizes as the Gibraltar of Canaan. The divine address to the new leader has been aptly called an enlivening exhortation. The formal announcement of Moses' death is suggestive that a new type of leader is required. Jehovah orders the crossing of the Jordan and the invasion of Canaan. Comforting assurances of success are mingled with the general orders. The boundaries of the territory to be conquered are defined. The

It is No Disgrace Not to Know Good Form or Etiquette

Thousands do not know: in cities as well as in the country. Most of us have not the time to learn: others have not had the chance.

That is why over 23,000 girls and women—men, too: hundreds of them—wrote last year to the "Good Manners and Good Form" editor of *The Ladies' Home Journal* and asked what, and how and when.

And they found out. For this editor knows: none better. She is a woman born and bred in the circles that know good manners and good form for every occasion: that *must* know: and she is not only glad to tell those who do not know, but she has the gift to tell what she knows clearly and to the point. And every year she tells thousands of folks: not in print, but by mail, in direct, specific and personal letters.

This etiquette department is one of the most popular and sought-after divisions of the personal service that *The Ladies' Home Journal* gives its readers. For twenty years it has been going on, until it is safe to say there is not a question of etiquette that it has not answered a hundred times. Nevertheless, it will answer you or any reader of the magazine. Glad to do it, too. And without any charge except a postage-stamp. A booklet, entitled "The Story of 600,000 Invisible Hands," tells something about this service. A postal-card request will bring you a copy.

A year's subscription to *The Ladies' Home Journal*, by mail, costs $1.50, or it may be bought from any Newsdealer or Boy Agent at 15 cents a copy.

BIG HOME COMBINATION
FOUR PAPERS FOR THE PRICE OF ONE

I have closed one of the best subscription arrangements ever made by a publisher of a farm paper.

If you will mail your order during the month of November I will send you The Homestead three years, Home Life, McCall's and Today's magazines each one year for the regular subscription price of The Homestead alone. Read about these four papers.

The Homestead

The leading live stock and farm journal of the West. Its editorial advice and the experience of its large corps of contributors are written with the especial purpose of adaptation to the needs of the readers. It takes up in detail every feature of live stock raising, general farming, dairying, poultry growing, etc.

Regular price, $1.50 for three years.

Today's

Today's Magazine is a monthly and contains from 32 to 44 pages. Large, complete woman's magazine. Full of the choicest kind of literature relating to history, travel, science, invention, art, drama, education, religion, music, fashions, needlework, hair dressing, home dressmaking, health, hygiene, cooking, etc. Also short stories and serial stories.

Regular price, 50 cents per year.

Home Life

Filled with human interest articles on health, hygiene, character, religion, education, and the preservation of the home. It tells how to beautify the home and make it attractive. It contains several pages of short stories and several noted serials during the year.

Regular price, 25 cents per year.

McCall's

McCall's Magazine contains from 80 to 124 pages each month and is one of the greatest Woman's Fashion Journals in America. It contains special articles on dressmaking, millinery, fancy work, home decorations and household management. It illustrates 50 to 60 fashion designs every month, some in colors, besides containing numerous other attractive features which make this a favorite magazine in over one million homes.

Regular price, 50 cents a year.

THIS IS MY OFFER

Send me only $1.50 for three full years' subscription to The Homestead and I will send you, without additional char., McCall's, Today's and Home Life, each one for a full year. Remember, the offer is good only till December 1, 1913. We cannot supply you with the combination after that date. Wrap a fifty-cent piece in a one-dollar bill, attach it to the coupon below and mail it to me at once, at my risk. Do this now, before you forget it.

divine constancy to Moses is cited as a pledge of similar constancy to Joshua. Only he is to be strong and courageous. These are not vague terms. It is not strength and firmness in general Joshua is to have, but strength in the hands and firmness in the knees. He is to be strong to grasp and firm-kneed to withstand hostile assault. And the source of strength is found in the Scriptures. It is to be Joshua's meditation day and night. It being the man of his counsel, he will have good success. He is not to be dismayed, for the constancy of the Divine Presence is assured.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

4650 Ladies' House Dress.—The dress we illustrate is one of the simplest to design. It has Gibson tucks at the shoulders in both front and back and these extend all the way to the waist. The closing is at one side of the waist. The sleeves are the plainest of leg o' mutton shape and full length.

The pattern 4650 is cut in sizes 32 to 42 inches bust measure. Medium size requires 11¾ yards of 24-inch material. Price of pattern ten cents.

6354 Misses' and Small Women's Dress.—A pretty design for a one-piece dress shows the new yoke effect on the blouse and a plain smart skirt. The blouse is tucked at the joining with the yoke front and back. The skirt has an inverted box plait down the front and back stitched about to the knee and left free at the bottom for ease in walking.

The pattern 6354 is cut in sizes 14, 16 and 18 years. Medium size requires 3⅞ yards of 44-inch material. Price of pattern ten cents.

4773 Dolls' Set.—No matter what the season a little girl is sure to be glad to make a new dress for her doll and the set herewith pictured provides for a neat frock and long cape.

The pattern 4773 is cut in sizes for dolls measuring from 14 to 26 inches in length. For an 18-inch doll it requires for the dress ¾ yard of 44-inch material and for the cape ½ yard of 36-inch goods. Price of pattern ten cents.

6343 Ladies' Shirt-Waist. This shirt-waist could easily be made in an hour, the lines are so simple. There is a slight droop to the shoulder and the sleeves fit smoothly into the armhole. Silk, madras or linen can be used for this waist with the collar and cuffs of contrasting material. The long or short sleeves can be used.

The pattern 6343 is cut in sizes 34 to 42 inches bust measure. Medium size requires 1⅝ yards of 44-inch material. Price of pattern ten cents.

4635 Boys' Shirt-Waist Suit.—Every boy needs a shirt-waist suit and here is an excellent pattern for making such a garment. The blouse is made with a back yoke and with a removable collar. The trousers can be made with or without a fly, and with either leg bands or elastics.

The pattern 4635 is cut in sizes 4, 6, 8, 10 and 12 years. Size 8 years requires 2¾ yards of 36-inch material. Price of pattern ten cents.

4784 Girls' Dress.—An excellent model for a school dress is her presented. The garment closes front, buttoning all the way f neck to the hem. The waist i

popular Gibson type and the skirt is the favorite kilted model so much in demand for the small girl. Linen, percale or chambray can be used for this dress.

The pattern 4784 is cut in sizes 6, 8, 10 and 12 years. Medium size requires 3¼ yards of 36-inch material. Price of pattern ten cents.

THE YOUNG FOLKS

For the best letter received each week we offer twenty-five cents; second best, a silver badge; third best, a pansy badge. Send letters to Rural Route, No. 56, Box 21, Philo, Illinois.

REPORT OF AUTUMN LEAF CONTEST.

Fifty bright-eyed folks hunted for autumn leaves and sent the prettiest to Aunt Mary. Some of them were very beautiful; some not so pretty were neatly arranged; all in all, you did very nicely.

It was hard to decide on one out of fifty, so we are awarding three prizes, and a lot of honorable mentions. The promised book goes to Harry Jackson, age 13, Illinois. His leaves were sassafras, soft maple and black oak. A silver badge is sent to "Princess Pine," age 11, Nebraska. Her leaves were sumac, Virginia creeper and wild grape. A silver badge is also sent to Mabel Nygaard, age 12, Nebraska. Her leaves were plum, wild rose and gooseberry.

Honorable mention (and a pansy badge) is given to each of the following: Alma Miller, Bernice Merle Shurtleff, Bernice Wood, Brownie, Bruce Bridwell, Cecil Yearous, Della Reutter, Ellen Anderson, Frances Wright, Hazel French, Hazel Wright, Herbert H. Callaway, Ida Rohlfing, James Francis Egan, Jennie M. Lundin, Katie Noyes, Lena Leigh, Lottie Young, Marion Jensen, Martha Harr, Mary Robison, Maude E. Belgard, Negah, Ruby Dunlap, Ruth Leigh, Ted Park.

"There is one thing which I often think of as I gaze at the autumn leaves," writes Adie Blondheim. "The red hue means purity of our hearts; the yellow or gold is for wealth; and the brown is for the health that shines on our hands and faces."

Auntie loves to think of trees and shrubs as God's children, and whether dressed in green or gold and red, with flowers or fruits or nuts, they daily repeat the message "God is Love."

Report of the Spell Down.

Three hundred young people wrote the list of misspelled words in what they hoped was the correct spelling, and sent them to Aunt Mary. Three hundred young people hope to win the game "Roodles." But, alas, only three sent perfect lists, and two hundred and ninety-seven must be disappointed. However, it did you good to try, and as Sarah Myers says, "It will be a benefit to learn to spell them, even if I do not get the game, and thank you for calling our attention to them."

As there are three whole lists that are perfect, we shall give games to all three; Carl Johnson, age 10, Kansas; Maybelle Fann, age 9, Wisconsin; and Eunice B. Ling, age 11, Iowa.

The correct spelling of the words follows: August, aunt, across, almost, believed, because, buggy, believe, before, Christmas, converts, didn't, ditch, died, horizon, heard, having, enjoyed, laid, medicine, ninth, ninety, o'clock, received, remember, recess, Shetland, since, stopped, succeeded, study, their, very, worthless, whose.

Ever so many forgot to give Shetland a capital letter. Worthless proved a stumbling block to many. Since and converts were called sense and comforts as often as not, and so on. This was a pretty hard test, as there was no way of telling what the words were intended to be, excepting by guessing.

However, Aunt Mary is glad to hear from so many, and to note your interest in spelling, which is a very important study.

STORING OF WINTER VEGETABLES.

To the Editor of The Homestead:

The storing of winter vegetables is economical and desirable. In the fall enough vegetables go to waste from the average farm garden to supply the table during the entire winter. The task of storing is not difficult if one has a knowledge of the conditions best suited to storage and is willing to perform a small amount of labor.

A dry, well-aired, not too dark, frost-proof room, cellar or sod house will serve the purpose. The most favorable temperature is not over 50 degrees F. Celery, cabbage and sweet potatoes should be stored in the coolest part of the room. Racks should be adjusted on which to place the storage boxes or barrels. This avoids the dangers of overheating, excess moisture and prevents decay. All vegetables should be gathered before the frost, sorted, dried thoroughly before packing. For long storing reserve those of most perfect formation and firm texture. Each root or tuber should be placed a few inches apart in alternate layers with clean, dry sand. In removing those for use, care should be taken each time to recover any that may be exposed. The earth for packing should be clean and dry, and should be collected in dry summer season rather than after the heavy fall rains. Carrots, sweet potatoes, beets, turnips, parsnips, cabbage, salsify, celery keep well stored by this method.

Vegetables less perfect in form, less firm in texture should be reserved for immediate use. These may be stored in barrels or boxes with latticed bottoms.

Sweet potatoes should be well dried, wrapped in paper, packed in sand as indicated, and kept in coldest part of store room. Celery should be taken from ground on a clear day, transferred to boxes of clean dry sand. The tops and leaf portions should not be covered, but the bleached part should be well packed in the sand and placed in the coldest part of the storage room. Cabbage and cauliflower will keep for a long time if gathered and stored with the head and roots intact. The large outside leaves should be removed. Each head should be surrounded with clean dry straw and placed downward a few inches apart. Pack and store the same as celery.

If desired, parsnips and salsify may be allowed to remain in the ground all winter. They should be covered in the fall with clean straw. After the early spring thaw they may be removed, washed and stored in a cool place.

Parsley and water cress may be transplanted to flower pots or boxes and kept in good growing condition throughout the winter.

Tomatoes may be stored very late in the fall if the entire vine is carefully pulled up and hung over racks in the coolest part of the frost-proof room or the fruit may be picked from the vines and placed on racks several inches apart. By these methods a large portion of the green tomatoes will ripen and keep indefinitely.

If a frost-proof storage place is not available, the trench method is satisfactory for storing cabbage, turnips, carrots, parsnips, salsify, beets, etc. A well-drained location should be selected and the trench should be about seven feet deep. Clean straw should be filled in to the depth of about one foot. The trench may be divided in sections for each variety of vegetables. The cabbage should be arranged as previously mentioned. In filling the trench the earth should be firmly packed and well heaped. Two boards nailed together lengthwise to form a sloping roof should be placed over the top to shed rain and snow. Vegetables stored in a trench may freeze in a severe winter, and remain frozen until the spring thaw. The gradual extraction of the frost leaves the vegetable uninjured, but a sudden thaw will greatly impair the texture and flavor.

The cost of vegetables grown out of season in greenhouses and available in all markets during the winter and early spring months is so high as almost to prohibit their use by the people of moderate means, except as a luxury. Therefore, if more attention were paid in each home to the storage of a generous supply of winter vegetables the daily meals would be more easily planned, the daily diet be made more wholesome and one of the problems in the high cost of food supply would be practically overcome.
